

# **Exhibit 102**

**U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)**

**EXHIBIT 102**

**Domestic Industry Claim Chart for Claims of U.S. Patent No. 12,373,366 (the “’366 Patent”) Based on Samsung Practicing ’366 Products**

As shown in the chart below, the Samsung Practicing ’366 Products, which include Samsung DDR5 RDIMMS and MRDIMMS, practice at least claim 1 of the ’366 patent. It should be understood that Netlist’s contentions are not limited to these products but instead encompass any and all reasonably similar products and components that practice the claims in the same or similar manner as discussed below. Netlist may supplement, modify or amend its contentions under the doctrine of equivalents based on any claim constructions, additional information obtained through formal discovery or other means, and/or based on other circumstances including any assertions by Respondents that the Samsung Practicing ’366 Products do not practice the ’366 patent as to any one or more of the limitations in the claim(s) below.

To the extent Respondents contend that any differences are alleged to exist between the asserted claims below and the Samsung Practicing ’366 Products, such differences are insubstantial and the Samsung Practicing ’366 Products perform substantially the same function, in substantially the same way, to yield substantially the same result, and therefore the Samsung Practicing ’366 Products practice the claims below under the doctrine of equivalents. Netlist may supplement, modify or amend its contentions under the doctrine of equivalents based on any claim constructions, additional information obtained through formal discovery or other means, and/or based on other circumstances including any assertions that the Samsung Practicing ’366 Products do not satisfy the technical domestic industry by Respondents as to any one or more of the limitations in the claims below.

## U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>[1.pre] A dual in-line memory module (DIMM) configured to fit into a memory slot connector of a system board of a computer system, the memory slot connector including a set of power conduits, a set of data conduits, and a set of address and control conduits, wherein data signals are transferred between the system board and the DIMM via the set of data conduits, and address and control signals are delivered from the system board to the DIMM via the set of address and control conduits, the DIMM comprising:</p> | <p>The Accused Instrumentalities (such as a Samsung EC8 RDIMM or EC8 MRDIMM) are each a dual in-line memory module (DIMM). Analysis below uses Samsung’s RDIMM format as an example, but MRDIMMs would operate in materially the same way in all relevant parts. Ex. CC-145 (DDR5 MRDIMM: A Transformational Evolution For DDR5 DIMM) (“DDR5 MRDIMM is pin compatible with traditional DIMM, and it can be used in the same DIMM slots that are used for DDR5 RDIMMs”); Ex. CC-13 (JEDEC Press Release) (JEDEC noting that other planned features for MRDIMMs include “Utilization of standard DDR5 DIMM components including DRAM, DIMM Form Factor &amp; Pinout, SPD, PMIC, and TS for ease of adoption”; “Efficient I/O scaling using RCD/DB logic process capability”; and “Leverage existing LRDIMM ecosystem for design and test infrastructure”).</p> <p>Examples of Samsung DIMMs are shown below. <i>See, e.g.</i>, Ex. CC-116:</p>  <p>The image shows two Samsung DDR5 EC8 RDIMM memory modules. The top module is a full-length DIMM with a green PCB and gold-plated pins. The bottom module is a half-length DIMM with a white label. Both modules feature multiple black DRAM chips and a central white label with technical specifications and a QR code. The label on the bottom module reads: SAMSUNG, DDR5 EC8 RDIMM, 80CE04232645DAAD41, TOFK000, 64GB 2Rx4 PC5-4800B-RA0-1010-XT, Vietnam, M321R8GA0B80-CQKZJ, RE1MR6G. The label also includes a CE mark, a UKCA mark, and a QR code.</p> |

|         | <p>Each accused Samsung DIMM is configured to fit into a memory slot connector of a system board of a computer system. For example, one Samsung web site illustrates that “DDR5 DIMM” is coupled to a “DIMM slot.” <i>See</i> Ex. CC-104 (Samsung Tech Blog, “Optimized DDR5 DIMM Solutions: Powering Leading-Edge Server Memory Modules” (“Optimized DDR5 DIMM Solutions”)); <i>see also, e.g.</i>, Ex. CC-145 (DDR5 MRDIMM: A Transformational Evolution For DDR5 DIMM) (“DDR5 MRDIMM is pin compatible with traditional DIMM, and it can be used in the same DIMM slots that are used for DDR5 RDIMMs”).</p> <div data-bbox="898 651 1512 1258" data-label="Diagram"> </div> <p>As another example, Samsung’s web site advertises various dual in-line memory modules “for a wide range of applications.” Ex. CC-95 (Samsung DRAM Modules). For instance, Samsung advertises registered DIMMs (“RDIMMs”), including ones with ECC capability, as suitable for</p> |

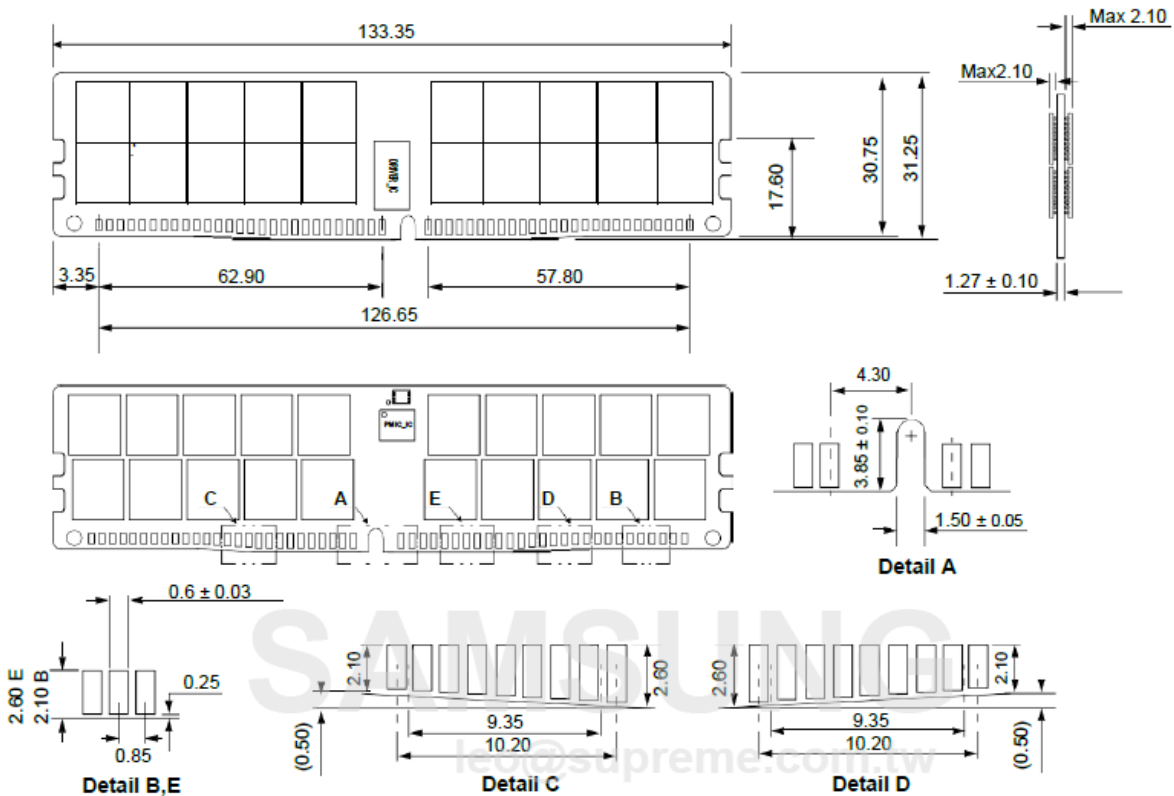

## U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1                                                                                                                                                                                                                                                                                                               | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                       |                                                                                     |

CC-89 (Samsung DDR5 RDIMM Datasheet) at 96:</p> <p data-bbox="604 440 1608 479"><b>19.4 4Gx4 based x80 Module (2 Ranks) - M321R8GA0BB0</b></p> <p data-bbox="1654 500 1759 524">Units : mm</p>  <p>The technical drawing illustrates the dimensions of a DDR5 RDIMM module. The top view shows a rectangular module with a total length of 133.35 mm and a total width of 31.25 mm. The module is divided into two ranks, each containing four memory chips. The bottom view shows the module with labels A, B, C, D, and E indicating specific components or features. Detailed views A, B, C, D, and E provide further dimensions for specific components, such as the height of the module (17.60 mm), the width of the module (30.75 mm), and the dimensions of the memory chips (e.g., 2.60 mm, 2.10 mm, 0.85 mm, 0.25 mm). The drawing also includes a large 'SAMSUNG' watermark and a URL 'le@supreme.com.tw'.</p> |

## U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1 | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <div data-bbox="571 302 1635 849"></div> <p data-bbox="571 911 1860 1279">The memory slot connector on the host system's motherboard includes a set of power conduits, a set of data conduits, and a set of address and control conduits, wherein data signals are transferred between the system board and the DIMM via the set of data conduits, and address and control signals are delivered from the system board to the DIMM via the set of address and control conduits. For example, as Samsung's own datasheet (Samsung DDR5 RDIMM Datasheet) illustrates, the host computer and the DRAMs on the DIMMs have various interconnects for data (DQ) signals, control/address signals and power signals. Each interconnect provides a respective conduit to conduct the corresponding signals between the host and the DIMM. <i>See</i> Ex. CC-89 (Samsung DDR5 RDIMM Datasheet) at 7–9.</p> |

U.S. Patent No. 12,373,366 Domestic Industry Claim Chart (Samsung)

| Claim 1 | Evidence of Use                                                                                                                                                                                                                                                                                                                                                                                                     |

|         |  <p>The diagram illustrates the internal architecture of a Samsung DDR5 RDIMM. It is divided into two main sections: 'Front' and 'Back'.<br/> <b>Front View:</b> Shows two data buffers, TS00 (containing D01, D02, D03, D04, D05) and TS01 (containing D11, D12, D13, D14, D15). These buffers are connected to a central RCD (Refresh Control Driver) block. Blue lines indicate the connection of Address, Control, and Clock signals between the buffers and the RCD.<br/> <b>Back View:</b> Shows two data buffers, D06-D10 and D16-D20. Below these buffers are the PMIC (Power Management IC) and SPD/HUB (Serial Presence Detect/Hub) components. Blue lines connect the buffers to the PMIC and SPD/HUB, and also show the signal paths for Address, Control, and Clock lines.<br/> <b>Legend:</b> A blue line is defined as 'Address, Control and Clock lines'.</p> <p>Ex. CC-89 (Samsung DDR5 RDIMM Datasheet) at 25 (each blue line includes multiple signal lines and the lines from the edge connection to the RCD are coupled to the respective control/address and clock conduits for transmitting respective address, control and clock signals); <i>see also id.</i> at 21, 29, 33.</p> |

Claim 1

Evidence of Use

Ex. CC-73 (JEDEC PS-005B) at 13, Figs. 6–7 (annotated) (illustrating an edge connection on the DIMM being electrically connected with a corresponding pin on the memory slot connector).

The memory slot connector of the system board comprises conduits as illustrated above that correspond to Samsung DDR5 DIMM pin assignments, such as the one illustrated in Figure 1 in Samsung DDR5 RDIMM Datasheet. Each conduit of the memory slot connector corresponds to a pin number and associated signal name for power, data, and address and control conduits.
