Introduction

North America's grid expansion, renewable integration, and industrial electrification are driving unprecedented demand for dependable transformer partners. To meet this accelerating market, Unimacts stands as a manufacturing-first leader with deep global capabilities, proven performance, and a growing U.S. footprint.

Unimacts **manufactures and supplies transformers** for the U.S. market through a globally integrated production network, supported by advanced facilities and mature quality systems. With over **20 years of engineering heritage**, a strong legacy in industrial and solar manufacturing, and more than **\$1B in products supplied to U.S. customers**, Unimacts is positioned as a forward-leaning partner for utilities, developers, EPCs, and industrial enterprises.

A critical part of this strength comes from Kryfs—India's leading CRGO core and transformer manufacturer—whose decades of technical expertise **enhance Unimacts' depth, reliability, and competitiveness** in the global transformer space.

Contact Our Manufacturing Expert

Partner with Unimacts for high-performance transformers designed for U.S. utilities, developers, and industrial projects. Leverage our global capabilities, engineering expertise, and strong U.S. presence. Contact us to define your next transformer requirement.

Unimacts: A U.S.-Anchored, Globally Enabled Transformer Manufacturer

Unimacts serves as a central hub for transformer manufacturing and delivery across the American power sector. Headquartered in Sloan, Nevada, and operating across four continents, the company brings together U.S. commercial presence with world-class global production capabilities.

How the Unified Model Works

- **Unimacts:** U.S.-based operations, customer engagement, delivery management
- **Kryfs:** 40+ years of transformer manufacturing, CRGO core capability, Tier-1 credentials
- **Zetwerk:** Global supply-chain infrastructure, logistics optimization, compliance readiness

This creates a **single-source, manufacturing-driven solution** for power, distribution, dry-type, pad-mounted, inverter-duty, and oil-filled transformers.

With 7 U.S. facilities, 200+ employees, and an expansive renewable and industrial manufacturing portfolio—including solar modules, tracker components, torque tubes, precision components, and foundations—Unimacts brings diversified industrial capabilities that directly enhance its transformer operations.

Why Kryfs Matters

- **40+ years of transformer expertise** spanning cores, distribution, and power units
- **50,000 MT per annum** CRGO processing capacity
- **Tier-1 approvals** from NTPC, POWERGRID, Siemens, Hitachi, and major global utilities
- Deep technical credibility and manufacturing rigor
- Proven experience across global transformer supply chains

This engineering foundation enables Unimacts to deliver transformers that meet stringent U.S. performance, safety, and utility standards—while maintaining delivery reliability and cost efficiency.

Together, Unimacts and Kryfs create a **globally competitive, quality-centric transformer manufacturing platform**, purpose-built for U.S. power infrastructure growth.

Comprehensive Transformer Portfolio for Modern Power Systems

Unimacts manufactures transformers across six major categories, addressing both traditional grid requirements and emerging renewable needs.

Distribution Transformers (10–500 kVA)

Designed for urban grids, commercial networks, and industrial feeders. Engineered for low losses, optimized thermal behavior, and long service life.

Power Transformers (Up to 500 MVA / 765 kV)

High-capacity units designed for transmission and utility-scale substations. Built with precision core construction, robust insulation, advanced OLTC systems, and global testing compliance.

Dry-Type Transformers

Ideal for sensitive indoor operations—data centers, industrial plants, high-rise projects—where safety, reduced maintenance, and environmental performance are critical.

Pad-Mounted Transformers

Utility-approved, compact, and secure for ground-level distribution and commercial development networks.

Inverter-Duty Transformers

Engineered to support solar PV plants, battery energy storage systems (BESS), and renewable interconnections. Built for harmonics, switching stresses, and variable generation profiles.

Oil-Filled Transformers

Reliable, durable, and tested for heavy industrial loads, substation environments, and high-stress operating conditions.

This comprehensive portfolio positions Unimacts as a versatile, full-spectrum transformer manufacturer for the U.S. market.

Manufacturing Excellence Supported by a Global Network

Unimacts' transformers are manufactured through a network of advanced facilities located across **India, Oman, and the UAE**, delivering end-to-end production capabilities.

**Integrated Manufacturing Includes:**

- CRGO slitting and core lamination
- Coil winding and conductor processing
- Tank fabricatio
- Vacuum drying, insulation, and oil processing
- Assembly and finishing
- Routine, type, and special testing
- Global logistics and port operations

These facilities have already delivered products to global utilities and OEMs, solidifying their credibility.

Engineering Backbone

Unimacts' transformer engineering team represents **300+ years of collective design experience**, ensuring that every unit aligns with modern grid expectations and project-specific requirements.

Solar Manufacturing Expertise Strengthens Transformer Performance

Unimacts' significant maturity in solar manufacturing directly enhances its transformer capabilities. The company's solar offering includes:

- Solar modules
- Torque tubes
- Tracker components
- Wire & cable
- Foundations

This experience enhances transformer manufacturing through:

Cross-Industry Synergies

- High-volume metal fabrication and QA systems
- Global renewable deployment experience
- Strong logistics management across North America
- ISO-grade quality frameworks applied to transformer production

This dual-industry strength positions Unimacts uniquely at the intersection of **renewables and power infrastructure**, an essential advantage for U.S. utilities and developers.

Delivery Excellence and Lead-Time Advantage

The industry is experiencing extended transformer lead times—often exceeding **30–36 months**. Unimacts addresses this challenge through its globally distributed model.

Unimacts Lead-Time Performance

- Significantly faster in delivery than market norms
- Flexibility across multiple global plants
- Risk-managed supply chain, minimizing tariff and duty exposure
- Component-level safe harbor procurement, enabling delivery of key items within **45 days** for U.S. renewable tax-credit qualification
- This execution model supports EPC schedule stability and long-term grid planning.

Conclusion

As the U.S. grid accelerates toward modernization and renewable integration, Unimacts delivers the manufacturing control, quality assurance, and delivery resilience essential for today's power infrastructure.

Partner with Unimacts for high-performance transformers manufactured for U.S. utilities, developers, and industrial projects. Leverage our global capability, engineering depth, and strong U.S. presence. Contact us to scope your next transformer requirement.

FAQs

1. Does Unimacts manufacture transformers?

Yes. Unimacts manufactures transformers through its global production network, delivering units across six major categories for the U.S. market.

2. How does Kryfs strengthen Unimacts' transformer capabilities?

Kryfs brings 40+ years of transformer expertise, CRGO core manufacturing, and Tier-1 utility approvals, significantly enhancing Unimacts' global technical depth.

3. Which industries does Unimacts serve?

Utilities, EPCs, renewable developers, industrial plants, data centers, and commercial power networks.

4. What lead times can Unimacts deliver?

Let's say, Distribution Transformers are delivered in 18–24 months, ahead of the industry average of 30–36 months. It may vary based on transformer project needs.

5. Does Unimacts support safe harbor procurement?

Yes. Key fabrications and components can be supplied within 45 days to support U.S. safe harbor requirements.
