Samsung's massive DDR5 512GB RAM modules are almost twice as powerful as DDR4

Published 5 years ago on August 24, 2021

By Sheetal Malviya

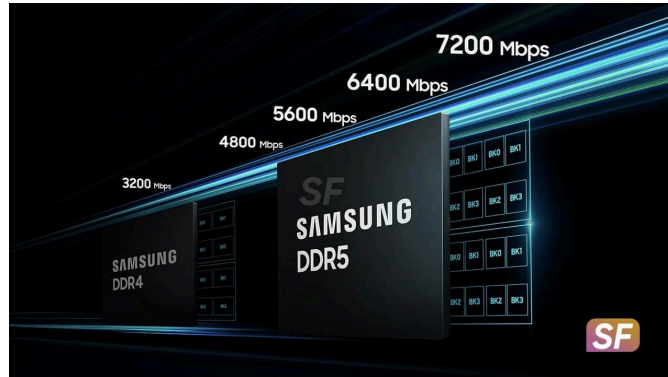

Samsung is among the products that will release [DDR5 RAM](#) this year and it looks like the manufacturer has an industry for the first time in its operations. During Hot Chips 33, an annual semiconductor disclosure event, Samsung unveiled its first DDR5 512GB RAM module. This new memory module is said to offer up to a 40% increase in performance over [DDR4](#), combined with double capacity and low power consumption.

Although Samsung's DDR5-7200 features a heavier design than previous DDR4 modules, the new stack weighs only 1.0mm, which is less than DDR4's 1.2mm. The reduction in size was achieved through Samsung's new wafer management process, which reduced the mortality gap by 40% and led to a significant reduction in altitude.

DDR5 is greatly enhanced by the use of integrated circuits (PMIC) and volume control. It was also integrated with the High-k Metal gate process. Samsung claims that the use of PMIC has done more than just reduce power – and reduce noise.

New memory modules will include Same-Bank (SBR) upgrades. The DRAM bus is said to be 10% more efficient than its current DDR4 counterparts. Samsung has also upgraded its new RAM with a new resolution (DFE) rating to improve signal stability.

Samsung predicts that the major market will not exceed DDR5 RAM by 2023 or 2024. However, the manufacturer plans to start producing bulk DDR5-7200 512GB RAM later this year.

Samsung unveils zHBM, zNAND-O and V10 BV-NAND AI memory

Published 3 days ago on August 4, 2026

By Yash Rathore

At Future of Memory and Storage (FMS) 2026 in Santa Clara, [Samsung](#) showcased a fresh batch of AI memory innovations, including **zHBM** and **zNAND-O**.

Fungus Is A Parasite, And It I
A Drop Of Plain...
Orivelle

The company has once again reminded the industry why it sits at the top of the memory game. The [showcase](#) included two concept models, zHBM and zNAND-O, along with the industry-first V10 BV-NAND, a NAND architecture that pushes past 400 layers.

Samsung zHBM AI memory

The standout reveal was zHBM, a concept that flips the traditional HBM layout on its head.

Instead of placing HBM beside the AI accelerator, Samsung's new architecture stacks it directly on top. It reduces the physical distance data has to travel, offering faster processing and better power efficiency for AI training and inference workloads.

Samsung claims a next-gen interface built around zHBM could hit roughly eight times the performance of HBM5, while memory density climbs past 10 times thanks to new

Samsung ZNAND-U AI memory

Alongside zHBM, Samsung introduced zNAND-O, a NAND solution aimed squarely at edge AI. Built on the company's existing V-NAND foundation, it's being developed in four- and eight-layer configurations, focusing on space efficiency, quicker I/O, and low latency.

Samsung V10 BV-NAND

Then there's V10 BV-NAND, which arrives 13 years after Samsung first introduced V-NAND back in 2013. This new generation uses Bonding V-NAND architecture and packs in more than 400 layers.

Wafer bonding technology plays a key role here too, letting Samsung stack cells more efficiently while also improving read, write, and I/O performance.

Additionally, Samsung used the event to lay out a broader roadmap covering everything from HBM and LPDDR to enterprise storage, all built around the idea of keeping AI infrastructure fast, efficient, and ready to scale.

Samsung updates One UI software rollout roadmap – August 2026

Published 4 days ago on August 4, 2026
By Yash Rathore

Samsung revised its One UI software rollout roadmap and made it public along with the [August 2026 security patch details](#). This is an important update for Galaxy users that lets them verify their device's software lifespan.

Interestingly, Samsung has made no significant changes to its August 2026 software rollout roadmap. Nearly all devices that were listed in the [July 2026 chart](#) are carried over to the August 2026 chart.

Samsung classifies its roadmap in two parts: Monthly and Quarterly. Flagship phones receive the latest patches every month, while others get them once a quarter.

Based on device eligibility and age, the company places them in the appropriate category, then moves them once before permanently dropping them from software updates

Here's everything you need to know about Samsung Galaxy Card

Published 4 days ago on August 3, 2026

By [Sheetal Malviya](#)

[Samsung](#) has launched its first credit card, the Samsung [Galaxy Card](#), in the US. It is made for people who want to earn cash rewards while shopping, especially when buying Samsung products. The card also gives rewards for everyday spending.

New cardholders can get a special welcome bonus. If you spend \$2,000 within the first 90 days after opening your account, you will receive \$200 in bonus cash rewards.

Samsung Galaxy Card [offers](#) different reward rates depending on where you shop. You earn 5% cash rewards when you buy directly from Samsung. This includes phones, tablets, TVs, accessories, and even preorders for new Samsung devices.

If you use the card through Samsung Wallet with Samsung Pay, you earn 3% cash rewards on your purchases. You also earn 2% cash rewards when paying for eligible

Galaxy S27 Ultra camera to use Samsung's advanced inkjet lens technology

Published 5 days ago on August 3, 2026

By Yash Rathore

Samsung's camera engineers clearly aren't slowing down, and the next year's flagship phone is shaping up to be another proof point. [Galaxy S27 Ultra camera](#) may retain Samsung's advanced inkjet lens process technology.

According to industry sources, Samsung Electronics and Samsung Electro-Mechanics are extending the inkjet lens printing process, first rolled out on the Galaxy S26 Ultra, to next year's Galaxy S27 Ultra camera as well.

Recently, an industry report revealed the camera specifications of the 2027 flagships.

Samsung's upcoming Galaxy S27 Pro and S27 Ultra will feature 200MP main, 50MP ultrawide, and 16MP selfie cameras, whereas the Pro gets 12MP 3x telephoto and the Ultra adopts a single 50MP 5x telephoto sensor.

Samsung Galaxy S27 Ultra battery leak: The 5,700mAh silicon-carbon upgrade

Published 5 days ago on August 2, 2026

By Yash Rathore

Galaxy S27 Ultra could impress Samsung fans if the silicon-carbon battery rumor turns out to be accurate. The company used the new battery solution in its foldable phones, and an expansion is reportedly planned for the flagship models.

Battery capacity has always remained the aspect Samsung has never gone aggressive on. While rivals aggressively adopted higher battery capacities, Samsung restrained and kept the size unchanged over the years.

Galaxy S27 Ultra to get silicon-carbon battery upgrade

A highly credible media outlet [reported](#) this week the potential battery capacities of the Galaxy S27 Pro and Galaxy S27 Ultra. The former is reportedly getting a 5,200mAh battery, while the latter is getting a 5,700mAh battery.
