Lenovo Group Limited (SEHK:992) > Company Information

Business Description / Color Notes

Lenovo Group Limited, an investment holding company, develops, manufactures, and markets technology products and services. It operates through Intelligent Devices Group, Infrastructure Solutions Group, and Solutions and Services Group segments. The company offers commercial and consumer personal computers, servers and workstations, and smartphones, as well as laptops, desktops, tablets, monitors, and accessories and software. It also provides consulting, deployment, managed, support, and security services. In addition, the company manufactures and distributes IT products, computers, computer hardware, and peripheral equipment; and offers IT, business planning, management, supply chain, finance and accounting, administration support, procurement agency, data management, intellectual property, and investment management services. Further, it is involved in the retail and service business for consumer electronic products and related digital services; development, ownership, licensing, and sale of communications hardware and software; and develops software and applications. It operates in China, the Asia Pacific, Europe, the Middle East, Africa, and the Americas. Lenovo Group Limited has a strategic alliance with Giralda Holding Conexion, S.L.U. to develop a joint end-to-end digital workplace offering that aims to challenge traditional IT outsourcing models. The company was founded in 1984 and is headquartered in Quarry Bay, Hong Kong.

Lenovo Group Limited Powers FIFA World Cup 2026 Operations And Strengthens AI-Driven Broadcast

Lenovo Group Limited (SEHK:992)

Jun-02-2026 06:00 AM

Client Announcement

Situation: Lenovo Group Limited announced it is delivering a near real-time AI-powered infrastructure platform for the FIFA World Cup 2026 to enable ultra-low-latency IPTV (Internet Protocol Television) video distribution in addition to the traditional cable and satellite broadcast, intelligent content delivery, and mission-critical decision-making across the event ecosystem and operations. As FIFA's Official Technology Command Partner, Lenovo Group Limited will deploy servers at the International Broadcast Center in Dallas, Texas, to help deliver the computing power, devices, and AI-driven solutions needed to bring every moment of every match to global audiences and support the most expansive broadcast operation in FIFA World Cup history. More than 17,000 Lenovo Group Limited and Motorola devices and 200+ engineers deployed across venues and Team Base Camp training sites will help ensure professional execution. Lenovo Group Limited's technology solutions have reduced latency within IPTV infrastructure for the global showpiece, with IPTV delays now under five seconds, enabling near real-time access to live match action and more synchronized viewing experiences. Lenovo Group Limited ThinkSystem SR635 V3 servers and technology will help manage massive volumes of live video data coming in from stadiums across North America and power FIFA's IPTV live feed by ingesting, processing, and distributing all match content in close to real-time via ten channels to over 1,000 screens throughout FIFA venues. Lenovo Group Limited's technology will be deployed at FIFA's Technology Command Center in Miami and the Tournament Operation Center for the duration of FIFA World Cup 2026. With the help of Lenovo Group Limited's enterprise solutions, FIFA's Technology Command Center and Tournament Operation Center will ensure tournament organizers are able to swiftly observe, and if needed, address operational matters across the tournament footprint. Lenovo Group Limited will manage complex on-premise edge computing, significantly reducing latency, where cloud-only solutions failed to meet broadcast requirements. During the World Cup, technologies powered by Lenovo Group Limited ThinkSystem servers, engineered for high-density, mission critical environments requiring massive throughput, and near real-time operational performance will support near real-time monitoring of stadium and tournament wide tech systems, live broadcast, streaming, and IPTV delivery, and rapid incident detection and issue resolution to minimize disruption and downtime. Lenovo Group Limited is enabling a more immersive and understandable viewing experience through AI-driven innovations. AI-enabled 3D player avatars provide clearer, real-time visualization of complex decisions such as offside calls. Built using advanced GenAI and real-world player data, these avatars are designed to help fans better understand the game as it happens. These avatars will also be an additional value input to support FIFA's Match Officials in their offside decision-making during matches. Lenovo Group Limited is deploying solutions designed to enhance safety, efficiency, and engagement. AI-driven navigation systems reduce congestion and improve movement across venues. AI-driven stabilized "Referee Views" deliver first-person perspectives with up to 50% less motion distortion. Immersive digital and holographic experiences create new ways for fans to engage with the game. Lenovo Group Limited will deploy the FIFA AI Pro platform, a next-generation AI-powered knowledge assistant delivering tactical insights to coaches, players, and analysts. Built using Lenovo Group Limited's AI Factory, the platform will be provided to all 48 teams competing in the tournament, democratizing access to elite-level analytics and helping level the competitive playing field. Lenovo Group Limited is offering a unique way to showcase their passion through a collection of FIFA Special Edition devices across its commercial, consumer, and gaming portfolios. Featuring exclusive FIFA World Cup 2026 branding and packaging, the lineup includes the Motorola razr FIFA World Cup 26th Edition, ThinkPad X9-14 Gen 1, ThinkPad X1 Carbon Gen 13 and 14, Yoga Slim 7i ultra Aura Edition (14", 11), Idea Tab, and the Lenovo Group Limited Legion Pro 7i (16", 10). These limited-edition models allow fans to carry a piece of the world's largest sporting event with them, long after the final whistle. The scale and complexity of these operations reflect Lenovo Group Limited's broader investment in sports technology. In March, Lenovo Group Limited launched a dedicated sports vertical designed to support organizations operating live, global, and mission-critical environments. By integrating AI infrastructure, edge computing, devices, and services into a unified model, Lenovo Group Limited is enabling sports organizations to move from fragmented systems to real-time, end-to-end operational control. As the Official Technology Partner of FIFA, Lenovo Group Limited is powering the biggest event in the history of humanity. FIFA trusts Lenovo Group Limited to deliver the tournament's end-to-end technology backbone from AI devices to infrastructure and solutions, to provide immersive and unique fan experiences and provide unprecedented access to data and analytics for the 48 competing teams.

Frore Systems Collaborates With Lenovo To Bring AirJet Mini To Lenovo Products

Lenovo Group Limited (SEHK:992)

May-28-2026 03:05 AM

Client Announcement

Situation: Frore Systems announced their collaboration with Lenovo's Innovation Accelerator to explore collaborating on future innovative products and solutions. AirJet Mini, the world's most advanced solid-state active cooling chip, will be appearing in Lenovo products. AirJet Mini removes thermal barriers, that have traditionally limited ultra-compact systems, allowing consumer products like super slim notebooks, tablets, and wearables to think longer, run faster, and operate in silence. AirJet solid-state active cooling will be brought to some of Lenovo's premium products, unlocking the new AI Thermal Stack that will enable the next generation of ultra-compact Edge AI devices. AirJet Mini continues to receive industry recognition in 2026 including at COMPUTEX with a Best Choice Award, and at CES with its third consecutive Innovation Award, underscoring continued industry recognition for solid-state active cooling technologies that remove thermal limits from next-generation AI systems. These honors recognize AirJet Mini's outstanding functionality, innovation, and market potential. Frore Systems' most powerful chip to-date, AirJet Mini G2 replaces conventional fans and heatsinks with a compact chip that removes 7.5W of heat. AirJet Mini G2 is designed specifically to support the shift as Edge AI evolves from simple inference toward AI reasoning models and Agentic services, workloads are becoming sustained and compute intensive. AirJet Mini G2 enables processors to sustain higher performance levels without throttling. AirJet Mini G2 Technical Highlights: Heat dissipation: 7.5 W (50% increase over AirJet Mini G1); Dimensions: just 27mm x 41.5mm x 2.65 mm, supporting ultra-compact form factors; Back pressure: 1,750 Pa (~10x higher than a fan), enabling dustproof and water-resistant devices; Noise level: 21 dBA, enabling silent operation; Design: solid-state, with no moving mechanical parts, delivering long life. AirJet Mini G2 generates high-velocity pulsating air jets that efficiently eject heat from compact enclosures, enabling sleek, light, ultra-compact, silent, vibration-free, dustproof, and water-resistant device designs. AirJet enhances performance across numerous devices from notebooks, tablets, Mini-PCs, smartphones, 5G WiFi Hotspots, cameras and SSDs, to consumer and industrial IOT devices. Frore Systems will be featured at Lenovo's Innovation Accelerator, Booth D08 Hall B at the Cotai Expo, The Venetian Macao, Macau China. Frore Systems will demonstrate Edge AI devices with AirJet and Airjet PAK solid-state active air cooling featuring Industrial edge IoT platforms, consumer products, and compute reference platforms. Additional demonstrations for AI Data Centers include LiquidJet Coldplates showcasing performance for cooling 1,950W NVIDIA Rubin, 600W/cm² extreme hotspot cooling, and LiquidJet Nexus, the integrated Coldplate system for ½ U compute trays. Experience the future of AI performance in the Frore Systems Computex Demonstration Room, June 2-5, 2026, Conference room 504C on the 5th floor of the Taipei Nangang Exhibition Center.

News**Spatial computing slims down for smart glasses****S&P Global Market Intelligence****Jun-11-2026 06:37 AM**

Data & Dimensions is a podcast dedicated to exploring the transformative evolution of the internet into immersive 3D virtual spaces. Guided by S&P Global's coverage of the Meta Platforms Inc.verse, where the tools and tech of video games shape the next phase of the internet into shared 3D virtual spaces, unlocking key points of interaction between humans, machines and data, enhancing and augmenting the physical world as much as replacing it. We delve into the multifaceted implications of this digital frontier for industry, enterprises, consumers and society in general.

Subscribe on Apple Podcasts and Spotify

Last year, we made a call that smart glasses are on track to surpass 20 million units shipped annually by 2029, and current market signals suggest that may have been a conservative forecast. As the category evolves, we thought it prudent to talk to one of its most experienced players.

Ralph Jodice, general manager of North America and global head of partnerships at XREAL Inc., walks through what his company has learned selling personal-display-style smart glasses and where the overall market is headed. The big news for XREAL is Project Aura's leap into full spatial computing via Android XR, effectively bringing much of the functionality of a Quest 3 or Apple Inc. Vision Pro into a pair of smart glasses.

Key topics include:

- # XREAL's position in the personal display market, smart glasses designed for periodic immersive gaming and productivity applications and how this segment sits astride all-day wearables like Meta Ray Bans.
- # The significance of Project Aura, combining lightweight glasses, dedicated compute, AI, and Google's Android XR platform unlocking a more robust AR experience.
- # How XREAL's control over component sourcing and manufacturing has enabled cost reductions despite broader supply chain inflation.
- # The role of developer ecosystems and platform scale in transitioning XR from niche enthusiast hardware to mainstream adoption.

Key topics include:

- # GameStop Corp. grew from \$757 million in revenue in 2000 to \$8.8 billion in 2008, riding the success of the PlayStation and Xbox eras.
- # Broadband expansion, smartphone adoption, digital storefronts and platforms steadily undermined the physical retail model.
- # How the Reddit Inc.-fueled 2021 short squeeze upended Wall Street, rattled hedge funds and changed the conversation around short selling and retail traders.
- # Ryan Cohen's arrival reshaped investor expectations around GameStop's e-commerce ambitions and capital strategy.

Ralph Jodice (cold open): 00:00:00

Lenovo Group Limited (SEHK:992) > News

So what we learned back in 2019 was we need to take some of the tech out of this, and we need to meet the customer where they're at. There weren't developers creating XR apps at scale like this in 2019.

Neil Barbour 00:00:25

Welcome to Data and Dimensions, a podcast at the intersection of entertainment, industry and interactivity. I'm Neil Barbour, an analyst with S&P Global Market Intelligence, Kagan. So let's talk about smart glasses. Last year, we made a call for this market to get to 20 million units shipped annually by 2029. And there are plenty of signals this year that this could end up being a conservative forecast. There are 3 primary subsegments that we're thinking about in smart glasses. The one currently doing most of the heavy lifting is audio-based smart glasses that can give you voice notifications, turn-by-turn directions and support media playback. The second is display-based all-day wearables that put visual notifications in your field of view. These are positioned as sort of a heads-up display that can minimize how many times you have to pick up your phone throughout the day. Then there's this third other group of personal media devices that have been in the market for at least a decade. These basically mirror the content on the device they're tethered to, such as a smartphone or a handheld gaming device to give you a big screen experience on the go. Today, we're going to zoom in on that third market, which probably has a smaller overall opportunity in terms of shipment volumes, but may end up having an outsized impact on the future of spatial computing. And with me today is Ralph Jodice, General Manager of North America and Global Head of Partnerships and Publicity with XREAL. Ralph, thanks for being on the show.

Ralph Jodice 00:01:37

Thanks for having me. I'm really excited to be here.

Neil Barbour

XREAL is a smart glasses company that got started as Nreal in 2017. It gained recognition for lightweight consumer AR glasses, such as the Nreal Light and later the XREAL Air series designed for entertainment, gaming and productivity. In 2023, Nreal rebranded to XREAL as it expanded internationally and broadened its ambitions in spatial computing. The new-new for XREAL is Project Aura, tethered smart glasses leveraging Google's Android XR platform. It's basically doing all or at least most of the stuff that Apple Vision Pro or the Quest 3 was doing a year or two ago, but in a much smaller form factor. Ralph, let's jump right in there. I tend to think of XREAL glasses as these really good portable content or productivity screens. But by and large, the experience is a little passive. Aura seems to unlock all these opportunities around interactivity being more immersed. How big of a generational leap are you guys making here?

Ralph Jodice 00:02:34

It is a significant change as we move into full spatial computing that Project Aura is capable of. Like you said, we've been wearable displays. We've been more of a passive screen through glasses that you wear on your face. And that's great. It's where we've come from. It is how we've learned. It's how we've introduced ourselves to XR enthusiasts globally. And the change from the wearable display glasses that we've had in market for the last 5 years to this big shift into full spatial computing with Project Aura is significant. I think generational is a fair way to put it. And that comes from having all these additional components come into this package. All the pieces are finally there. The optics, the display, the audio, the compute, such a major piece. And then the AI, I'm going to say it, the AI, it's such an important element of this. They all come together through what Google brings to the table, what QUALCOMM Inc. brings to the table and what XREAL brings to the table. It's 3 titans bringing their superpower, and they all are better together. So yes, it's pretty generational.

Neil Barbour 00:03:50

What's the market you're trying to carve out here? What are the key customer personas you expect to drive demand for this project?

Ralph Jodice 00:03:56

Yes. I don't want to use a BS answer of all of the markets, but there is a reality where there are many of the markets that work. But to be a little more pointed with the response to answer your question, there is absolutely a prosumer market, the professional consumer who is looking for the right device for work and play because that is something we are really good at doing both. We're not just going to be focused on one vertical. So it's not just one customer. But that prosumer who needs more real estate, who's used to having big screens, who's used to maybe having a 40-inch curved physical screen, that's not every consumer. That's more of a prosumer or a gamer who wants more real estate in their screen or just the entertainment enthusiast who wants 3D movies. So it's a little bit of multiple avenues. So it's the prosumer, it's the gamer, it's the desktop warrior, it's the business traveler. So what's beautiful about what we've done to date, right? Our wearable displays are pretty versatile. If you want to work, you got it. If you want to play, you got it. If you want to watch, you got it. And Project Aura kind of dials that up to the 9s because it gives you a bigger, faster, stronger unit because the compute is now built into this compute unit -- we have just a multitude of apps that can be launched from Google Play Store. We can also connect our compute unit to your PC to extend your virtual desktop. But we're still killer for video experiences. We're amazing for gaming experiences. So not to dodge your question, but like it really is a lot of different verticals and different markets. We're not going to be all things to everybody. But if you want to explore wired XR glasses for work, we have really killer use cases for you. If you want to explore wired XR glasses for fun and for play, you're going to be able to do a multitude of that.

Lenovo Group Limited (SEHK:992) > News

If you're a developer and want to start creating and tinkering and build your own thing, we've also got you covered. So we can do a little bit of everything, but we're really good at doing all the things also.

Neil Barbour 00:06:20

Right. And when you say prosumer, that's sort of a niche market with a lot of disposable income. But I also think about when you look at the Vision Pro and to a certain extent, the Quest 3, the pricing is a little bit out of the range for most consumers, particularly now that DRAMageddon has set in and sort of pushed those prices even higher. So I wonder, does this unlock some consumers who were curious about, oh, I want to take 3D photos or watch 3D films, but I'm not so into being -- to wearing a big bulky headset that costs \$3,000. I mean, are you seeing building on that market as small as it already is, are you guys looking at that subsegment, too, like not only building up from what you guys -- from your existing customer base, but down from maybe what Apple Vision Pro was doing 18 months ago?

Ralph Jodice 00:07:13

Weight, and fit and feel is really important. I do believe that is among one of the turnoffs of some of the bigger bulkier heavier VR helmets. They weigh too much. You feel that pressure on your nose, on your ears, on your temples, on your head, which can make it inaccessible. It can make it a bit of a pain to travel with. We solve for that with 91 grams and below for a multitude of glasses. So yes, and then price is important, especially in today's economy with DRAMageddon, like you said, that's really important. Our wearable display XREAL glasses today don't suffer from that because they are wearable displays. They plug into your computer into your phone into your handheld gaming console. So we don't have that same issue that a lot of these other manufacturers are feeling. That's why we've been able to like lower the price. So a month ago, we lowered the price of our XREAL 1 Pro from \$650 to \$600 in perpetuity. Our XReal 1S that came out in January lowered the price from its predecessor from \$500 to \$450. So we're able to bring our prices down on our wearable displays. And then our spatial computing device, our Project Aura, because that is a full spatial computer, it has its own dedicated compute, that will be a bit of a different price. We haven't announced that yet. We'll get there when we get a little closer to launch, but it's not \$3,500. I can guarantee that.

Neil Barbour 00:08:46

But to offer listeners a sense of scale, I weighed my own glasses the other day at non-smart glasses, they're about 35 grams. So the smart glasses that you're talking about are double that, but then compare that to the Vision Pro, which are -- which is like an 800, 900 gram experience. So -- but I would also say when going from 30 to 60 grams resting on your nose, you notice it, but it's not -- it's a pretty comfortable experience, particularly for like short flights that things of that nature. Can I double-click too on the pricing structure for some of your legacy hardware or the existing rack? Is that because there's not a lot of the in-demand components, your memory, your storage, things of that nature, is that how you're able to sort of move in the opposite direction of most of the rest of the consumer electronics market, which is getting more expensive?

Ralph Jodice 00:09:38

Yes, and that is part of it because we don't have to go buy memory for these glasses that are in market already. That memory exists inside the phone it's plugged into the computer it's plugged into, the steam deck it's plugged into. Those devices are having to go fight for that, and that's a challenge. And we get that, and we don't want to pass that cost along to our customers. That would be just crummy of us. So if we can lower the price of our devices, we will. And we have. Like I said, we just dropped \$50 off the Pro and \$50 off the one that converted to the S. So yes, we'll lower prices when we can because we don't suffer those same component issues. The other side of that is we build like 70% of the BOM ourselves. We own our own factories and production lines. We build like our chip that's inside of our glasses and our optics engine. We do a lot of it ourselves. So we're able to kind of control some of the pricing of that ourselves, which is great. We are not beholden to a lot of other manufacturers or components to a certain degree. So that plays a role in it also. And that was really important to us to be able to offer choice and value, choice and value, choice and value. We want to have multiple product lines in the market at once at different prices points so a customer can choose how they want to come into the XREAL ecosystem. And that was what's behind the new sub-brand that we just announced the other day. Again, this is \$299. This is an awesome way to offer a category for the gateway market, the folks who want to dip their toes in, but don't always want to pay a premium price for the most high-end device. That's cool. We're supportive of that. Not everybody wants to jump in at \$600, totally fair. If I don't have to, I don't want to either.

Neil Barbour 00:11:29

So it feels like smart glasses are kind of having a big moment or leading up to a big volume shipment moment in the next few years. But part of that is what you guys are doing, the really immersive experience that you put on and take off as needed. And then there's this other market of all-day wearables, and that's more what Meta is doing right now. Walk me through how you think about these 2 subsegments. Are they complementary? Are you in direct competition?

Ralph Jodice 00:11:55

There are all-day wearables, and we know we are not that. And we are not trying to be that. We're not trying to pull one over on you. We're not trying to position XREAL AR glasses as an all-day wearable like a Meta Ray-Bans is. I've got my Meta Ray-Bans. That's an all-day wearable. They're really good at that. What we are is an all-day portable, right? Because our glasses fit in your bag really easily. The case they come in fits in your bag or if you want to tuck them in your pocket. We

Lenovo Group Limited (SEHK:992) > News

know we're an all-day portable, and that's what we want to be. When you need a big screen, reach for XREAL glasses. Whether you're on a flight and you need to do some work or you're on a flight and you want to watch something, you can't open your laptop maybe you need a private screen and you don't want your laptop visible to others around you, maybe you're in a cafe. Maybe like old Ralph, you're sitting at the kitchen table today where I don't have my external monitors, but I can put on my XREAL glasses and now I can have a 310-inch curve screen. anywhere I want in space. We know we're not an all-day wearable, but we are an all-day portable. And those are just different categories. And there is room for both, right? Customers are showing us there's room for both, that the Ryzen OST hardware is on the rise, while VR is a little bit declining, but that no display or limited display has still got quite a bit of TAM, but there is room for all of it.

Neil Barbour 00:13:20

Not to put you on the spot here, what percentage of your work from home are you doing inside of XREAL glasses?

Ralph Jodice 00:13:26

Brother, there's not going to [be] a bigger power user than me. So I work in my XREAL glasses 4 hours a day probably. No kid -- no kidding because I work on multiple laptops. I've got an awesome Dell Technologies Inc. Pro Max when I need power and beef. And then I've got a more versatile slimmer Microsoft Corp. Surface when I'm on the go. In either case, I got rid of my physical monitors. Of course, I don't travel with a physical monitor who would. But I sit down at my desk in my office. There's not monitors on my desk. I sit at the kitchen table. There's not monitors on my table. I go to my XREAL satellite office and there's not monitors there. So I work in my glasses because I need to know the product better than anybody, and I encourage others also. Well, legitimately, I can get by 4 hours and the comfort is not a problem. It feels good, it fits good, and I have that big virtual workspace I need. But then somebody with a brain like mine that can maybe move a little fast sometimes, I need to be able to block out the world around me, and I can do that just by touching a button and my glasses go dark and now I can't see my LEGO sets in the room that might otherwise distract me or I can't see, oh, my kitchen is right there, that might distract me. I can use our electrochromic dimming, block out the world around me and I can just focus. So I'm in them 4 hours a day. I do my conference calls in my glasses. And that means when I'm seeing other people, they're 6 feet tall, they look like Jor-El in the Superman movies when him and the Science Council were massive and like, I like that. I feel like I can focus more.

Neil Barbour 00:15:03

Is there a path to XREAL getting into stand-alone smart glasses? I mean I think you kind of already answered that you guys know what you are. You have an identity, you've picked a lane. But maybe even just with a pair of audio-only frames, leverage that distribution network and that customer base you've already stood up and meet maybe more price-sensitive consumers, maybe consumers that are just looking for that to turn that dial a little bit to the left and say, I'm not looking for an immersive experience, but I would like to try an all-day wearable or something to that effect.

Ralph Jodice 00:15:32

Is there a path? Yes. Are we going to do it? Maybe. I'm not announcing a new product today. I'm not announcing that we're going to go build audio glasses. But maybe we are certainly evaluating that. We've got stuff in the labs. We've got stuff made. And then we're hardcore evaluating what to add to our road map because we've got a lot in market today. But our bread and butter is immersive cinematic visuals. That's what brought us to the dance, and we're really good at it. So you can bet that we're going to keep our focus on the thing that we're really good at, on the thing that differentiates us, but we're absolutely evaluating what to add to the road map and what makes sense for XREAL and our brand and what our customers want, but then also what other customers want. We want to meet them where they're at. So that's a pretty non-answer, but we're definitely thinking about it.

Neil Barbour 00:16:28

Yes. I mean, I guess not to hammer away at this, I bring it up because I was walking through, I believe it was this Walmart Inc. perhaps Target Corp. over the holidays. So this is going back 6 months now, and they just had a rack of something that just said smart glasses and they were \$20 a piece or something like that. I don't know what volume of shipments they were doing there, but it seemed like it was definitely a response to curiosity in the market, and you guys are sitting right next to that vertical. It's interesting to hear your perspective.

Ralph Jodice 00:16:58

Yes. And I'll tell you what we don't want to do. We don't want to make stuff because others are making stuff, right? And we don't want to make stuff just because we can. We can do a lot of things. We want to make stuff because it makes sense and because there's a customer demand for it and because we are innovators, and we want to lead in this market. So we have to think about all those angles as we build out our road map, as we think about new products. We don't want to make really cheap stuff just because we could. We value the quality of what we make. And that is why our products today are premium at \$650 down to \$600, at \$500 down to \$450. Make no mistake about it. I know that's still \$450 and \$600. That's not a small amount of money. We have the \$299 model coming into the market soon. But we don't want to just make a \$50 pair of audio glasses because we can. We want to make quality and quality that brings something to you. So we're going to pay attention to the market. We're going to continue to innovate and lead but hold us accountable if you see us making cheap crap because that is not what we want to do.

Neil Barbour 00:18:17

There's a correlation to that in the early VR market, too, perhaps going back to, let's say, 2014, '15, '16 when all these snap-in headsets came to market, a really low-priced, use-your-phone. And I don't want to invoke poisoning the well here too early, but there's an idea that people -- that's their first touch point for the technology. They are underwhelmed by it, and they don't come back or they don't come back for a long time. Something that we've talked about a lot on the show is the chicken and the egg problem with emerging hardware. Developers want scale before they commit and consumers want compelling apps before they buy in. You guys have done a lot to sort of bring both into the market, right? So there's this idea of introducing lower-cost options and then partnering with Google here. Talk about how those threads intersect. And I know that was a long-winded question. I hope that made a little bit of sense for you.

Ralph Jodice 00:19:14

It makes a ton of sense. It's a great question. And the egg was here first. The egg was here first. Dinosaurs have proven that to us, which evolved into chicken. If -- so the egg in my bad analogy is vision, A vision, not the vision product, a vision. And we have a vision, and that is the most important starting point is a vision and then a vision that matches what customers want. So what we have learned as we had a vision when we started this company back in 2017 was -- it was a big vision that included a lot of technology. And that's why the first product that we shipped was called Nreal Light. It had everything. It had optics, it had rich visuals, it had cinematics. It had 6 DOF, it had RGB. And in 2019, when we launched that product, there was not an industry, the customers were not there and the developers were not there. Now we were very innovative to have the vision and to create that product, but the industry and the pieces weren't there. I'm not saying it, but arguably, one might say, did Vision Pro find themselves in a similar scenario. They created an amazing piece of technology that is so performant. Are all the developers there, are all the customers there? I think they are, but at that price, maybe they're not. So what we learned back in 2019 was we need to take some of the tech out of this, and we need to meet the customer where they're at. There weren't developers creating XR apps at scale like this in 2019. There weren't people ready to buy the product. There weren't retail channels ready to go to scale. So we took Nreal Light, and we took a lot of the stuff out. We took out the RGB cameras. We took out the 6 DoF sensors. We took out SLAM, and that got us to our XREAL Air series, which was just a wearable display. So the big lesson for us was right, chicken, egg, we went too big, too fast, but we showed what was possible, vision, but then we peeled back a little bit to bring customers products that can sell. And that's how we sold 100,000 units and then 200,000 units and 300,000 units. That's how we started to grow and scale. That's what helped put us on the map and maybe give others confidence to jump into the AR glasses game. We certainly see a lot more products that look pretty familiar to what XReal has been building for a couple of years. But now here we are in the middle of 2026, and those things are very ready. And we'll come back to your first question, -- but we're at a turning point, and I don't use the term lightly, but we're at a turning point where all the pieces are here. There are absolutely developers killing it in the XR space. There are absolutely customers ready to buy, invest, play, watch and work in the XR space. There are more hardware manufacturers and component manufacturers, like the pieces are here, which is why we're so confident that Project Aura is the right fit. The developers are out there making killer content. Google has nailed it with the Android XR platform. It is the right way to approach this, an open XR platform, awesome. Qualcomm is bringing killer chipsets that power all these experiences from the compute point of view. And then what we can do with like a 70-degree field of view, SLAM sensors plus RGB, lightweight hardware, that makes the package. So yes, the pieces are here now where the chicken and egg can both go forward together and evolve into I'm going to lose this analogy, but Tyrannosaur 2.0. I don't know.

Neil Barbour 00:22:57

So when you sit somebody down inside of Project Aura for the first time, what is the first thing you show them? What is your killer app? What's your big demo?

Ralph Jodice 00:23:04

Oh man, it's such a great question because there's a lot of fun answers to it. Now I've got my answer to it because it's the thing that I'm so impressed with that I really like to do, but there are a couple of different experiences. And I want to know who the customer is, who the person is, who the demoer is. Are they a gamer? Do they want to play games? Are they a hardcore workaholic who wants to dive in on Excel and different work platforms? Are they finance and want to see all their markets in 3D space.

Neil Barbour 00:23:39

What do you have for somebody just wandering off the street and you don't know anything about them, but you know this is going to knock them down.

Ralph Jodice 00:23:47

Google Maps, which I think is such a fun answer, and that's my go-to. -- because Google Maps immersive viewing through XR glasses is so cool.

Neil Barbour 00:23:57

Are we talking about street view or is like -- go ahead, I'm sorry. I mean...

Ralph Jodice 00:24:02

Yes. It's a combination of street view, but also immersive world view. Google's nailed it on this because the immersive view, particularly made for XR, so not just what we see on our phones or computers, it's immersive. It's 360-degree views through glasses, which means your peripherals are still open, which means you can still see the world around you. So you're not going to walk into the wall, you're not going to walk into traffic. I find it so impactful because I can really travel the world in this immersive view, and then I can double-click into a street view that is life size. It is scale. It's so stinking cool. So that's why I get kind of energized about it because it's really easy to understand of like, okay, I'm in an immersed world, seeing the world or seeing my street view or going and visiting New York City or Arlington, Virginia or Seattle, Washington. That's one of the go-tos that I do because it's instantly impactful and people get to explore and they start to smile and they start to walk around, and it's really cool. So that's one that I will go to. Another one I'll go to is bringing holograms into the real world, where I am adding something on top of the world around me. When I do Google Maps and Street View, it's VR. It's -- I'm fully immersed. When I do something like a beautiful little game called Cubism, it's a really beautifully produced game where I'm grabbing blocks in the real world, these virtual blocks, and I'm solving a puzzle right here on my kitchen table or sitting out on the back patio where I'm still very much in my local environment, but I'm grabbing invisible holograms and I'm bending them and moving them to fit into place. I find that one really impactful.

Neil Barbour 00:25:51

Right. So that's kind of like the Quest 3S pass-through functionality. Yes, but in the smaller form factor.

Ralph Jodice 00:25:58

And in honest to goodness, optical see-through. It's not video pass-through, like Video pass-through is technically impressive. but there is enough of motion to photon latency. And then it is video reproduction of the real world around me, which is just a little different, seeing the actual real world around me through my glasses with my holograms in it, it feels natural, it feels super comfortable. It makes...

Neil Barbour 00:26:23

Interesting distinction because it goes back to what was it, the Magic Leap heuristic where you actually are imposing digital imagery on the real world instead of taking a photo or a video of the real world and imposing digital imagery on that. You talk about Apple Vision Pro not being able to come in at a very good price point. And there were indications that maybe they wanted to bring out a stripped-down model, perhaps tariffs, upstream component costs sort of scrambled that vision. When you guys look at next year, -- are you worried that these pricing impacts will only get worse and sort of scramble the value proposition? Or are you pretty confident you can come to market at a compelling price point?

Ralph Jodice 00:27:14

I will first shout out again that Vision Pro is a really impressive piece of hardware -- and the software is killer also. So I want to give them the respect they deserve for making something because Apple don't miss on hardware, like very impressive stuff. So again, super technically impressive. The price is what it is.

Neil Barbour 00:27:34

I certainly don't mean to denigrate Apple. I agree that it's a very impressive engineering feat. I more or less use that as a touchstone here just to compare the technology, I guess.

Ralph Jodice 00:27:45

Yes. What we like to say is 90% of the experience at 10% of the cost. And that is not an exact ratio because we're not going to be 10% of the cost. But we can do so much of the experience. But for example, we don't have eye tracking. We don't have inward-facing cameras and sensors. It's hard to build that into something as small as glasses. We also don't need it with what we're capable of doing. So 80% to 90% of the experience at a fraction of the cost. So yes, we are looking at how we can keep our costs lower. We'll talk about price for Aura when we get to the preorders and sales moment. It's just a little too early in the year. But make no mistake about it, it is this year, it is 2026. It is later this year. But yes, we are working through all those elements of how we try to keep the BOM down so we can have the cost be a little more accessible.

Neil Barbour 00:28:43

Lenovo Group Limited (SEHK:992) > News

There's a lot of volatility in the market. But you sound confident that you can kind of work through that at this point.

Ralph Jodice 00:28:50

Yes, I'm confident we can work through that. And then I also want to help people's expectations be met and be realistic. Like I said earlier, we make premium products. Our glasses at \$600 and \$450. I get it. They're still \$600 and \$450. We have an amazing product that we just started shipping with ASUSTeK Computer Inc. ROG, really awesome collaboration. That's got a different price on it. So I want to set the expectation that this is still premium, and there's a lot that goes into the Project Aura headset and compute unit because it is a combination of glasses plus puck. This one has compute unit. It's an AI computer by itself. That involves a lot more componentry. I'm confident that we'll be able to get the pieces. We have all the pieces done, right? We found the RAM. We know how -- we've built all the pucks and the glasses. So that's all good. We'll tell you about the price when we get to those consumer moments. But it's a little bit more than our glasses that are not stand-alone AI spatial computers by themselves. But it is a little more accessible than a \$3,500 stand-alone headset. It's somewhere in between.

Neil Barbour 00:30:03

If we came back and had another conversation in 18 to 24 months, and you told me Project Aura worked, what would success look like? Is it units, traction, developer engagement? There's still -- this is -- there's still runway here even if you don't have a blockbuster sales case. Talk to me about what success looks like.

Ralph Jodice 00:30:24

Yes, there's a few ways to define success. But right off the bat, it is content that attracts customers that leads the way to version 2.0. And I think most hardware manufacturers will probably say the same thing. But what we know is content sells these types of devices. You need amazing content. So success looks like having an amazing bank of brilliant developers cranking out awesome experiences. And this is a stone-cold superpower of Android and Android XR is developer attraction, retention, giving them all the tools they need to just bring your dreams to life. And like Android is awesome at this. Android XR is proving super good at this. So one benchmark of success is so many developers cranking away, making killer experiences. There's a use case for that. There's a use case for everything. So that's going to be one benchmark of success. That the development flywheel content. That's right. Set the development flywheel, which gives customers a reason to buy, which drives adoption. So yes, we'd love to see a really high mass market adoption, and that gives confidence to go build version 2.0. That hopefully ups the specs. So we -- like I said earlier, sure, we have a road map, but we're going to have a really awesome successful Project Aura developer cycle right now and then a consumer launch and then let that thing just continue to get bigger, faster, stronger, better. So we are confident in what Aura is going to do for developers, for customers, for enterprise, 3 different segments. So we're confident in all that. So 24 months from now, success looks like just amazing apps, wide-scale adoption and then confidence to go build version 2.0.

Neil Barbour 00:32:18

Yes. XREAL really strikes me as a patient company. It's funny to think about you're a smart glasses company that's a decade old now. And this technology that's just -- it seems like it's always on the brink of breaking through, but I've been looking at it for a decade. But the tech is getting better, like you say, a lot of the pieces are in place now as well. So a really interesting story to follow over the next year before we leave...

Ralph Jodice 00:32:41

If I could throw one more thing out because I'd be remiss if I didn't say. Success also looks like just this proliferation of the platform being Android XR. And there's a multitude of devices in there, which we're super supportive of. So success isn't just XR devices are killing it in the market. Of course, I hope for that. And I expect that to happen. But I'm eager to see other devices in the Android XR family also excelling because we want the proliferation of the platform, which means more developers, which means more content. And that content can live on, I don't know, [in] AI smart glasses. It can live in VR headsets that like our buddies at Samsung Electronics Co. Ltd. make with Galaxy, awesome. It could be on lightweight, lighter content glasses, awesome. And then also on our rich content XR glasses. So proliferation of the platform is a good thing. Other folks making hardware is a good thing because it's a rising tide and all our boats are going to sail with that.

Neil Barbour 00:33:42

Before we leave, I wanted to just touch on the partnership with ASUS. We know we have a lot of gamers in the audience or we touch on a lot of gaming-focused content. So XR seems to have a really special relationship with gamers. Just spool that story out for me a little bit.

Ralph Jodice 00:33:57

Lenovo Group Limited (SEHK:992) > News

Yes. So what we found when we made that transition from Nreal Light to the first pair of Nreal Airs then XREAL Airs, like we talked about earlier, gamers were our early adopters because gamers are always early adopters. -- love the gaming community. I come from gaming myself. So you love gamers and gamer audiences. It's more than half the connected world. Everybody in one form or fashion is playing a video game, especially on our phones. So what we found was as we pulled some of the tech out and we made "just a wearable display," the first use case was plug into Steam Deck. And that works beautifully. And then as more handhelds came out, ASUS went amazing with the ROG Ally series. I've got one of all of them. And then the ROG Xbox Ally, amazing. And then MSI Claw and then Lenovo Group Ltd. and then everybody has got an awesome handheld nowadays, which is great because -- the gamer audience is hungry to take that experience on to bigger screens, which is great. So we've always been close with the gamer audience. They were our first adopters. And then ASUS and particularly the ROG brand of ASUS is so good at what they do, right? ROG means awesome displays. It means quality hardware. So this relationship just kind of made sense of XREAL being great at what we do, amazing wearable displays, ASUS and ROG being great at what they do, amazing handhelds and killer hardware and monitors. And it was just this idea of like what if we put them together. And we're really excited about it. It just came into market like 2 weeks ago. So it's still early days, but we're excited to grow it, see it and see how customers respond to it.

Neil Barbour 00:35:44

Is that the one you're using when you work from home as well?

Ralph Jodice 00:35:46

It's -- I use all ours. I'm in and out of all of them. So yes, I definitely use it when I'm playing, right? Like that's my daily driver when I'm playing games, and I play games on every device out there. My daily handheld driver is the ROG Xbox Ally. So that's my daily handheld driver, but then I'll jump into a Switch 2 a lot. I'll jump into Lenovo Legion. But then if I'm connected on to my computer or phones, I'll probably swap into a different pair of XReals. When I'm on the go, I will use my Project Aura early kit. But I love the look and feel of the ROG glasses because they just have such a distinct design to them. I love the light field where I can do that rainbow design in light field that's so freaking cool. And again, when I can get 240 refresh off of my console, like, gosh, that's cool.

Neil Barbour 00:36:39

My TV is not even doing that, right? So...

Ralph Jodice 00:36:42

Yes, right. So I'll typically need a beefy PC stack -- but when I can get...

Neil Barbour 00:36:46

You need to back up hardware, right?

Ralph Jodice 00:36:48

Yes, cool.

Neil Barbour 00:36:49

That's awesome. Well, Ralph, thanks for your time.

Ralph Jodice 00:36:52

Thanks for having me. I could keep going and talking. So I appreciate the invite, and I appreciate the conversation.

TOP NEWS IN TMT

– Universal Music Group NV's (UMG) board rejected an unsolicited and nonbinding takeover proposal from Pershing Square Capital Management LP, saying the offer was not in the best interests of the company, its shareholders, artists, songwriters, employees and other stakeholders. Pershing Square's proposal would have merged UMG with Pershing Square SPARC Holdings Ltd. to create New UMG, a Nevada corporation to be listed on NYSE. Under the terms of the proposal, UMG shareholders would have received €9.4 billion in cash, or €5.05 per share, and 0.77 share of New UMG stock for each UMG share.

– Space Exploration Technologies Corp. secured a \$4.16 billion contract from the US Space Force to support a satellite program designed to track and target airborne threats, Reuters reported, citing a statement. SpaceX will help develop the Space-Based Advanced Moving Target Indicator constellation, which is expected to be operational by 2028.

Global Broadband & Pay TV: SIF 2026: SatOps redefine identity in APAC's transforming space economy

The satellite industry in the Asia-Pacific region is experiencing strategic development, with operators addressing unique market dynamics, regulatory challenges, and the growing demand for sovereign space capabilities.

TECHNOLOGY

– NVIDIA Corp. debuted its new RTX Spark chip, describing it as "the most efficient PC chip ever built," at the Computex conference in Taiwan, Dow Jones Newswires reported. NVIDIA said the chip will power the first personal laptop computers designed for running AI agents. NVIDIA will work with Dell Technologies Inc., Lenovo Group Ltd., Microsoft Corp., HP Inc., ASUSTeK Computer Inc. and Micro-Star International Co. Ltd. to produce the new computers.

– In other NVIDIA news, the company unveiled a reference design that will be used by research institutions to advance humanoid robotics research. The reference design features include NVIDIA's Jetson Thor onboard compute for advanced reasoning and control, the NVIDIA Isaac GR00T open development platform and the H2 humanoid chassis from Chinese robotics maker Yushu Technology Co. Ltd., also known as Unitree.

INTERNET AND OTT

– Several social media companies agreed to pay about \$27 million to settle claims brought by a Kentucky school district over allegations that they contributed to a student mental health crisis, Reuters reported, citing documents obtained via a public records request. Meta Platforms Inc. and YouTube LLC reportedly agreed to pay \$9 million and \$2.01 million, respectively, to settle the case, while Snap Inc. and TikTok Inc. agreed to pay \$8 million each. The settlements did not require admission of liability by the companies, which have denied the allegations.

– Sports streamer DAZN Group Ltd. secured media rights to the Canadian Football League's Saturday Night Football games in Canada starting in 2027. DAZN will also become the global home of the CFL, with every game available worldwide, excluding the US.

FILM AND TV

– A24 Films LLC's horror film "Backrooms" garnered approximately \$81.5 million in domestic ticket sales during its opening weekend, marking the highest ever debut for a horror film that is neither a sequel nor based on a book, The Wall Street Journal reported, citing box office data provider Comscore Inc.

H200 chip deal remains uncertain after Trump-Xi summit

S&P Global Market Intelligence

May-19-2026 06:16 AM

Following US President Donald Trump's summit with Chinese President Xi Jinping in Beijing, no clear resolution has emerged regarding the factors preventing NVIDIA Corp.'s H200 chips from reaching customers in China.

Since the United States Department of Commerce's Bureau of Industry and Security issued its H200 export framework at the start of 2026, roughly 10 Chinese companies have been approved to buy the chips, including Alibaba Group Holding Ltd., Tencent Holdings Ltd., Bytedance Ltd. and JD.com Inc. Each approved buyer can purchase up to 75,000 units under US licensing terms, Reuters reported May 14, citing sources familiar with the matter.

Lenovo Group Ltd. is among several companies approved to distribute the chips in China under NVIDIA's export license, according to Reuters, which cited a statement from Lenovo. A Lenovo spokesperson did not immediately respond to a request for comment.

United States Trade Representative Jamieson Greer said in an interview with Bloomberg TV the matter of H200 chip sales is a "sovereign decision for China."

"Obviously, we think it could be helpful to them in the long run," Greer said May 15. "But they'll just have to make their decision on that."

Commerce Secretary Howard Lutnick told lawmakers in a Senate Appropriations subcommittee hearing in April that the Chinese government has not yet allowed Chinese companies to buy the chips because China is focused on investing in domestic alternatives.

Ryan Fedasiuk, a China technology analyst at the American Enterprise Institute, told S&P Global Market Intelligence that competing interests inside both governments have produced the deadlock.

Within Beijing, economy-promoting agencies including the Ministry of Commerce and the National Development and Reform Commission generally favor chip imports, Fedasiuk said, while cybersecurity and intelligence groups have resisted, citing concerns that US-designed hardware could contain backdoors or location-tracking capabilities.

A third faction, which Fedasiuk believes includes Xi personally, would rather see Chinese AI companies absorb temporary compute scarcity than build long-term dependence on American hardware.

On the US side, a faction within the Trump administration has backed H200 sales specifically to undercut Huawei Technologies Co. Ltd.'s Ascend chip line, according to Fedasiuk, reasoning that keeping Chinese companies on American hardware limits the captive market available to domestic champions.

"I don't see an immediate path forward amid dual-government deadlock," Fedasiuk said. "The Chinese state seems content to refuse their import for the time being — preferring to have Chinese AI labs just rent compute abroad or smuggle what they need."

The House Select Committee on the Strategic Competition Between the United States and the Chinese Communist Party reached a similar conclusion in an April report, finding that China uses both legal and illegal means to acquire frontier AI capabilities, including advanced chips.

The Chinese Embassy in the US did not immediately respond to emailed requests for comment. The Chinese government has characterized US export control policy and discourse as "politicization and weaponization of tech and trade issues," according to a Chinese Foreign Ministry statement published by state-backed Global Times in 2025.

Just before Trump sat down with Xi on May 14, Chinese AI startup Hangzhou DeepSeek Artificial Intelligence Co. Ltd. said its latest model had been optimized to run on Huawei chips, the first such announcement from the company, The New York Times reported.

NVIDIA CEO Jensen Huang has estimated the Chinese AI market could be worth \$50 billion in 2026, according to Reuters. NVIDIA held roughly 95% of China's advanced chip market before the US tightened export restrictions, and China once accounted for 13% of NVIDIA's revenue, the news wire noted.

Kenton Thibaut, a senior resident fellow at the Atlantic Council, wrote May 15 that Beijing's posture reflects a longer-term calculation.

"Chinese policymakers appear prepared to absorb short-term pain in exchange for what they hope will be longer-term insulation from US chokepoints on chip technology," Thibaut said.

The White House's official X account said in a post that the two sides "discussed ways to enhance economic cooperation between countries" including "expanding market access for American businesses into China and increasing Chinese investment."

NVIDIA's Huang, outgoing Apple Inc. CEO Tim Cook, QUALCOMM Inc. CEO Cristiano Amon and Tesla Inc. CEO Elon Musk were among the US tech executives who joined Trump's trip to Beijing. Huang told a pool of reporters that the "meetings went well," while Musk said "many good things" were happening.

Xi, meeting with the US business delegation, said China "will only open its door wider," China's state-run Xinhua News Agency reported. He said economic and trade talks resulted in "generally balanced and positive outcomes."

Treasury Secretary Scott Bessent said May 15 the US was open to cooperating with China on AI safety, including establishing a protocol to prevent non-state actors from accessing frontier AI models.

Lenovo Group Limited (SEHK:992) > News

"The CCP's official position is squarely focused on promoting indigenous innovation in the hardware industry," said Fedasiuk of the American Enterprise Institute. "But it's clear Chinese AI labs will find creative workarounds to acquire whatever compute they need."

Spokespersons for Alibaba, ByteDance and DeepSeek did not immediately respond to emailed requests for comment.

Spokespersons for the White House Office of Science and Technology Policy, and the Commerce Department did not respond to requests for comment.

What's happening this week?

AMD tops Q1 revenue estimates as demand for AI infrastructure drives growth

S&P Global Market Intelligence

May-06-2026 05:51 PM

Accelerating demand for artificial intelligence infrastructure led Advanced Micro Devices Inc. to beat both revenue and net income estimates for the quarter ended March 28.

The chipmaker's first-quarter revenue rose 38% year over year to \$10.25 billion, up from \$7.44 billion, surpassing the S&P Capital IQ consensus estimate of \$9.92 billion. Net income reached \$1.38 billion, or 84 cents per share, compared with \$709.0 million, or 44 cents per share, a year earlier. The consensus GAAP EPS estimate for the quarter was 74 cents.

"Data center is now the primary driver of our revenue and earnings growth," AMD Chair and CEO Lisa Su said in the company's first-quarter earnings call. "As AI adoption scales, demand is increasing not only for accelerators, but also for the high-performance CPUs that power and orchestrate those workloads."

The data center segment generated revenue of \$5.78 billion, up 57% from the year-ago period, driven by strong demand for AMD EPYC processors and the continued ramp of AMD Instinct graphics processing unit (GPU) shipments, according to AMD's earnings release. During the call, Su highlighted AMD's expanded partnership with Meta Platforms Inc. to deploy up to 6 gigawatts of Instinct GPUs spanning multiple product generations — including a custom GPU accelerator — and disclosed that shipments are on track to begin in the second half of 2026.

Client and gaming segment revenue increased 23% year over year to \$3.61 billion.

Specifically, client business revenue rose 26% to \$2.9 billion, driven by strong demand for Ryzen processors and continued share gains across consumer and commercial markets. Commercial was a key highlight during the quarter, with sell-through of Ryzen Pro PCs increasing more than 50% year over year as Dell Technologies Inc., HP Inc. and Lenovo Group Ltd. broadened their AMD offerings, according to Su.

AMD anticipates demand for Ryzen CPUs will remain "solid" in the second quarter. However, PC shipments in the second half are expected to be lower due to higher memory and component costs.

Lenovo Group Limited (SEHK:992) > News

"Against this backdrop, we still expect our client revenue to grow year over year and outperform the market, driven by the strength of our Ryzen portfolio and expanding commercial adoption," Su said.

Gaming business revenue, meanwhile, rose 11% year over year to \$720 million, primarily driven by higher demand for Radeon GPUs, partially offset by lower semi-custom revenue.

In the embedded segment, revenue increased 6% to \$873 million, driven by strength in test, measurement and emulation, aerospace and defense, and communications markets, as well as the increased adoption of embedded x86 products.

AI infrastructure driving structural market expansion

AMD raised its outlook for the server CPU market, citing accelerating demand driven by the rapid scaling of AI workloads. The company now expects the server CPU total addressable market to grow at greater than 35% annually, reaching over \$120 billion by 2030 — a substantial increase from the approximately 18% annual growth rate outlined previously.

"We are seeing a meaningful acceleration in customer demand driven by the rapid scaling of AI workloads across both cloud and enterprise," Su explained. "Inferencing and agentic AI are increasing the need for server CPU compute as these workloads require additional CPU processing for orchestration, data movement and parallel execution."

In response to surging demand, AMD is working with supply chain partners to increase wafer and back-end capacities.

Supply chain and pricing dynamics

AMD executives acknowledged tight supply chain conditions and component availability challenges affecting the broader industry. They said the company is managing memory environment tightness through deep supplier partnerships and adjusting average selling prices to help offset inflationary pressures.

Higher memory and component costs are expected to particularly impact gaming sector demand in the second half, with AMD planning the business accordingly. The company expects second-half gaming revenue to decline more than 20% compared with the first half.

For the second quarter, AMD anticipates revenue will be approximately \$11.2 billion, plus or minus \$300 million. The midpoint of the revenue range represents year-over-year growth of about 46% and a sequential increase of roughly 9%.

2026 ad spending projected to grow behind Winter Games, World Cup, midterms

S&P Global Market Intelligence

Dec-29-2025 09:47 AM

Annual global advertising spending will soon pass the \$1 trillion mark — the only question is: how soon?

WPP PLC's global media collective, WPP Media, says the industry will hit that mark by the end of 2025. However, Dentsu Group Inc. believes the advertising industry will cross that threshold in 2026. Either way, advertising spending continued to advance this year, boosted by digital gains, at the expense of traditional TV.

As was the case in almost every business sector, artificial intelligence played a growing role in the industry, not only in terms of workflows, but client spending. Tariffs, which were expected to impact myriad businesses, did not affect ad spending as much as some had initially feared.

With 2026 being an even year, ad spending will benefit from major sporting events. The Winter Games will begin in February 2026, while June and July will bring the FIFA men's World Cup to the US, Mexico and Canada. Notably, the soccer tournament will expand from 32 nations to 48, and the number of matches will grow from 64 to 104.

The midterm elections will also fuel spending in the US after a nonpolitical cycle in 2025. Justin Nielson, head of S&P Global Market Intelligence's Kagan research, estimated that political spending on local TV stations could reach some \$3.8 billion in 2026. That would only be several hundred million dollars less than what was reported during the 2024 presidential election cycle.

WPP outlook

Characterizing 2025 as a "year of two halves," WPP Media boosted its outlook from its midyear update due to the fact that negative indicators — such as the impact of high US tariffs, a looming trade war and the potential for an "AI bubble" — never manifested, and macroeconomic fundamentals remain healthy.

In its "This Year, Next Year" report, WPP projects global advertising revenue will grow 8.8% in 2025 to \$1.14 trillion, with 7.1% growth predicted for 2026.

WPP's forecast is divided into four main segments. Content-driven advertising is the largest segment, as it includes forecasts for TV, audio, newspapers, magazines, social media and gaming. The segment is expected to account for 58% of total ad revenue in 2025, before decreasing to 55.1% by 2030.

Lenovo Group Limited (SEHK:992) > News

Social and digital platforms represent the primary growth engine for content-driven advertising, with WPP calling for a 12.8% rise to \$413 billion in 2025 and a 7.8% advance to \$445.4 billion in 2026. Although relatively small, gaming is the fastest-growing content advertising channel, projected to grow 29.5% to reach \$8.5 billion in 2025. In 2026, the channel is set to grow 25.6% to \$10.7 billion.

Meanwhile, traditional linear channels continue to face structural declines, with magazine advertising experiencing the steepest drop at 7.2% to \$15.6 billion in 2025, and 10.7% to \$14 billion in 2026.

WPP also said intelligence, artificial or otherwise, will account for 21.4% of ad revenue in 2025, primarily derived from search ad revenue, but expanding to include ad revenue from AI platforms.

Location-based advertising, including out-of-home and cinema, is expected to grow 6.3% in 2025 to reach \$56.9 billion globally. This category continues to demonstrate resilience, compared to other traditional media, with out-of-home maintaining its share of total advertising at 4.8% in 2025. WPP projects its take will remain stable at between 4.6% and 4.8% through 2030.

Looking at key categories, WPP believes consumer package goods (CPG) advertising is set to enter a more normalized phase in 2026, after years of pandemic-driven volatility and inflation-driven margin pressure. Total CPG ad spend is estimated to grow 8.3% in 2025, with 9.9% increase anticipated in 2026.

The technology category composite — covering such hardware-focused companies as HP Inc., Xiaomi Corp., LG Corp., Samsung Electronics Co. Ltd., Apple Inc., Lenovo Group Ltd., Dell Technologies Inc., and Nintendo Co. Ltd. — has been relatively soft with median advertising as a percentage of revenue at 1.8% in 2024, down from 1.9% in 2023. Overall advertising expenses are projected to grow 9.9% in 2025 and 7.6% in 2026, while advertising's share of revenue remains stable.

The financial services composite — banks, insurance providers, fintech platforms and payment companies — is expected to see ad spend expand 11.2% in 2025 and an additional 9.3% in 2026. Fintechs are projected to outpace traditional companies in spending and advertising intensity, reshaping the competitive landscape and prompting legacy players to rethink their customer acquisition and brand strategies.

By region, WPP projects North America's total advertising will rise 12.3% to \$452.9 billion in 2025, with further growth of 7.5% anticipated for 2026. Meanwhile, the ad market in the Middle East and Africa is expected to grow 6.9% to reach \$21.6 billion this year, followed by a 7.4% increase in 2026.

The European advertising market is projected to improve 5.8% in 2025 to \$257.6 billion, with an additional 5.5% increase on tap for 2026.

Dentsu forecast

For its part, Dentsu projects that 2026 will mark the first time global ad spend will eclipse the \$1 trillion mark. The agency forecasts a 5.1% jump, outpacing a 3.1% rise in the global economy, buoyed by what it calls the Algorithmic Era, where media connects brands and consumers via touchpoints to shop, share, experiment and belong.

"In the Algorithmic Era the brands that win will be the ones that understand how discovery and decision making are shaped by algorithms and use media as a strategic engine to earn attention and build long term advantage," Will Swayne, global practice president of media and integrated solutions at Dentsu, said in a statement. He said 2026 will reward "the marketers who innovate with intent, design for outcomes and meet people in the moments that matter."

As is the case with WPP, Dentsu cites digital advertising as the front-runner, pointing to 6.7% growth in 2026 and 68.7% of total investment. Retail media is expected to remain the fastest-growing digital channel at 14.1%, ahead of online video and social at 11.5% and 11.4%, respectively. More than 80% of digital buys will be transacted via programmatic platforms next year, according to Dentsu.

As for more traditional media, Dentsu is eyeing moderate growth with TV growing 2.4%, out of home up 4.1% and cinema increasing at a 2.2% rate. Print, though, is expected to decline by 3.0% in 2026.

From a category perspective, technology, bolstered by AI-led product launches and their increasing importance within businesses' ecosystems, is expected to be the fastest-growing area in 2026, at 10.3%. Government and beverages will be tied for second, both with 10.1% increases.

As noted, ad spending should rise behind the Winter Olympics in Italy and the expanded FIFA men's World Cup in the US, Mexico and Canada. Interest in sports is growing beyond the events themselves, as 40% of consumers screened a sports docuseries in the past month. Elsewhere, Dentsu noted that interest in Japanese anime is on the rise in the US, where the genre is watched by half of Gen Zers on a weekly basis, as more of that group identify as fans of the animated form than sports supporters.

More than two-fifths of chief marketing officers, or 42%, indicate that they are planning to increase investment in original content production and sponsorships, as brands will have a wider creative canvas to choose from in 2026, according to Dentsu.

The Americas region is forecast to grow by 5.2% in 2026 to \$460.5 billion, with US ad spending predicted to rise by 5% behind the World Cup and midterm election cycle. Brazil, at 9.1%, could register the fastest growth among major markets, while Canada is projected to increase by 5.4%. Dentsu forecasts that Asia-Pacific will expand by 5.4%, with China projected to push ahead 6.1% and India at an 8.6% level, via major sporting events and rapid digital expansion, according to Dentsu's "Global Ad Spend Forecasts."

Madison and Wall

Citing a strong third quarter, Madison and Wall increased its fourth-quarter 2025 US forecast to 10% growth, excluding political, or 3.9% including political. That would result in full-year growth of 11% on an ex-political basis, or 7.2% including it.

Lenovo Group Limited (SEHK:992) > News

The advertising consultancy believes some ad momentum will carry into the first part of the year, boosted by the Winter Games. Overall, Madison and Wall forecasts 6.6% growth in 2026 for the US, or 8.9% including political. The company attributes the slower growth rate in 2026 to mounting policy, geopolitical and regulatory pressures.

Propelled by walled garden platforms from Meta Platforms Inc., Google LLC and Amazon.com Inc., digital advertising formats will again set the pace, increasing by 10%, not including political revenues. Commerce is expected to remain the fastest-growing segment and could expand at a 16% clip, just ahead of social's 15% rise. Search and other digital formats will increase at 8% and 5%, respectively.

Conversely, Madison and Wall expects the open internet — encompassing independent digital publishers, connected TV, digital audio and out-of-home platforms — will be roughly flat in 2026, continuing their multiyear pattern of underperformance relative to walled gardens.

Programmatic buying will account for 74% of total open-internet revenues in 2026, including nearly 90% of revenues from the largest segment of the market — digital platforms and publishers. Madison and Wall anticipates multiple ad tech platforms will launch AI-powered buying tools designed to mimic the "black-box" optimization of the walled gardens.

TV revenues are projected to decline 2.3% in 2026, minus political contributions, but advance 4.9% when the midterm elections are factored in.

National TV will contract by 1.5%, excluding political, while local is forecast to be down 4.3%. However, the latter, notably TV stations, could see a more than 20% lift once political spending is included.

Looking at political advertising on a stand-alone basis, Madison and Wall projects nearly \$14 billion in media owner ad revenue from political and related sources in 2026, up from just under \$13 billion during the 2022 midterms but below 2024's \$16 billion level. The company estimates nearly \$7 billion will be expressed through digital channels, with close to \$5 billion allocated to TV-related media.

Amazon to invest \$35B in India; NVIDIA weighs boosting H200 chip supply to China

S&P Global Market Intelligence

Dec-18-2025 04:03 AM

Note: APAC TechWatch will not publish on Dec. 25 and Jan. 1, 2026. Your next issue will be Thursday, Jan. 8, 2026.

TOP NEWS IN TECH

- Amazon.com Inc. plans to invest over \$35 billion in India by 2030, targeting business expansion and focusing on AI-driven digitization, export growth and job creation. The plan includes accelerating digital transformation, supporting innovation, benefiting 15 million small businesses and providing AI education to 4 million government school students in the country.
- NVIDIA Corp. is considering boosting production of its H200 AI chips for China after demand surpassed current supply, Reuters reported, citing two sources briefed on the matter. This follows US President Donald Trump's announcement to permit NVIDIA to export H200 AI chips to China, subject to a 25% fee on such sales.
- S&P Global Market Intelligence Kagan has tracked social media followers across Meta Platforms Inc.'s Facebook and Instagram LLC, ByteDance Ltd.'s TikTok Inc., X (formerly Twitter Inc.) and Alphabet Inc.'s YouTube LLC for over 300 professional sports teams across 13 major leagues for the month of November.

TECH POLICY AND REGULATION

- The EU General Court upheld the European Commission's fine imposed on Intel Corp. in 2023 for abusing its dominant position when it imposed "naked" restrictions on HP Inc., Acer Inc. and Lenovo Group Ltd. regarding the use of Advanced Micro Devices Inc.'s processors. The court, however, reduced the fine to €237,105,540 from €376,358,000.

TECHNOLOGY

- Igneo Infrastructure Partners, Japan's ORIX Corp. and Canada's Northleaf Capital Partners Ltd. are among the bidders interested in acquiring Macquarie Asset Management Pty. Ltd.'s majority stake in Dutch hyperscale data center Amsterdam 1 Data Center, Bloomberg News reported, citing people familiar with the matter. Macquarie's stake in the data center could be valued at about €900 million. Bidders are reportedly expected to submit final offers by January.
- Roomba maker iRobot Corp. filed for Chapter 11 bankruptcy and will go private, transferring ownership to Shenzhen Picea Robotics Co. and Santrum Hong Kong Co., Dow Jones Newswires reported, citing a statement from iRobot CEO Gary Cohen. The company will delist from Nasdaq following court approval and continue operations without expected disruption to customers or partners.
- South Korea is considering establishing a 4.5 trillion South Korean won, or \$3.1 billion, state-and-privately funded foundry to boost its local chip sector, aiming to strengthen foundry and fabless chip design capabilities, Nikkei Asia reported.

MEDIA AND STREAMING

Lenovo Group Limited (SEHK:992) > News

– Australia's pay TV landscape is entering a gradual decline, as the country's traditional pay TV subscriptions fell slightly from about 1.62 million in 2023 to approximately 1.57 million in 2024, marking a year-over-year decline of about 3.1%. According to S&P Global Market Intelligence Kagan, Australia's multichannel penetration is expected to decline from 18.6% in 2024 to 10.6% in 2031, and multichannel revenue is forecast to decrease from \$720 million in 2024 to approximately \$309 million in 2031.

– Netflix Inc. will premiere the South Korean film "Cashero" on Dec. 26. The streamer also released the trailer for the film.

– In more Netflix news, the streaming platform will debut Korean romantic comedy series "Can This Love Be Translated?" on Jan. 16, 2026.

INTERNET

– Reddit Inc. filed a lawsuit in Australia's highest court to invalidate the enacted social media ban for supposedly infringing on teenagers' freedom of political discourse, Dow Jones Newswires reported.

TELECOMMUNICATIONS

– Australia's pay TV sector continued its gradual decline in 2024 as traditional pay TV subscriptions fell from around 1.62 million in 2023 to approximately 1.57 million in 2024, representing a 3.1% year-over-year contraction. S&P Global Market Intelligence Kagan projects Australia's pay TV sector to register a compound annual growth rate of negative 6.5% from 2024 to 2031, with subscriptions expected to fall to about 914,421 and penetration declining to 10.6%.

– The Australian broadband market continued its growth in 2024, as the sector reached 8.4 million households, reflecting an 8.97% year-over-year increase, with annual revenue of \$3.41 billion and an average revenue per user of \$35.43 in 2024. According to Kagan, Australia's residential fixed broadband market is projected to reach approximately 8.07 million subscribers by 2031.

– Recent telecom M&A and spectrum auction reshaped the mobile sector of Thailand at year-end 2024 and early 2025, demonstrating service quality and 5G boost, and aggressive diversification of user experience and coverage. The Thai mobile market has consolidated into a duopoly between Advanced Info Service PCL and the newly merged True Corp., which together controlled nearly 98% of subscribers in 2024.

– China's Huawei Technologies Co. Ltd. is considering the future of a factory completed in September in eastern France amid the slow deployment of 5G in Europe and European governments' strict rules against the use of Chinese network equipment, according to Reuters.

– Ericsson and Veon Ltd.-owned digital operator Pakistan Mobile Communications Ltd., doing business as Jazz, entered a strategic contract to expand Jazz's network backbone and advance digital experiences and connectivity in Pakistan.

– The Australian government will finance a \$120 million submarine fiber cable project connecting the north and south areas of Papua New Guinea, with a third cable connecting the autonomous territory of Bougainville, Light Reading reported. Google LLC will lead the rollout as part of the Pukpuk Treaty on defense signed by the two countries in October.

– China's large volume of 5G patents produced relatively little economic value, Light Reading reported, citing Wu Hequan, an academician at the state-backed Chinese Academy of Engineering. Wu said that only 28% of the 40% of the world's 5G standard essential patents registered by Chinese organizations are considered high-value radio access network patents, which represents an emphasis on the "over-development" of mostly low-value patents.

Florida resort secures \$1.15B refinancing: Lotte to buy NYC hotel site for \$490M

S&P Global Market Intelligence

Dec-15-2025 04:59 AM

TOP NEWS IN REAL ESTATE

– BDT & MSD Partners LLC refinanced the 1,047-room Boca Raton Resort & Club with a \$1.15 billion loan from Citigroup and Goldman Sachs, Commercial Observer reported, citing mortgage documents. The 165-acre Florida property includes 120,000 square feet of event space, 30,000 square feet of retail, 20 food outlets, a golf course, fitness centers, tennis courts, a luxury spa and a marina.

– South Korea-based Lotte Hotel & Resorts will acquire the land beneath its Lotte New York Palace Hotel for \$490 million from the Archdiocese of New York, The Korea Bizwire reported. The acquisition will eliminate long-term lease risks tied to the site, according to the report.

The Week in Real Estate: CRE supply shortages set to deepen

Commercial real estate is set to experience deepening supply shortages across property types in 2026, as new development continues to decline in North America and Europe, according to JLL's "Global Real Estate Outlook" report.

OFFICE

– Savanna closed a \$510 million refinancing for its 680,000-square-foot office property at 5 Bryant Park in New York City, Commercial Observer reported. King Street Capital Management LP and Blue Owl Capital provided the floating-rate loan. Eastdil Secured negotiated the deal.

RESIDENTIAL

– Elevest Capital closed Fund 62 by acquiring a two-property multifamily portfolio in North Carolina in partnership with Rise48 Equity, according to a company statement. Financial terms were not disclosed.

HEALTHCARE

– A Welltower Inc. affiliate acquired Waterstone on High Ridge, a senior housing complex in Stamford, Connecticut, for \$78.6 million, NewsTimes reported, citing Stamford property records. The affiliate, 215 High Ridge Road Propco LLC, purchased the 215 High Ridge Road facility from Stamford Senior Housing Owner LLC.

HOTELS

– A new 13-story, 300-room Autograph Collection hotel at Hollywood Park in Inglewood, California, secured \$195 million in financing from Bank of America, structured by CommLoan. CommLoan said the Marriott International Inc.-branded property will feature rooftop dining, spa and wellness facilities, and 20,000 square feet of meeting space. Construction is expected to finish in fall 2026.

– BPR Properties sold a two-property, 184-room hotel portfolio in Salisbury, North Carolina, in separate transactions, Hotel Management reported. The adjacent properties include the 94-room Courtyard by Marriott Salisbury and the 90-room Holiday Inn Express & Suites Salisbury, located at 120 and 125 Marriott Circle along Interstate 85. Financial terms of the transactions were not disclosed.

RETAIL

– Space Investment Partners purchased Topanga Gateway, a 123,402-square-foot retail center in Woodland Hills, California, for \$64 million or \$524 per square foot from Anderson Holdings, which has owned the asset for 22 years, Commercial Property Executive reported, citing Yardi Matrix information. The property, located at 21909 Ventura Blvd., was 97% leased at the time of the deal. Prudential Financial provided a \$42.9 million permanent acquisition loan. Eastdil Secured brokered the transaction on behalf of both parties.

– Prudent Growth Partners LLC acquired Baker Cypress Marketplace, a 47,364-square-foot retail center in Houston, Texas, for approximately \$5.8 million. The private equity real estate firm said the property is 94% occupied with 10 tenants.

INDUSTRIAL

– Lenovo Group Ltd. leased a 520,583-square-foot industrial building owned by Singapore-based Mapletree Investments Pte. Ltd. at 6550 Judge Adams Road in Rock Creek Center near Greensboro, North Carolina, Commercial Property Executive reported. The global technology company is investing \$77 million in the facility. The lease comprises 509,393 square feet for warehouse space and 11,190 square feet of office space.

INDUSTRY NEWS

– California-based MacKenzie Realty Capital Inc. launched a strategic review of its multifamily portfolio to enhance shareholder value, the Nasdaq-listed company said in a statement.

Google may face new EU fine in 2026; Channel 4 names CEO
S&P Global Market Intelligence
Dec-10-2025 11:59 PM

TOP NEWS IN TMT

Lenovo Group Limited (SEHK:992) > News

– Alphabet Inc.'s Google LLC may face a large fine in the EU in early 2026 if it fails to do more to make sure that its Play Store complies with the bloc's fair access and competition rules, Reuters reported, citing unnamed sources with direct knowledge of the matter. Issues include Google Play Store rules keeping app developers from directing users to cheaper offers through other channels.

– Channel 4 (UK) named Priya Dogra its next CEO, effective March 2026, replacing interim CEO Jonathan Allan. Dogra is now the chief advertising, group data and new revenue officer at Sky Ltd.

Technology Insight: Generative AI Digest: New models and copyright disputes

Google and Anthropic PBC rolled out major new model releases, while Microsoft Corp. used its recent Ignite event to spotlight a wave of agentic AI announcements. Legal disputes over copyright issues have also been grabbing headlines.

Data Dispatch: Deal Tracker: IT sector records trio of billion-dollar M&A deals in November

Billion-dollar M&A dealmaking continued in North America's IT sector in November as the overall transaction value and volume also marked a year-over-year increase, according to S&P Global Market Intelligence data.

TECHNOLOGY

– The EU General Court upheld the European Commission's fine on Intel Corp. in 2023 for abusing its dominant position when it imposed "naked" restrictions on HP Inc., Acer Inc. and Lenovo Group Ltd. regarding the use of Advanced Micro Devices Inc.'s processors. The court, however, reduced the fine from €376,358,000 to €237,105,540.

– The UK government partnered with Alphabet's DeepMind Technologies Ltd. to use AI for scientific discovery and education, including DeepMind's provision of priority access to its "AI for Science" models to scientists in the UK.

– Ericsson and MasOrange SL teamed up to deploy Ericsson's intelligent automation platform, which includes service management and orchestration, as well as its AI-powered rApps, to boost MasOrange's overall performance and energy efficiency.

INTERNET & OTT

– Amazon.com Inc. and Italy's tax collection agency agreed on the e-commerce company paying €510 million to settle a tax dispute in which Amazon allegedly evaded taxes amounting to about €1.2 billion, Reuters reported, citing two sources close to the matter. However, Italian prosecutors, in disagreement with the settlement deal, plan to continue their criminal investigation.

– Google's defunct Russian unit filed an order to seize the assets of the company's French operations as part of an attempt to recover €110 million, which Google Russia paid in dividends before Russia's invasion of Ukraine and the unit's bankruptcy, according to Bloomberg News, citing a statement from a lawyer representing Google Russia's liquidators.

– Streaming platform operator Zattoo Europa AG appointed Tina Rodriguez chief consumer officer, starting January 2026, Broadband TV News reported. Constanze Gilles, current head of the consumer business, is set to leave the company at the end of the year.

– ITV PLC streaming service ITVX said its total annual streams reached 3.3 billion on Nov. 30, surpassing its total annual streams figure from 2024 within 11 months.

TELECOMMUNICATIONS

– China's Huawei Technologies Co. Ltd. is considering the future of a factory completed in September in eastern France amid the slow deployment of 5G in Europe and European governments' strict rules against the use of Chinese network equipment, according to Reuters.

– Russia's federal telecom regulator Roskomnadzor scrapped 943 licenses due to non-provision of services for over six months, Telecompaper reported, citing Comnews.ru. This accounts for about 4% of all licenses issued to telecom operators in Russia.

FILM & TV

– Italy's competition regulator fined Telecom Italia SpA €4.2 million for "misleading communications regarding price increases for TV subscriptions," among other unfair commercial practices, Advanced Television reported.

– Sky and the Ladies European Tour extended their partnership to retain Sky Sports and the NOW streamer as the exclusive broadcaster of the golf tour, including the next three editions of the Solheim Cup.

– ITV Sport and BBC Sport announced their split coverage of the FIFA World Cup matches in June 2026. ITV will air 29 group stage matches, including the first two matches of the tournament.

ChangXin Memory's Shanghai IPO plans; Telkom Indonesia's fiber asset spinoff

S&P Global Market Intelligence

Oct-23-2025 04:00 AM

TOP NEWS IN TECH

– Chinese memory chipmaker ChangXin Memory Technologies Inc. plans to launch an IPO in Shanghai as soon as the first quarter of 2026, targeting a valuation of up to 300 billion Chinese yuan, or \$42.12 billion, Reuters reported, citing two sources briefed on the matter. The company aims to raise between 20 billion yuan and 40 billion yuan, with plans to unveil its prospectus to investors as early as November.

– Perusahaan Perseroan (Persero) PT Telekomunikasi Indonesia Tbk agreed to partially spin off its wholesale fiber connectivity business to its subsidiary PT Telkom Infrastruktur Telekomunikasi Indonesia (TIF) in a deal valued at 35.79 trillion Indonesian rupiah. Following the transaction, Telkom will hold 99.9% of TIF. The move aims to improve business focus, efficiency and support national digital initiatives, with no significant financial impact on the company's consolidated financials.

– Electronic Arts Inc. going private drove the vast majority of \$57.06 billion in gross transaction value in the quarter, but other potentially transformative moves from KRAFTON Inc. and Tencent Holdings Ltd. can be seen further down the table.

TECHNOLOGY

– Taiwan Semiconductor Manufacturing Co. Ltd. (TSMC) and NVIDIA Corp. unveiled the first NVIDIA Blackwell wafer produced at the South Korean company's semiconductor manufacturing facility in Phoenix, Arizona. NVIDIA said TSMC's Arizona facility will produce advanced technologies, including two-, three- and four-nanometer chips, along with A16 chips.

– Micron Technology Inc. will cease supplying server chips to data centers in China following a 2023 government ban on its products in critical infrastructure that hindered its business recovery, Reuters reported, citing two people briefed on the decision. The company will continue sales to two Chinese clients, including Lenovo Group Ltd., and will maintain sales to the country's automotive and mobile sectors.

– Haier Smart Home Co. Ltd. engaged China International Capital Corp. Ltd. and HSBC Holdings PLC to explore an IPO for its internet-of-things unit, Cosmoplat, potentially in Hong Kong in 2026, Bloomberg News reported, citing people familiar with the matter. The company aims to raise approximately \$500 million from the offering. Discussions are ongoing and specifics regarding the size and timing may change.

– Pixelworks Inc. agreed to sell its subsidiary, Pixelworks Semiconductor Technology (Shanghai) Co. Ltd., to a special purpose entity led by VeriSilicon Microelectronics (Shanghai) Co. Ltd. for approximately \$133 million. The transaction is expected to close by the end of 2025, pending customary closing conditions and approval by holders of 67% of Pixelworks' outstanding shares.

– Australian fiber solutions provider ScaleFibre established an entity in the UK called ScaleFibre UK Ltd., as part of its European expansion efforts. The new London-based entity will focus on high-density loose-tube and ribbon cables, multi-fiber push-on and multi-fiber termination push-on assemblies and optical infrastructure for hyperscale and carrier networks.

– French IT company Capgemini SE said it has completed its acquisition of WNS (Holdings) Ltd., an India-headquartered business process management company, for a total cash consideration of \$3.3 billion.

– Japan's Obayashi Corp. agreed to acquire all shares of US data center builder GCON Inc. and two of its affiliated companies to meet rising AI infrastructure demand, Nikkei Asia reported. The transaction is expected to close by mid-November. The deal is valued at tens of billions of yen, though financial details remain undisclosed.

– Chinese AI startup Beijing Shengshu Technology Co. Ltd. launched Vidu Q2, a video generation model designed to compete with OpenAI LLC's Sora, the South China Morning Post reported, citing Shengshu CEO Luo Yihang. The model enables creators to generate expressive videos using up to seven reference images. Membership options range from free access to a premium plan costing up to \$84 per month.

MEDIA AND STREAMING

Lenovo Group Limited (SEHK:992) > News

– Warner Bros. Discovery Inc. and CJ ENM CO. Ltd. formed a multiyear content production and distribution partnership to bring K-entertainment to HBO Max in 17 Asia-Pacific markets. These include exclusive premieres of original K-drama and series from CJ ENM and Tving Co. Ltd. within a branded TVING hub, beginning in early 2026. The companies will also co-produce original Korean dramas for global distribution on HBO Max.

– Publicis Groupe SA ruled out an offer for the international business of its Japanese rival Dentsu Group Inc. after the French advertising group raised its revenue growth forecast, the Financial Times of London reported, citing Publicis CEO Arthur Sadoun.

TELECOMMUNICATIONS

– As network advancements become evident in Asia-Pacific, telco and pay TV operators are increasingly leveraging partnerships with over-the-top providers to enhance their service offerings through bundling. The total number of OTT-operator partnerships across the 19 studied markets in Asia-Pacific reached 504 in 2025, a 12.2% year-over-year increase, according to S&P Global Market Intelligence Kagan.

– The US Federal Communications Commission initiated proceedings to revoke HKT (International) Ltd.'s authority to provide telecom services in the US. The agency's Office of International Affairs, Wireline Competition Bureau and Enforcement Bureau issued an order requiring HKT and its wholly owned subsidiaries to explain why revocation should not proceed.

– Japan's IHI Corp. signed a contract with Finnish satellite manufacturer ICEYE Oy to develop a constellation of up to 24 Earth observation satellites by fiscal 2029, Nikkei Asia reported, citing IHI President Hiroshi Ide. The initial purchase includes four synthetic aperture radar satellites, which are expected to cost ¥20 billion, though financial details remain disclosed.

Short interest in North American communication services stocks rises in August

S&P Global Market Intelligence

Oct-06-2025 04:33 AM

Average short interest in North American communication services stocks increased moderately in August to 4.06% of shares outstanding, according to S&P Global Market Intelligence data.

This represented an increase of 4 basis points from 4.02% in July. Year over year, short interest increased 34 basis points from 3.72% at the end of August 2024.

Overall, communication services ranked as the sixth-most shorted sector at the end of the month under review.

Cable and satellite was the most shorted industry within the communication services sector at the end of August, with short interest at 7.93%, up 15 basis points from 7.78% in July.

IT consulting and other services stocks ranked second, with short interest of 5.09%, down from 5.17% in July. Integrated telecommunication services and interactive home entertainment stocks were the least-shortest communication services stocks during the month.

Sector breakdown

Sphere Entertainment Co. had just over 7.4 million shares sold short by the end of August. With about 29.1 million shares outstanding, this represented short interest of 25.65% at the end of the month, unchanged from July, making Sphere the most shorted communication services stock on major US exchanges.

The operator of the Las Vegas Sphere on Aug. 11 reported second-quarter net income of \$151.8 million, or \$3.39 per share, compared with a net loss of \$46.6 million, or a loss of \$1.31 per share, a year earlier. The S&P Capital IQ consensus GAAP estimate was a loss of \$1.47 per share for the quarter.

Revenue rose year over year to \$282.7 million in the quarter, exceeding the consensus estimate of about \$280.2 million.

In August, Sphere entered a multiyear partnership with Lenovo Group Ltd. under which the latter's Tech World event will take center stage at Sphere in Las Vegas during CES 2026.

QMMM Holdings Ltd., a Hong Kong-based, US-listed advertising firm, was the second-most shorted communication services stock in August, with 19.18% short interest, up from 7.11% in July.

Lenovo Group Limited (SEHK:992) > News

This was the largest month-over-month increase in short interest among selected companies in the sector. The company had nearly 9.4 million shares sold short by the end of August.

In its earnings report for the six months ended March 31, QMMM posted a net loss of about \$1.4 million, or a loss of 8 cents per share, compared with a net loss of \$146,072, or a loss of 1 cent per share, in the prior-year period. Revenue declined to \$1.2 million from \$2.0 million year over year.

QMMM's stock closed at \$2.48 per share Aug. 1 before jumping 113% to \$5.30 by Aug. 29. On Sept. 9, the company announced a "strategic expansion into the cryptocurrency sector," including plans for a \$100 million crypto treasury and AI-powered blockchain solutions. The news caused shares to soar to \$207 on the same day, before closing September at \$119.40.

The surge attracted regulatory attention, and on Sept. 29, the US SEC temporarily halted trading in QMMM, citing concerns that "unknown persons" on social media may have manipulated the share price, according to Bloomberg News. The suspension is reportedly set to end Oct. 10.

Tripadvisor Inc. ended August with about 21.6 million shares sold short. Based on the online travel company's shares outstanding, Tripadvisor had short interest of 18.59% at the end of August, making it the third-most shorted communication services stock.

Sphere, QMMM and Tripadvisor did not respond to requests for comment.
