biometric pertaining to the measurement of the human body: in security terms, relating to means of *authentication* based on patterns unique to an individual's body, such as fingerprints and retinal patterns, or behaviour, such as voiceprints or handwriting

BIOS Basic Input/Output System, the "hardwired" firmware programming used to start the *boot* process in *ISA/Wintel* computers. The BIOS is located in the *ROM* area of the system and is usually stored permanently. There are many BIOS versions in *ISA/Wintel* computers, but they generally assume the operating system will be interrupt driven (as MS-DOS is), and start to set up structures to support that model. Since *boot sector infectors* run before the operating system starts, and require only the BIOS programming, they are sometimes called BIOS viruses, although the term can create confusion and should be avoided. Some computers now use EEPROM (Electrically Erasable Programmable Read Only Memory), and at least one virus now tries to erase such "flash" BIOS programming. Otherwise, BIOS cannot be infected or corrupted by a virus.

bit error rate the number of erroneous bits divided by the total number of bits transmitted, received, or processed over some period of time. Also bit error ratio. Abbreviated BER.

blackhat communities or individuals who attempt to break into computer systems without prior authorization, or explore security primarily from an *attack* perspective. The term originates from old American western
