

Exhibit 63

Full Stack AI Memory Creator

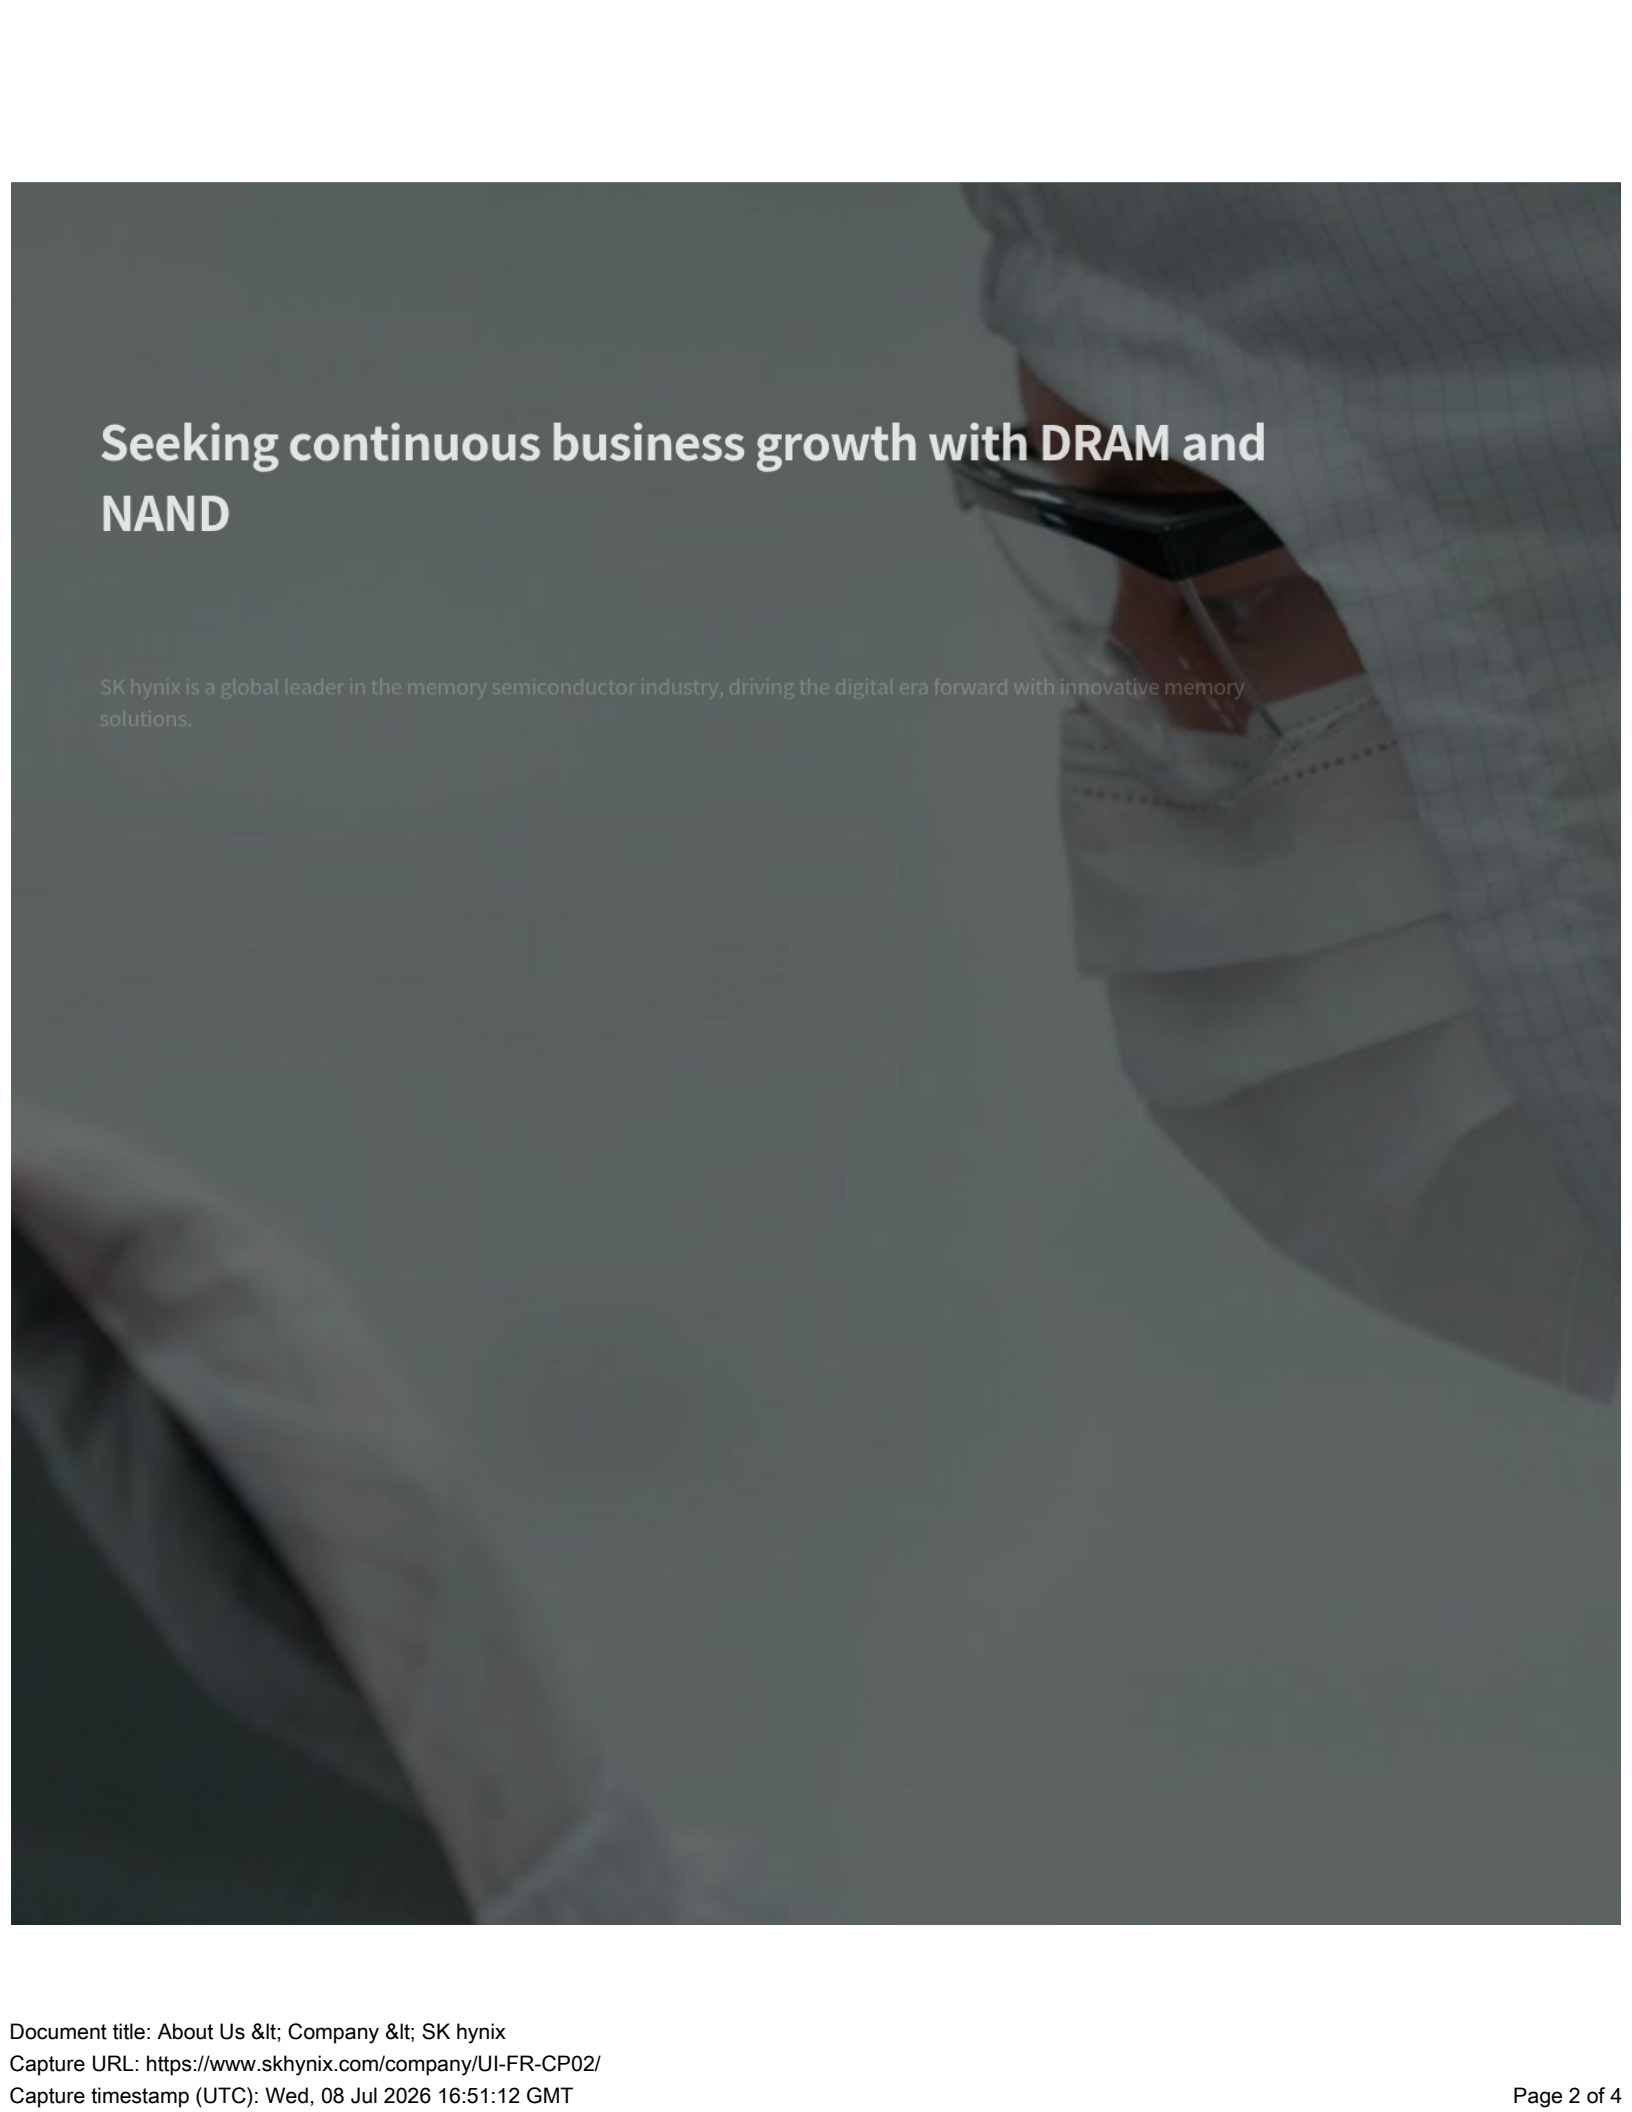

Pioneering Memory Innovation in the AI Era

With our global technology leadership, SK hynix strives to deliver greater value to all stakeholders, including customers, partners, investors, local communities, and employees. We are strengthening our ESG management to create more social value and ensure sustainable growth, moving beyond a business model focused solely on economic benefits.

As the AI era accelerates, SK hynix is evolving from a memory supplier into a “Full Stack AI Memory Creator.” This represents our commitment to go beyond meeting customer demands — to become a co-designer, co-architect, and ecosystem partner that drives breakthroughs in AI computing together with our customers. By integrating advanced DRAM and NAND technologies, SK hynix will continue to build the core value of the AI era through its full-stack AI memory innovations.

Company name	SK hynix
CEO	Kwak Noh-Jung
Date Began Semiconductor Business	February 1983
Area of business	Manufacture and sales of semiconductor devices
Address of headquarters	2091, Gyeongchung-daero, Bubal-eup, Icheon-si, Gyeonggi-do, Korea
Products and services	· Memory semiconductor DRAM, NAND Flash, MCP(Multi-Chip Package), etc.

Seeking continuous business growth with DRAM and NAND

SK hynix is a global leader in the memory semiconductor industry, driving the digital era forward with innovative memory solutions.

Business Strategy

- **HBM**

Consolidate our position as a leading HBM provider by strengthening product/tech competitiveness

- **eSSD**

Proactively prepare high-bandwidth, high-capacity eSSD product line-up

- **Next gen product**

Prepare next generation products/technologies such as CXL/PIM that can enhance AI system performance

- **DRAM**

Lead the industry with the best in class technologies in fine process and performance

- **NAND**

Realize high capacity and high performance by leading the development of the highest NAND stacking technology

Product Leadership fulfilling customer needs

- **DRAM**

Reinforce product and technological competitiveness by providing high-performance memory solutions optimized to various applications

- **NAND**

Technology development and product line up aligned with market/technology changes

Sustainable Technologies for the future

- **Product development**

Continue developing energy efficient products, especially for data center, that use less power per unit processing capacity

- **Environmental impact reduction**

Continue efforts to develop technologies that can reduce environmental impact such as raw/subsidiary material reuse and water treatment solutions
