bi-o-clim-a-toi-o-gy (bi'ô-kli'ma-tôl'ô-jê) *n.* The study of the effects of climatic conditions on living organisms. —**bi'ô-clim-a-tôl'ic** (-kli-mât'ik) *adj.*

bi-o-com-pat-i-bil-i-ty (bi'ô-kom-pât'ô-bil'i-tê) *n.* The property of being biologically compatible by not producing a toxic, injurious, or immunologic response in living tissue. —**bi'ô-com-pat'i-ble** *adj.*

bi-o-com-put-ing (bi'ô-kom-pyû'ting) *n.* 1. The use of cells or biological molecules such as DNA to perform the functions of an electronic computer. Also called *biological computing*. 2. See *bioinformatics*.

bi-o-con-tain-ment (bi'ô-kon-tân'ment) *n.* The containment of pathological microorganisms within a well-defined, strictly controlled area, usually a research laboratory.

bi-o-con-trol (bi'ô-kon-trôl') *n.* See *biological control*.

bi-o-con-ver-sion (bi'ô-kon-vûr'zhon) *n.* The conversion of organic materials, such as plant or animal waste, into usable products or energy sources by biological processes or agents, such as certain microorganisms.

bi-o-de-grad-a-ble (bi'ô-di-grâ'da-bol) *adj.* Capable of being decomposed by biological agents, especially bacteria: *a biodegradable detergent*. —**bi'ô-de-grad'ô-bil'i-ty** *n.* —**bi'ô-de-gra-da'tion** (-dêg'-râ-dâ'shon) *n.* —**bi'ô-de-grade'** *v.*

bi-o-die-sel (bi'ô-dê'sal, -səl) *n.* A biofuel made by processing vegetable oils and other fats for use in a diesel engine, either in pure form or as an additive to conventional diesel fuel.

bi-o-di-ver-si-fi-ca-tion (bi'ô-di-vûr'si-fi-kâ'shon, -dî-) *n.* The process by which biodiversity develops or is increased within a region or a group of organisms. —**bi'ô-di-ver'si-fied** *adj.*

bi-o-di-ver-si-ty (bi'ô-di-vûr'si-tê) *n.* 1. The number and variety of species found within a specified geographic region. 2. The variability among living organisms on the earth, including the variability within and between species and within and between ecosystems.

bi-o-dy-nam-ics (bi'ô-di-nâm'iks, -dî-) *n.* (used with a *sing. verb*) 1. The scientific study of the effects of dynamic processes, such as motion or acceleration, on living organisms. 2a. The holistic study of the vital force or energy of living matter and physiological processes. b. A holistic method of organic gardening and crop cultivation in which certain factors, such as planetary and seasonal cycles, are considered. —**bi'ô-dy-nam'ic** *adj.*

bi-o-elec-tric (bi'ô-i-lêk'trik) also **bi-o-elec-tri-cal** (-tri-kal) *adj.* 1. Of or having to do with the electric current generated by living tissue. 2. Of or relating to the effects of electricity on living tissue. —**bi'ô-elec-tri-ci-ty** (-i-lêk'tris'i-tê, -ê'lêk-) *n.*

bi-o-elec-tron-ics (bi'ô-i-lêk-trôn'iks, -ê-lêk-) *n.* (used with a *sing. verb*) 1. The study of the effects of electronics to biology and medicine. 2. The study of the role of intermolecular electron transfer in physiological processes. —**bi'ô-elec-tron'ic** *adj.*

bi-o-en-er-get-ics (bi'ô-en'ôr-jê't'iks) *n.* (used with a *sing. verb*) 1. *Biology* The study of the flow and transformation of energy in and between living organisms and between living organisms and their environment. 2. *Psychology* A form of therapy that focuses on the physical manifestation of emotional tension and stress, combining psychotherapy with physical therapies such as massage, relaxation techniques, and exercises in posture and breathing. —**bi'ô-en-er-get'ic** *adj.*

bi-o-en-gi-neer-ing (bi'ô-ên'jâ-nîr'ing) *n.* 1. The application of engineering principles to the fields of biology and medicine, as in the development of aids or replacements for defective or missing body organs. Also called *biomedical engineering*. 2. Genetic engineering. —**bi'ô-en-gi-neer'** *n.*

bi-o-en-vi-ron-men-tal (bi'ô-ên-vî'rên-mên'tl, -vî'arn-) *adj.* Having to do with the relationship between the environment and living organisms.

bi-o-e-quiv-a-lent (bi'ô-i-kwî'ô-lent) *adj.* Acting on the body with the same strength and similar bioavailability as the same dosage of a sample of a given substance. Used of differing formulations of a drug or chemical compound. —**bi'ô-e-quiv'a-lence** *n.*

bi-o-eth-a-nol (bi'ô-êth'ô-nôl', -nôl', -nôl') *n.* Ethanol produced by fermenting the sugars in biomass materials such as corn, sugar beets, switchgrass, or agricultural residues, used as a fuel in internal-combustion engines either in pure form or more often as a gasoline additive.

bi-o-eth-ics (bi'ô-êth'iks) *n.* (used with a *sing. verb*) The study of the ethical and moral implications of new biological discoveries and biomedical advances, as in the fields of genetic engineering and drug research. —**bi'ô-eth'i-cal** *adj.* —**bi'ô-eth'i-cist** (-i-sist) *n.*

bi-o-feed-back (bi'ô-fêd'bâk') *n.* The technique of using monitoring devices to furnish information regarding an autonomic bodily function, such as heart rate or blood pressure, in an attempt to gain some voluntary control over that function. It may be used clinically to treat certain conditions, such as hypertension and migraine headache.

bi-o-film (bi'ô-film') *n.* A complex structure adhering to surfaces that are regularly in contact with water, consisting of colonies of bacteria that secrete a mucilaginous protective coating in which they are encased. Biofilms, which are resistant to antibiotics and disinfectants, corrode pipes and cause diseases such as lung infections, but they can be used beneficially to treat sewage, industrial waste, and contaminated soil.

bi-o-fla-vo-noid (bi'ô-flâ'vâ-noid') *n.* See *flavonoid*.

bi-o-foul-ing (bi'ô-fou'ling) *n.* The impairment or degradation of something, such as a ship's hull or mechanical equipment, as a result of the growth or activity of living organisms. —**bi'ô-foul'er** *n.*

bi-o-fuel (bi'ô-fyû'ôl) *n.* A fuel, such as biogas or biodiesel, that is produced from renewable resources, especially plant biomass, vegetable oils, or treated municipal and industrial wastes. —**bi'ô-fueled'** (-fyû'ôld') *adj.*

bi-o-gas (bi'ô-gâs') *n.* A mixture of methane and carbon dioxide that is produced by bacterial degradation of organic matter and is used as a fuel.

bi-o-gen-e-sis (bi'ô-jên'î-sis) also **bi-og-e-ny** (bi-ôj'ô-nê) *n.* 1. The principle that living organisms develop only from other living organisms and not from nonliving matter. 2. Generation of living organisms from other living organisms. 3. See *biosynthesis*. 4. The supposed recurrence of the evolutionary stages of a species during the embryonic development and differentiation of a member of that species. Also called *recapitulation*. —**bi'ô-ge-net'ic** (-jâ-nê't'ik), **bi'ô-ge-net'i-cal** (-i-kal) *adj.* —**bi'ô-ge-net'i-cal-ly** *adv.*

biogenetic law *n.* The discredited theory that the stages in an organism's embryonic development repeat the stages in the evolutionary history of the species. Also called *Haeckel's law*, *recapitulation theory*.

bi-o-gen-ic (bi'ô-jên'ik) *adj.* 1. Produced by living organisms or biological processes. 2. Necessary for the maintenance of life processes.

biogenic amine *n.* Any of a group of naturally occurring, biologically active amines, many of which are neurotransmitters, including norepinephrine, dopamine, and serotonin.

bi-og-e-nous (bi-ôj'ô-nas) *adj.* 1. Originating from living things. 2. Producing life.

bi-og-e-ny (bi-ôj'ô-nê) *n.* Variant of *biogenesis*.

bi-o-ge-o-chem-is-try (bi'ô-jê'ô-kêm'î-strê) *n.* The study of the relationship between the geochemistry of a region and the animal and plant life in that region. —**bi'ô-ge'o-chem'i-cal** (-i-kal) *adj.*

bi-o-ge-og-ra-phy (bi'ô-jê'ô-g'râ-fê) *n.* The study of the geographic distribution of organisms. —**bi'ô-ge-og'râ-pher** *n.* —**bi'ô-ge'o-graph'ic** (-jê'ô-grâf'ik), **bi'ô-ge'o-graph'i-cal** (-i-kal) *adj.*

bi-og-ra-pher (bi-ôg'râ-fêr') *n.* The subject of a biography.

bi-og-râ-pher (bi-ôg'râ-fâr') *n.* One who writes, composes, or produces biography.

bi-o-graph-i-cal (bi'ô-grâf'i-kal) also **bi-o-graph-ic** (-grâf'ik) *adj.* 1. Containing, consisting of, or relating to the facts or events in a person's life. 2. Of or relating to biography as a literary form. —**bi'ô-graph'i-cal-ly** *adv.*

bi-og-ra-phy (bi-ôg'râ-fê) *n.*, *pl. -phies* 1. An account of a person's life written, composed, or produced by another: *a film biography of Adlai Stevenson*; *an oral biography*. 2. Biographies considered as a group, especially when regarded as a genre. 3. The writing, composition, or production of biographies: *a career entirely devoted to biography*. [Late Greek *biographia*: Greek *bio-*, *bio-* + Greek *-graphia*, *-graphy*.]

bi-o-haz-ard (bi'ô-hâz'ôrd) *n.* 1. A biological agent, such as an infectious microorganism, or a condition that constitutes a threat to humans, especially in biological research or experimentation. 2. The potential danger, risk, or harm from exposure to such an agent or condition. —**bi'ô-haz'ard-ous** (-ôz-dôs) *adj.*

bi-o-herm (bi'ô-hûrm') *n.* A massive, usually mound-shaped structure found in sedimentary rock strata, produced by the accretion of organic carbonate by a variety of marine invertebrates, such as corals and mollusks, and algae. [Bio- + Greek *herma*, sunken rock, reef (of unknown origin).]

bi-o-in-for-mat-ics (bi'ô-in'fôr-mât'iks) *n.* (used with a *sing. verb*) The use of computer science, mathematics, and information theory to organize and analyze complex biological data, especially genetic data. Also called *biocomputing*.

bi-o-in-or-gan-ic (bi'ô-in'ôr-gân'ik) *adj.* Of or having to do with inorganic compounds and their role in biochemical processes.

bi-o-in-stru-men-ta-tion (bi'ô-in'stra-mên-tâ'shon) *n.* 1. Use of instruments for the recording or transmission of physiological information, such as breathing rate or heart rate. 2. The instruments so used.

Bi-o-ko (bê-ô'kô) Formerly *Fer-nan-do Po* (fôr-nân'dô pô'). An island of Equatorial Guinea in the Gulf of Guinea.

bi-o-leach-ing (bi'ô-lêf'ching) *n.* The process of leaching metals from ore by using bacteria or fungi to convert the metals into a soluble form. —**bi'ô-leach-ed'** *adj.*

bi-o-lith (bi'ô-lith') *n.* A rock formed from the remains of or physiologic action of organisms. —**bi'ô-lith'ic** *adj.*

bi-o-log-ic (bi'ô-lôj'ik) *n.* A preparation that is synthesized from living organisms or their products, especially a human or animal protein, such as a hormone or antitoxin, that is used as a diagnostic, preventive, or therapeutic agent. ♦ *adj.* Variant of *biological*.

bi-o-log-i-cal (bi'ô-lôj'i-kal) also **bi-o-log-ic** (-lôj'ik) *adj.* 1. Of, relating to, caused by, or affecting life or living organisms: *biological processes such as growth and digestion*. 2. Having to do with biology. 3. Related by genetic lineage: *the child's biological parents*; *his biological sister*. 4. Being male or female by having the chromosomes for that sex: *a biological female*. 5. Of or relating to biological weapons: *biological warfare*. ♦ *n.* A biologic. —**bi'ô-log'i-cal-ly** *adv.*

biological clock *n.* 1. An internal mechanism in organisms that controls the periodicity of various functions or activities, such as metabolic changes, sleep cycles, or photosynthesis. 2a. The time period during which a person who desires to have a biological child, especially a woman approaching the decline of reproductive capability, is still able to do so. b. The capacity to be fertile, especially in such a woman: *She was eager to have a child before her biological clock stopped working*.

biological computing *n.* See *biocomputing* (sense 1).

biological control *n.* Control of a usually nonindigenous pest by introducing an organism that is a predator, parasite, or pathogen of the pest species in its native environment. Also called *biocontrol*.

biological half-life *n.* See *half-life* (sense 2a).

biological oxygen demand *n.* See *biochemical oxygen demand*.

biological control
An infestation of Montana rangeland by the Eurasian leafy spurge (top) was reduced after introduction of a flea beetle (bottom)

ā	pat	oi	boy
ā	pay	ou	out
ā	care	ōō	took
ā	father	ōōr	lure
ē	pet	ōō	boot
ē	be	ū	cut
ī	pit	ūr	urge
ī	bite	th	thin
ī	pier	zh	this
ō	pot	zh	vision
ō	toe	a	about
ō	paw		item
ōr	core		

Stress marks: / (primary);
' (secondary), as in
dictionary (dik'shō-nêr'ê)

bioluminescence
bioluminescent ctenophore

biomorph
brooch by Danish silversmith
Georg Jensen (1866-1935)

biological response modifier *n.* A substance, such as interferon, that is produced naturally or manufactured as a drug designed to strengthen, direct, or restore the body's immune response against infection or cancer.

biological warfare *n.* Warfare in which biological weapons are used. Also called *biowarfare*.

biological weapon *n.* A biological pathogen or toxin, such as the anthrax bacterium or the smallpox virus, that has been prepared for release on the battlefield or within a civilian population in sufficient concentration to cause widespread illness or death. Also called *bioweapon*.

bi-ol-o-gy (bi-ôl'ô-jî) *n.* 1. The science of life and of living organisms, including their structure, function, growth, origin, evolution, and distribution. It includes botany and zoology and all their subdivisions. 2. The life processes or characteristic phenomena of a group or category of living organisms: *the biology of fungi*. 3. The plant and animal life of a specific area or region. [German *Biologie*: Greek *bio-*, *bio-* + Greek *-logia*, *-logy*.] —**bi-ol'o-gist** *n.*

bi-o-lu-mi-nes-cence (bi'ô-lô'mô-nês'sens) *n.* The emission of visible light by certain living organisms, such as the firefly and various fish, marine invertebrates, fungi, and bacteria. Bioluminescence is caused by chemical reactions. —**bi'ô-lu-mi-nes'cent** *adj.*

bi-ol-y-sis (bi-ôl'i-sis) *n.* 1. Death of a living organism or tissue caused or accompanied by lysis. 2. The decomposition of organic material by living organisms, such as microorganisms. —**bi'ô-ly'tic** (bi'ô-lit'ik) *adj.*

bi-o-mag-net-ism (bi'ô-mâg'nî-tîz'm) *n.* 1. The magnetic field created by a living organism. 2. The effect of an external magnetic field on living organisms. 3. The scientific study of these phenomena.

bi-o-mag-ni-fi-ca-tion (bi'ô-mâg'nâ-fî-kâ'shən) *n.* The increasing concentration of a substance, such as a toxic chemical, in the tissues of organisms at successively higher levels in a food chain.

bi-o-mark-er (bi'ô-mâr'kər) *n.* 1. *Medicine* *a.* A physiological substance, such as human chorionic gonadotropin or alpha-fetoprotein, that when present in abnormal amounts in the serum may indicate the presence of disease, as that caused by a malignancy. *b.* A specific physical trait used to measure or indicate the effects or progress of a disease or condition: *Biomarkers of aging include thinning of the hair*. Also called *biosignature*. 2. See *biosignature* (sense 1).

bi-o-mass (bi'ô-mâs') *n.* 1. The total mass of living matter within a given unit of environmental area. 2. Plant material, vegetation, or agricultural waste used as a fuel or energy source.

bi-o-ma-te-ri-al (bi'ô-mâ-tîr'ê-âl) *n.* A biocompatible material that is used to construct artificial organs, rehabilitation devices, or prostheses and replace natural body tissues. [BIO(COMPATIBLE) + MATERIAL.]

bi-o-math-e-mat-ics (bi'ô-mâth'ô-mât'iks) *n.* (used with a *sing. verb*) The application of mathematical principles to biological processes. —**bi'ô-math'e-mat'i-cal** *adj.* —**bi'ô-math'e-ma-ti'shian** (-mâtish'yan) *n.*

bi-ome (bi'ôm') *n.* A major regional or global biotic community, such as a grassland or desert, characterized chiefly by the dominant forms of plant life and the prevailing climate.

bi-o-me-chan-ics (bi'ô-mî-kân'iks) *n.* 1. (used with a *sing. verb*) The study of the mechanics of a living body, especially of the forces exerted by muscles and gravity on the skeletal structure. 2. (used with a *pl. verb*) The mechanics of a part or function of a living body, such as of the heart or of locomotion. —**bi'ô-me-chan'i-cal** *adj.* —**bi'ô-me-chan'i-cal-ly** *adv.*

biomedical engineering *n.* See *bioengineering* (sense 1).

bi-o-med-i-cine (bi'ô-méd'î-sîn) *n.* 1. The branch of medical science that deals with the ability of humans to tolerate environmental stresses and variations, as in space travel. 2. The application of the principles of the natural sciences, especially biology and physiology, to clinical medicine. —**bi'ô-med'i-cal** (-i-kəl) *adj.*

bi-o-me-te-or-ol-o-gy (bi'ô-mê-tê-ô-rô'l'ô-jî) *n.* The study of the relationship between atmospheric conditions, such as temperature and humidity, and living organisms.

bi-o-met-rics (bi'ô-mêt'riks) *n.* (used with a *sing. verb*) 1. The statistical study of biological phenomena. 2. The measurement of physical characteristics, such as fingerprints, DNA, or retinal patterns, for use in verifying the identity of individuals. —**bi'ô-met'ric**, **bi'ô-met'ri-cal** *adj.* —**bi'ô-met'ri-cal-ly** *adv.*

bi-om-e-try (bi-ôm'î-trî) *n.* Biometrics.

bi-o-mi-met-ics (bi'ô-mî-mêt'iks, -mî-) *n.* (used with a *sing. verb*) The study of the structure and function of biological systems as models for the design and engineering of materials and machines. —**bi'ô-mî-met'ic** *adj.*

bi-o-morph (bi'ô-môrf') *n.* A nonrepresentational form or pattern that resembles a living organism in shape or appearance. —**bi'ô-mor'phic** *adj.* —**bi'ô-mor'phism** *n.*

bi-on-ic (bi-ôn'ik) *adj.* 1. Of or relating to bionics. 2. Having anatomical structures or physiological processes that are replaced or enhanced by electronic or mechanical components. 3. Having extraordinary strength, powers, or capabilities; superhuman. [bi(o)- + (ELECTR)ONIC.]

bi-on-ics (bi-ôn'iks) *n.* (used with a *sing. verb*) Application of biological principles to the study and design of engineering systems, especially electronic systems. [bi(o)- + (ELECTR)ONICS.]

bi-o-nom-ics (bi'ô-nôm'iks) *n.* (used with a *sing. verb*) The science of ecology. [*<* French *bionomique*, pertaining to ecology *<* *bionomie*, ecology: Greek *bio-*, *bio-* + Greek *-nomia*, *-nomy*.] —**bi'ô-nom'ic**, **bi'ô-nom'i-cal** *adj.* —**bi'ô-nom'i-cal-ly** *adv.*

bi-ont (bi'ônt') *n.* An individual organism, especially a symbiont. [*<* -BIONT or back-formation *<* HALOBIONT, SYMBIONT, etc.]

-biont *suffix*. Living organism; mode of living; *halobiont*. [bi(o)- + -ONT.]

bi-o-or-gan-ic (bi'ô-ôr-gân'ik) *adj.* Of or having to do with organic compounds and their role in biochemical processes.

bi-o-pes-ti-cide (bi'ô-pēs'tî-sîd') *n.* An organism, such as a fungus, bacterium, or virus, or a naturally occurring substance, such as a pheromone or mineral, that is used to control or kill pests.

bi-o-phar-ma-ceu-ti-cal (bi'ô-fâr'mâ-sôô'tî-kəl) *n.* A drug created by means of biotechnology, generally a protein or nucleic acid rather than a small molecule.

bi-o-phil (bi'ô-fîl') *n.* One who feels a strong attraction for or emotional attachment to the living world. *adj.* 1. Conducive to or supportive of life: *a planet with a biophile atmosphere*. 2. Tending to concentrate in the tissues of living organisms: *biophile elements such as phosphorus and iodine*. —**bi'ô-phil'ic** (-ik) *adj.*

bi-o-phil-i-a (bi'ô-fîl'ê-ô-, -fêl'ya) *n.* A strong attraction for or emotional attachment to the living world. —**bi'ô-phil'ic** (-ik) *adj.*

bi-o-phys-ics (bi'ô-fîz'iks) *n.* (used with a *sing. verb*) The science that deals with the application of physics to biological processes and phenomena. —**bi'ô-phys'i-cal** *adj.* —**bi'ô-phys'i-cal-ly** *adv.* —**bi'ô-phys'i-cist** *n.*

bi-o-pic (bi'ô-pîk') *n.* A film or television biography, often with fictionalized scenes.

bi-o-pi-ra-cy (bi'ô-pî'râ-sî) *n.* The commercial development of biological compounds or genetic sequences by a technologically advanced country or organization without obtaining consent from or providing fair compensation to the peoples or nations in whose territory the materials were discovered. —**bi'ô-pî-rate** (bi'ô-pî'rît) *n.*

bi-o-poly-mer (bi'ô-pôl'y-mər) *n.* A macromolecule in a living organism that is formed by linking together several smaller molecules, as a protein from amino acids or DNA from nucleotides.

bi-o-proc-ess (bi'ô-prôs'ēs, -prô'sēs) *n.* 1. A technique that produces a biological material, such as a genetically engineered microbial strain, for commercial use. 2. Production of a commercially useful chemical or fuel by a biological process, such as microbial fermentation or degradation. —**bi'ô-proc'ess** *v.*

bi-o-pros-pect-ing (bi'ô-prôs'pêk-tîng) *n.* The attempt to discover in living organisms biochemical or genetic sequences that have medical, agricultural, or industrial value. —**bi'ô-pros'pec-tor** *n.*

bi-op-sy (bi'ôp'sî) *n.*, *pl.* -sies 1. The removal and examination of a sample of tissue from a living body for diagnostic purposes. 2. A sample so obtained. *tr.v.* -sied, -sying, -sies To remove (tissue) from a living body for diagnostic purposes. —**bi'ô-p'sic** (bi-ôp'sîk), **bi'ôp'tic** (-tik) *adj.*

bi-o-psy-cho-l-o-gy (bi'ô-sî-kôl'ô-jî) *n.* See *psychobiology*.

bi-o-re-ac-tor (bi'ô-rê-âk'tər) *n.* An apparatus, such as a fermentation chamber, for growing organisms such as bacteria or yeast that are used in the biotechnological production of substances such as pharmaceuticals, antibodies, or vaccines, or for the bioconversion of organic waste.

bi-o-re-gion (bi'ô-rê-jən) *n.* An area bounded by natural rather than artificial borders that has characteristic flora and fauna and includes one or more ecosystems. —**bi'ô-re'gion-al** *adj.*

bi-o-re-gion-al-ism (bi'ô-rê-jô-nâ-lîz'm) *n.* The belief that social organization and environmental policies should be based on bioregions rather than on arbitrary political boundaries. —**bi'ô-re'gion-al-ist** *n.*

bi-o-re-me-di-a-tion (bi'ô-rî-mê-dê-â'shən) *n.* The use of biological agents, such as bacteria or plants, to remove or neutralize contaminants, as in polluted soil or water.

bi-o-re-search (bi'ô-rî-sêrch', -rê'sêrch) *n.* Research in the biological sciences.

bi-o-re-serve (bi'ô-rî-zûrv') *n.* An area containing a wildlife preserve bordered by a buffer zone in which more frequent use is permitted to the public, established as a way of integrating habitat conservation with the interests of the local community.

bi-o-rhythm (bi'ô-rîth'm) *n.* An innate, cyclical biological process or function. —**bi'ô-rhyth'mic** (-rîth'mîk) *adj.*

BIOS (bi'ôs) *n.* The set of routines stored in read-only memory that enable a computer to start the operating system and to communicate with the various devices in the system, such as disk drives, keyboard, monitor, printer, and communications ports. [bi(asic) i(nput)o(utput) s(ystem).]

bi-o-safe-ty (bi'ô-sâf'tî) *n.* The set of measures taken to ensure the safe handling of biohazardous materials, such as pathogens, biological contaminants, and genetically modified organisms, especially to prevent their accidental spread beyond a laboratory or research facility.

bi-o-science (bi'ô-sî-ens) *n.* See *life science*. —**bi'ô-sci'en-tif'ic** (-sî'ân-tîf'ik) *adj.* —**bi'ô-sci'en-tist** *n.*

bi-o-scope (bi'ô-skôp') *n.* An early movie projector.

bi-os-co-py (bi-ôs'kâ-pî) *n.*, *pl.* -pies Medical examination of a body to determine the presence or absence of life.

bi-o-se-cu-rity (bi'ô-sî-kyôô'rî-tî) *n.* The set of measures taken to limit or counter the threat posed by sudden widespread disease or biological contamination, as from biological warfare, acts of bioterrorism, or pandemic outbreaks, including measures for increasing public safety and preparedness as well as procedures aimed at restricting access to biohazardous materials or to information relating to their production.

bi-o-sen-sor (bi'ô-sên'sər, -sôr) *n.* 1. A device that detects, records, and transmits information regarding a physiological change or process. 2. A device that uses biological materials, such as enzymes, to monitor the presence of various chemicals in a substance.

bi-o-sig-na-ture (bi'ô-sîg'nâ-char) *n.* 1. A chemical or physical marker indicating the presence of life, especially something sought in
