SK hynix's U.S. sales subsidiary revenue nearly doubled compared to the previous year last year. This is the result of strong HBM (High Bandwidth Memory) sales to big tech companies including Nvidia.

According to the Financial Supervisory Service on March 5, SK hynix's North American sales subsidiary 'SK hynix America' recorded revenue of 58.6933 trillion won (approximately \$40.47 billion) last year. This represents a 75.4% surge compared to the previous year's revenue of 33.459 trillion won.

Net profit growth is even steeper. The North American sales subsidiary's net income, which stood at 104.9 billion won in 2024, increased to 235.9 billion won last year, showing an approximately 124.9% increase. The performance growth of the U.S. sales subsidiary is attributed to the HBM (High Bandwidth Memory) demand boom driven by AI (artificial intelligence) demand from global big tech companies including Nvidia.

Accordingly, the share of the U.S. sales subsidiary in SK hynix's total consolidated revenue (97.1467 trillion won) expanded from 50.5% in the previous year to 60.4% last year.

On the other hand, the share of total revenue held by Chinese subsidiaries, which mainly sell mobile products such as low-power DRAM (LPDDR) and NAND, decreased. Revenue from the three subsidiaries, including SK hynix Semiconductor (China) Co., Ltd. and the Wuxi and Chongqing subsidiaries, reached 22.7513 trillion won last year, slightly increasing from the previous year (19.7163 trillion won). However, their share of total revenue declined from 30% in 2024 to 23.4% last year.

Revenue generated across the entire United States, including the U.S. sales subsidiary, increased by

products such as low-power DRAM (LPDDR) and NAND, decreased. Revenue from the three subsidiaries, including SK hynix Semiconductor (China) Co., Ltd. and the Wuxi and Chongqing subsidiaries, reached 22.7513 trillion won last year, slightly increasing from the previous year (19.7163 trillion won). However, their share of total revenue declined from 30% in 2024 to 23.4% last year.

Revenue generated across the entire United States, including the U.S. sales subsidiary, increased by 59.4% from 41.9611 trillion won to 66.8851 trillion won. The share of total revenue grew from 63.4% to 68.8%.

Meanwhile, China revenue increased by 23.2% from 15.5336 trillion won in 2024 to 19.1363 trillion won last year. However, its revenue share slightly declined from 23.5% to 19.7%.

As profits accumulated from strong high-performance semiconductor sales, retained earnings—a resource for future investments—significantly expanded to 106.2226 trillion won from the previous year (66.4181 trillion won).

Construction-in-progress assets nearly doubled to 21.7437 trillion won from the previous year (11.1072 trillion won). This is the result of increased large-scale facility investments, including the Yongin semiconductor cluster, in response to expanding HBM demand.
