MEMORY

DRAM memory modules

We build our modules from start to finish — designing, manufacturing and testing all the DRAM ourselves before assembling the modules and testing again. From high-performance SODIMMs to high-density RDIMMs, you can depend on our quality and reliability.

RDIMM

RDIMM memory is designed for a variety of applications, including enterprise servers and data centers while delivering high performance and stability.

Micron DDR5: Next-generation memory transforming data into insight

Watch how Micron DDR5 addresses the memory bandwidth-per-CPU challenge and transforms the explosion of available data into insight.

Micron DDR5: Offering more than 2X the effective bandwidth

DDR5 offers up to 2X the effective bandwidth when compared to its predecessor DDR4, helping relieve this bandwidth-per-core crunch.

Accelerating FinTech with MRDIMM

Micron's MRDIMM@8800 MT/s delivers high memory bandwidth, low latencies at high bandwidth and high energy efficiency making it a compelling choice for Financial workloads.

35.2 milliseconds to market insight

Micron MRDIMMs, together with Intel processors, set a new world record on the STAC-A2 benchmark for financial risk analysis. But this result isn't just an impressive speed. In this blog post we will explore how this world record is a key data point in a broader story: memory is becoming more visible as a performance lever in financial market infrastructure.

Inside 1α — world's most advanced DRAM process technology

Micron announced that we're shipping memory chips built using the world's most advanced DRAM process technology: "1α" (1-alpha).

[Read inside 1α blog →](#)

Micron DDR5 client module features

DDR5's increased memory bandwidth, channel throughput and power regulation enable multicore CPUs to meet increased client computing needs.
