Powerful inside and out

(<https://www.samsung.com/us/watches/galaxy-watch8/>)

The latest wearable tech is now here. [Samsung's Galaxy Ring](#) is more than just a fashion statement; it's your gateway to a world of health and fitness tracking. With its ability to monitor vital signs and activity levels, the Samsung smart ring is a powerful way to stay connected to your well-being¹. In this guide, we'll introduce you to the first ever Galaxy Ring and explore its key features and benefits.

¹. Compatible smartphone required. Requires Android 11 or above and the latest version of the Samsung Health app.

What is a smart ring?

A smart ring is a wearable technology that combines the convenience of a fitness tracker with the elegance of a piece of jewellery. It offers a discreet way to monitor health metrics like heart rate, sleep patterns, and activity levels. Designed to be both functional and fashionable, smart rings allow you to stay connected to your health goals without compromising on style. With features like sleep and workout tracking, they are not just about looking good; they're about living well.

Introducing Samsung's New BioActive Sensor

The all-new BioActive Sensor is essential to bringing you better preventative health experiences on the next Galaxy Watch, with design improvements that enable even more precise health insights. Samsung engineers focused on three upgrades to the new sensor: enhancing the performance of light-receiving photodiodes, adding additional colors of light-emitting diodes (LEDs), and arranging them optimally across the sensor.

Samsung more than doubled the performance of each photodiode, successfully decreasing the number needed to maintain capacity from eight to four. This redesign freed up additional space for the integration of a larger number and variety of LEDs and ensured their optimal placement across the sensor. The new sensor now includes Blue, Yellow, Violet, and Ultraviolet LEDs in addition to an increased number of Green, Red, and Infrared LEDs. With the integration and arrangement of these LEDs, and specially designed photodiodes, Samsung is taking innovation one step further and is now able to pursue unexplored aspects of health monitoring on wearables.

[\(https://news.samsung.com/us/samsung-new-galaxy-watch-bioactive-sensor-unlocking-new-possibilities-for-preventative-wellness/\)](https://news.samsung.com/us/samsung-new-galaxy-watch-bioactive-sensor-unlocking-new-possibilities-for-preventative-wellness/)

Measuring your blood oxygen level manually

Samsung Health Monitor

Introduction

You can measure biometric data, such as your blood pressure or ECG, whenever you want to with the Samsung Health Monitor of your Watch that includes both the optical bio-signal sensor and electrical bio-signal sensor. You can check the measurement history using the Samsung Health Monitor app on your connected phone since your Watch and phone have been synced automatically.

Manage your health more systemically with your physician based on your measurement results.

- If you have not installed the Samsung Health Monitor app on your connected phone, open the **Samsung Health Monitor** app on your Watch and follow the on-screen instructions to download it on the phone.
- The Samsung Health Monitor app is only supported on Samsung phones.
- Individuals under the age of 22 cannot use the Samsung Health Monitor app to measure your biometric data.
- This app may not be available depending on the region.

System-on-Chip

Dual-core Bluetooth SoC supporting Bluetooth LE, Bluetooth Mesh, NFC, Thread and Zigbee

The nRF5340 is the world's first wireless SoC with two Arm® Cortex®-M33 processors. The combination of two flexible processors, the advanced feature set, and an operating temperature up to 105 °C, makes it the ideal choice for LE Audio, professional lighting, advanced wearables, and other complex IoT applications.

The nRF5340 is an all-in-one SoC, including a superset of the most prominent nRF52® Series features. Features like Bluetooth® LE, high-speed SPI, QSPI, USB, up to 105 °C operating temperature, and more, are combined with more performance, memory and integration, while minimizing current consumption.

The application processor is optimized for performance and can be clocked at either 128 or 64 MHz, using voltage-frequency scaling. It has 1 MB Flash, 512 KB RAM, a floating-point unit (FPU), an 8 KB 2-way associative cache and DSP instruction capabilities. The network processor is clocked at 64 MHz and is optimized for low power and efficiency (101 CoreMark/mA). It has 256 KB Flash and 64 KB RAM.

20[e][i] determine whether the electronic device is worn on a part of a user's body,	The Domestic Industry Products determine whether the electronic device is worn on a part of a user's body. For example, the Domestic Industry Products determine whether the electronic device is worn on a part of a user's body, such as a wrist or a finger, using sensor(s) for wear detection.						

Properly wear and clean your Samsung smart watch

Wear your watch properly

When you want to wear your Samsung smart watch, there's a proper way to put it on, so it will be nice and snug with no discomfort.

First, center the watch on top of your wrist and slide the end of the strap or band through the loop. Then, fit the strap or band to your wrist and firmly insert the pin into the adjustment hole. Ensure the pin is fully inserted into the hole. But make sure not to overtighten the strap or band.

Take necessary precautions if your skin is hypersensitive or if you have an allergy to any materials found in the Galaxy smart watch.

Please also be aware of the following:

- Do not bend the strap or band excessively. Doing so may damage your watch.
- Do not brace your watch against your body or a table.

(<https://www.samsung.com/us/support/answer/ANS10003364/>)

Wear your Galaxy Watch/Fit properly

The following tips will help ensure you are comfortable whilst wearing your device, as well as help you avoid some common causes of skin irritation due to wearing a watch in certain situations.

- Dry your skin before putting on your Galaxy Watch/Fit.
- Tighten the strap enough to keep the device in place and does not slip, but not so tight that it cuts off blood circulation.

- To avoid skin irritation, remove the device if you have been:
 - Wearing the watch for an extended period of time
 - Sweating
 - Swimming while wearing the Galaxy Watch/Fit

Note: If your skin becomes irritated, stop wearing your device immediately and give your skin two or three days to heal. If your symptoms persist or worsen, contact your doctor.

(<https://www.samsung.com/levant/support/mobile-devices/how-to-correctly-wear-and-maintain-your-galaxy-watch-fit/>)

Getting Started

How to correctly wear the Galaxy Ring

Wear the ring with the orientation indicator facing your palm. Choose a finger where the ring fits comfortably, not too tight or loose.

(<https://www.samsung.com/ie/support/mobile-devices/how-to-use-the-samsung-galaxy-ring/>)

20[e][ii] when the electronic device is worn on the part of the user's body, determine a motion of the electronic device based on first information obtained by the at least one first sensor,

The Domestic Industry Products, when the electronic device is worn on the part of the user's body, determine a motion of the electronic device based on first information obtained by the at least one first sensor. For example, the Domestic Industry Products determine, when the electronic device is worn on the user's wrist or finger, a motion of the electronic device obtained by the at least one first sensor, such as an accelerometer.

Discover your optimal bedtime

BEDTIME GUIDANCE

Galaxy Watch8 uses three days of sleep data to find an optimal bedtime for you.⁴ When it's time to wind down, it gently nudges you according to your personalized sleep schedule.

🕒 How to use Sleep Coaching

ADVANCED SLEEP TRACKING

Track your nights. Own your days.

ADVANCED SLEEP COACHING

Your coach, day and night

SLEEP APNEA

Detect moderate to severe sleep apnea

(https://www.samsung.com/us/watches/galaxy-watch8/?gad_source=1&gad_campaignid=22026468931&gclid=CjwKCAiAlfvIBhA6EiwAcErpyTxQourKcXdoNy-zISVqjbmXfm-x9LWFION1OTVnDiFXZD5sc3cUaBoCwsgQAvD_BwE&gclsrc=aw.ds)

How can I improve my sleep quality?

[Galaxy Watch8](#) tracks every toss, turn and breath of your night. Each morning you get an in-depth sleep analysis based on your sleep stages, heart rate, skin temperature and oxygen level, highlighting what helped or hindered your rest.

You can also access a **Sleep Environment Report**³ which leverages data from compatible SmartThings devices to analyze room temperature, humidity, carbon dioxide and light levels. With this data at your fingertips, you can easily optimize your room conditions for a better night's sleep.

What can I do during the day to improve my sleep?

Once your sleep patterns are defined, **Sleep Coaching**⁴ assigns you a Sleep Animal and delivers personalized tips like adding a quick meditation session or skipping late-day caffeine. With [Galaxy Watch8](#), small, daily habit upgrades are easy, and better nights are within reach.

(<https://news.samsung.com/us/why-samsung-galaxy-watch8-series-is-every-biohacker-new-go-to-tech/>)

Activity and Stress Monitor

Activity Monitor

With the Galaxy Ring, after continuously exercising for a certain period, it automatically recognises the activity and starts recording. Your ring collects activity diagnostics such as steps, exercise time, and exercise and total calories burned. All diagnostics can be viewed using the Samsung Health app.

- Set up auto detect:

Step 1. Open the Galaxy Wearable app > Tap Health Settings.

Step 2. Tap Activities to detect > Turn switch On and specify activities that you'd like to auto detect.

(<https://www.samsung.com/ie/support/mobile-devices/how-to-use-the-samsung-galaxy-ring/>)

Sleep

Your Ring analyses your sleep by measuring your heart rate, blood oxygen, skin temperature, and more while you are sleeping.

- Check diagnostics:

Step 1. Open the Galaxy Wearable app > Tap Sleep > Check all information related to your measured sleep on the screen.

- Sleep measurement settings:

Step 1. Open the Galaxy Wearable app > Tap Health settings.

Step 2. Tap Sleep.

Step 3. Toggle with measurement settings to your preference.

(<https://www.samsung.com/ie/support/mobile-devices/how-to-use-the-samsung-galaxy-ring/>)

(<https://www.samsung.com/us/rings/galaxy-ring/>)

Galaxy Ring auto-tracks your walks and runs

Simply place it on your finger and Galaxy Ring will take care of the rest. Galaxy Ring **auto-tracks** your walks and runs without having to press any start buttons. Check calories burned and other stats on the Samsung Health app to keep track of your progress. ^{7,22}

How can I improve my sleep quality?

[Galaxy Watch8](#) tracks every toss, turn and breath of your night. Each morning you get an in-depth sleep analysis based on your sleep stages, heart rate, skin temperature and oxygen level, highlighting what helped or hindered your rest.

You can also access a **Sleep Environment Report**³ which leverages data from compatible SmartThings devices to analyze room temperature, humidity, carbon dioxide and light levels. With this data at your fingertips, you can easily optimize your room conditions for a better night's sleep.

What can I do during the day to improve my sleep?

Once your sleep patterns are defined, **Sleep Coaching**⁴ assigns you a Sleep Animal and delivers personalized tips like adding a quick meditation session or skipping late-day caffeine. With [Galaxy Watch8](#), small, daily habit upgrades are easy, and better nights are within reach.

Activity and Stress Monitor

Activity Monitor

With the Galaxy Ring, after continuously exercising for a certain period, it automatically recognises the activity and starts recording. Your ring collects activity diagnostics such as steps, exercise time, and exercise and total calories burned. All diagnostics can be viewed using the Samsung Health app.

- Set up auto detect:

Step 1. Open the Galaxy Wearable app > Tap Health Settings.

Step 2. Tap Activities to detect > Turn switch On and specify activities that you'd like to auto detect.

(<https://www.samsung.com/ie/support/mobile-devices/how-to-use-the-samsung-galaxy-ring/>)

Sleep

Your Ring analyses your sleep by measuring your heart rate, blood oxygen, skin temperature, and more while you are sleeping.

- Check diagnostics:

Step 1. Open the Galaxy Wearable app > Tap Sleep > Check all information related to your measured sleep on the screen.

- Sleep measurement settings:

Step 1. Open the Galaxy Wearable app > Tap Health settings.

Step 2. Tap Sleep.

Step 3. Toggle with measurement settings to your preference.

Samsung Health Monitor

Introduction

You can measure biometric data, such as your blood pressure or ECG, whenever you want to with the Samsung Health Monitor of your Watch that includes both the optical bio-signal sensor and electrical bio-signal sensor. You can check the measurement history using the Samsung Health Monitor app on your connected phone since your Watch and phone have been synced automatically.

Manage your health more systemically with your physician based on your measurement results.

- If you have not installed the Samsung Health Monitor app on your connected phone, open the **Samsung Health Monitor** app on your Watch and follow the on-screen instructions to download it on the phone.
- The Samsung Health Monitor app is only supported on Samsung phones.
- Individuals under the age of 22 cannot use the Samsung Health Monitor app to measure your biometric data.
- This app may not be available depending on the region.

Sleep

Analyse your sleep and record it by measuring your heart rate, blood oxygen, skin temperature, and more while you are sleeping.

This feature is only for your general wellness and fitness. Therefore, do not use it for medical purposes, such as diagnosing the symptoms, treatment, or prevention of disease.

- The sleep pattern will have its four states (Awake, REM, Light, Deep) analysed by using your movement and changes in your heart rate while you are sleeping. You can check the typical ranges for each measured sleep state in the graph on your connected phone.
- Before measuring, charge the Ring's battery so it is more than 20%.

Measuring your sleep

- 1 Sleep while wearing the Ring.

The Ring will start to measure your sleep.

- 2 After you wake up, open the **Galaxy Wearable** app on the connected phone.
- 3 Tap **Sleep**. The relevant screen of the Samsung Health app will appear. Check all information related to your measured sleep on the screen.
