Belfast

Project Description

The Belfast project is a 4.6-megawatt, ground-mounted, community solar facility operating in Belfast, Maine. The project became operational on October 16, 2024 and will help produce clean energy for hundreds of southern Maine households and businesses. Whether you're a homeowner or renter receiving electricity through Central Maine Power, you can take advantage of the many benefits this project has to offer by subscribing at no upfront cost. Maine residents are encouraged to sign up today to secure a spot on this solar project as spaces are filling up.

Interested In Subscribing To This Community Solar Project?

Visit our community solar website to see if you qualify for renewable energy savings.
