Figure 1. Wiring Assignments

Ex. CC-89 (Samsung DDR5 RDIMM Datasheet) at 7–8.

The memory slot connector includes a set of power conduits, a set of data conduits, and a set of address and control conduits for transfer of corresponding signals between the system board and the DIMM:

| Claim 1                                                                                                                                                     | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>[1.a] a printed circuit board (PCB) having edge connections configured to fit into the memory slot connector of the system board, the PCB including:</p> | <p>The Accused Instrumentalities each comprise a printed circuit board (PCB) having edge connections configured to fit into the memory slot connector of the system board. Analysis below uses Samsung's RDIMM format as an example, but MRDIMMs would operate in materially the same way in all relevant part. Ex. CC-13 (JEDEC Press Release) (JEDEC noting that other planned features for MRDIMMs include "Utilization of standard DDR5 DIMM components including DRAM, DIMM Form Factor &amp; Pinout, SPD, PMIC, and TS for ease of adoption"; "Efficient I/O scaling using RCD/DB logic process capability"; and "Leverage existing LRDIMM ecosystem for design and test infrastructure"); Ex. CC-145 (DDR5 MRDIMM: A Transformational Evolution For DDR5 DIMM) ("DDR5 MRDIMM is pin compatible with traditional DIMM, and it can be used in the same DIMM slots that are used for DDR5 RDIMMs").</p> <p>For example, a Samsung DDR5 based DIMM comprises a printed circuit board (PCB) that comprises edge connections, as shown below:</p> <div style="text-align: center;">  </div> <p>Ex. CC-117 (Samsung 5600MHz PC5-44800) (annotated).</p> |

**U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)**

| Claim 1 | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>and the host system.” <i>See, e.g.</i>, Ex. CC-21 (EDTX Trial Tr. Day 2, 4 (2023)) at 333:9–12 (“Q. And can you tell us about claim 16 of the ’918 Patent? A. So here’s claim 16 of the ’918, and a claim analysis is just where I actually look at the claims and compare it to exactly how the products operate, the accused products.”). Netlist also asserted claim 1 of the ’918 patent, which recites, among other limitations, “a printed circuit board (PCB) having an interface configured to fit into a corresponding slot connector of a host system, the interface including a plurality of edge connections configured to couple power, data, address and control signals between the memory module and the host system” and “at least one circuit coupled between a first portion of the plurality of edge connections and the plurality of SDRAM devices, the at least one circuit operable to (i) receive a first plurality of address and control signals via the first portion of the plurality of edge connections, and (ii) output a second plurality of address and control signals to the plurality of SDRAM devices, . . . .” <i>Id.</i> at 342:8–9 (“Next, I turned to claim 1 of the ’918. Now, as we’ll see, claim 1 only applies to the RDIMM products.”).</p> <p>Samsung did not dispute these limitations. <i>Id.</i> at 885:24–886:5 (“With regard to the ’918 claims, I have determined that—that these claims are not infringed by the Samsung DDR5 product, at least for the reason that there is a limitation in each of the independent claims directed to the requirement of a converter circuit structure, and that is not found on any of these Samsung DDR5 products. And what’s being pointed to is a linear drop-out regulator, but that’s not a converter circuit.”).</p> |

# U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1                                                                                                                                                                                                                                                                                                                                                           | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>[1.a.1]</b> a first set of edge connections configured to be electrically connected to the set of power conduits and operable to deliver to the DIMM power from power rails of the system board via the set of power conduits, wherein the power delivered to the DIMM from the power rails of the system board is the only power received by the DIMM;</p> | <p>The printed circuit board includes a first set of edge connections configured to be electrically connected to the set of power conduits and operable to deliver to the DIMM power from power rails of the system board via the set of power conduits. Additionally, the power delivered to the DIMM from the power rails of the system board is the only power received by the DIMM.</p> <p>For example, Samsung illustrates that power is supplied to the DIMM via DIMM slots through the edge connections. <i>See</i> Ex. CC-104 (Optimized DDR5 DIMM Solutions). And this is the only power received by the DIMM.</p> <div data-bbox="930 760 1455 1286" data-label="Diagram"> <p>The diagram, titled "DDR5 DIMM", illustrates the power delivery architecture. On the left, a "Power Supply" block provides two input lines to a "DIMM Slot": "VIN Bulk (12V)" and "VIN MGMT (3.3V)". The "DIMM Slot" is represented by a vertical yellow bar. To the right of the slot is a teal-colored DIMM module. Inside this module, a "PMIC" (Power Management IC) is shown at the top, receiving power from the slot. Below the PMIC are three "DRAM" modules. Arrows indicate the power flow from the PMIC to the DRAM modules, labeled as "VPP", "VDD", and "VDDQ".</p> </div> <p>Ex. CC-104 (Optimized DDR5 DIMM Solutions).</p> |

# U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

## Claim 1

## Evidence of Use

As another example, as the Samsung DDR5 RDIMM Datasheet shows, the pin assignments for the edge connections of the PCB include a first set of edge connections (Vin\_Bulk, Vin\_Mgmt, and VSS) configured to be connected to power conduits.

|         | <div data-bbox="583 316 1354 633" data-label="Diagram"> </div> <p data-bbox="556 690 1879 803"><i>Id.</i> at 10 (showing inputs from VIN_BULK and VIN_MGMT from the board edge to PMIC and then output from PMIC to DIMM components); <i>see also id.</i> at 36, 32, 28, 24. As shown above, the only inputs to the PMIC are VIN_BULK and VIN_MGMT received from the host via the edge connections.</p> <p data-bbox="556 836 1879 1421">Moreover, Netlist previously asserted claim 16 of U.S. Patent No. 11,016,918 against Samsung’s DDR5 DIMMs, which recites, among other limitations, “a printed circuit board (PCB) having an interface configured to fit into a corresponding slot connector of a host system, the interface including a plurality of edge connections configured to couple power, data, address and control signals between the memory module and the host system.” <i>See, e.g.,</i> Ex. CC-21 (EDTX Trial Tr. Day 2, 4 (2023)) at 333:9–12 (“Q. And can you tell us about claim 16 of the ’918 Patent? A. So here’s claim 16 of the ’918, and a claim analysis is just where I actually look at the claims and compare it to exactly how the products operate, the accused products.”). Netlist also asserted claim 1 of the ’918 patent, which recites, among other limitations, “a printed circuit board (PCB) having an interface configured to fit into a corresponding slot connector of a host system, the interface including a plurality of edge connections configured to couple power, data, address and control signals between the memory module and the host system” and “at least one circuit coupled between a first portion of the plurality of edge connections and the plurality of SDRAM devices, the at least one circuit operable to (i) receive a first plurality of address and control signals via the first portion of the plurality of edge connections, and (ii) output a second plurality of address and control signals to the plurality of SD RAM devices, . . . .” <i>Id.</i> at 342:8–9 (“Next, I turned to claim 1 of the ’918. Now, as we’ll see, claim 1 only applies to the RDIMM products.”).</p> |

**U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)**

| Claim 1 | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>Samsung did not dispute these limitations. <i>Id.</i> at 885:24–886:5 (“With regard to the ’918 claims, I have determined that—that these claims are not infringed by the Samsung DDR5 product, at least for the reason that there is a limitation in each of the independent claims directed to the requirement of a converter circuit structure, and that is not found on any of these Samsung DDR5 products. And what’s being pointed to is a linear drop-out regulator, but that’s not a converter circuit.”).</p> |

# U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1                                                                                                                         | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |             |                          |                                      |                        |                                         |                              |                                                            |                              |                                                            |                                |                                                           |                                |                                                           |          |                                       |          |                                       |     |                              |     |                         |       |                             |

## U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

Claim 1

Evidence of Use

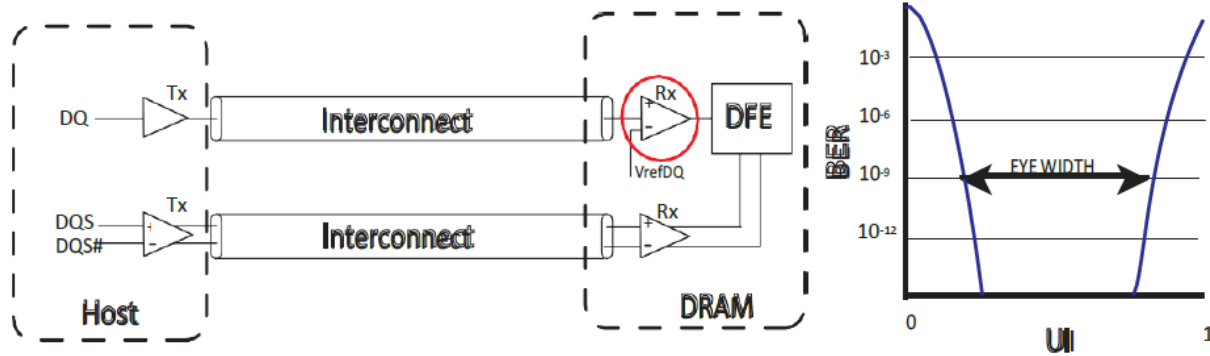

|                          |                  |     |                                                                                                                                                                                                                                                                                                                   |
|--------------------------|------------------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DQ[31:0]_A<br>DQ[31:0]_B | Input/<br>Output | VDD | Data Input/ Output: Bi-directional data bus. If CRC is enabled via Mode register then CRC code is added at the end of Data Burst. Any DQ from DQ0-DQ3 may indicate the internal Vref level during test via Mode Register Setting MR4 A4=High. Refer to vendor specific data sheets to determine which DQ is used. |
| CB[7:0]_A<br>CB[7:0]_B   | Input/<br>Output | VDD | ECC Check Bits Input/ Output: Bi-directional data bus.                                                                                                                                                                                                                                                            |
