Re: Certain Wearable Devices, ITC Inv. No. 337-TA-1478

Dear Honorable Judge Johnson Hines,

Pursuant to Commission Rule § 210.34(a) and the Ground Rules, Complainants Samsung Electronics Co., Ltd. and Samsung Electronics America, Inc. (collectively, “Samsung” or “Complainants”) respectfully move for a Protective Order directing that Samsung need not respond to the 2,288 Requests for Admission (“RFA” or “Request”) in Respondents Ouraring, Inc. and Oura Health Oy’s (collectively, “Oura” or “Respondents”) Second Set of RFAs on the grounds that the inordinate number of requests are wholly duplicative of other discovery to be provided in the case and were served at the literal last minute allowed for discovery in a clear attempt to bury Samsung in busywork while in the midst of depositions and expert discovery. In the alternative, Complainants request that Respondents be required to serve a revised set of RFAs limited to no more than 250 Requests selected from the 2,288 already served and permit Complainants to respond within ten days from service of the revised RFAs.

GROUND RULE 5.1 CERTIFICATION: Pursuant to Ground Rule 5.1, Complainants certify that they made reasonable, good-faith efforts to resolve the matter with Respondents before filing the motion. The parties met and conferred on this issue via teleconference on May 26, 2026. Respondents indicated that they would neither withdraw nor significantly narrow the scope of the RFAs. Reaching an impasse, Samsung informed Oura it intended to file this motion.

I. Legal Standard

Under Commission Rule § 210.34, the ALJ may “make any order that may appear necessary and appropriate ... to protect a party ... from [] oppression, or undue burden or expense,” including, “That the discovery may be had only on specified terms and conditions.” 19 C.F.R. § 210.34(a)(2). Ground Rule 6.4.4 further provides that “Motions to limit an inordinate number of requests for admission will be considered.” Order No. 2 at 11.

While the Commission Rules do not have a numerical cap on RFAs, they do provide for limits on discovery where: “(1) the discovery sought is unreasonably cumulative or duplicative, or can be obtained from some other source that is more convenient, less burdensome, or less expensive; ... or (4) the burden or expense of the proposed discovery outweighs its likely benefit, considering

the needs of the investigation, the importance of the discovery in resolving the issues to be decided by the Commission, and matters of public concern.” 19 C.F.R. § 210.27(d). Moreover, an Advisory Committee Note to Federal Rule of Civil Procedure 36, the analog of 19 C.F.R. § 210.31, explicitly provides that a responding party to RFAs “may obtain a protective order” if the requests are “so voluminous and so framed that the answering party finds the task of identifying what is in dispute and what is not unduly burdensome.” Fed. R. Civ. P. 36, 1970 Advisory Committee Notes.

RFAs are “not to be used in an effort to harass the other side or in the hope that a party’s adversary will simply concede essential elements.” *Stokes v. Interline Brands Inc.*, No. C-12-05527, 2013 WL 6056886, at *2 (N.D. Cal. Nov. 14, 2013) (citation omitted) (finding the “sheer volume of [1,059] requests for admission [] unduly burdensome and oppressive” and limiting the serving party to only 25 RFAs); see also *Perez v. Miami-Dade Cnty.*, 297 F.3d 1255, 1268 (11th Cir. 2002) (“When a party ... uses [RFAs] to harass the other side or, as in this case, with the wild-eyed hope that the other side will fail to answer and therefore admit essential elements ... the rule’s time-saving function ceases; the [RFAs] instead become[] a weapon, dragging out the litigation and wasting valuable resources.”).

“Courts routinely disallow requests for admission that run into the hundreds on the grounds that they are abusive, unreasonable, and oppressive.” *Robinson v. Stanley*, No. 06 C 5158, 2009 WL 3233909, at *2 (N.D. Ill. Oct. 8, 2009); see also *Misco, Inc. v. U.S. Steel Corp.*, 784 F.2d 198, 206 (6th Cir. 1986) (concluding that the filing of 2,028 RFAs was “an abuse of the discovery process”). Upon finding that the volume of RFAs is excessive, the ALJ may set a more reasonable numerical limit. See, e.g., *Keithley v. Homestore.com, Inc.*, No. C-03-4447, Order, ECF No. 526, at 2 (N.D. Cal. June 6, 2008) (finding 761 RFAs excessive and setting a limit of 300 RFAs).

II. Argument

A. Complainants should not be required to respond to Respondents’ Unreasonably Cumulative and Duplicative Discovery Served Only to Harass Complainants.

Respondents’ Second Set of RFAs contains 2,288 Requests (RFA Nos. 70-2357) and spans more than 300 pages. The majority of the RFAs comprise near-identical RFA language repeated for permutations of each alleged prior art reference with each patent and claim limitation. See Ex. A (Respondents’ Second Set of RFAs), at 22-85, 91-134, 136-198, 203-312. The clearly formulaic, copy-and-paste language across over 2,000 RFAs is unreasonably cumulative and duplicative. In fact, several RFAs are identical, e.g., RFAs 540 and 1381, 541 and 1382, 542 and 1383, 543 and 1384, and 544 and 1385. Worse yet, the vast majority of Respondents’ 2,288 RFAs concern the validity of the Asserted Patents, serving absolutely no purpose and providing no efficiency given the fact that Complainants must submit a Statement of Uncontested Claim Elements for each allegation of invalidity pursuant to Ground Rule 11.3 and the Procedural Schedule. See Orders 2 and 6.

This is a textbook example of the “unreasonably cumulative or duplicative” discovery which can also “be obtained from some other source that is more convenient, less burdensome, or less expensive,” which Commission Rule § 210.27(d)(1) requires the ALJ to limit by order. 19 C.F.R. § 210.27(d)(1). Oura’s 2,288 RFAs are an obvious abuse of the discovery process, and Complainants should not be required to respond.

The inordinate number of Respondents’ RFAs places an extraordinary burden on Samsung, which is amplified by the timing. Respondents served their Second Set of RFAs on May 19, 2026,

at 7:59 PM ET—literally the very last minute they could have timely served the RFAs in light of the May 29, 2026 fact discovery cut-off and 8:00pm ET service deadline—during a period in which Complainants are defending and conducting numerous depositions across continents in multiple cities in addition to working towards other fact and expert discovery deadlines. See Ex. B (May 19, 2026, Email from T. Miller). Respondents' motivation for the RFAs is even more suspect given that Respondents' Second Set of RFAs concerns prior art, the vast majority of which was cited in their initial invalidity contentions served over two months ago on March 16, 2026. Respondents plainly had more than ample opportunity to serve these RFAs much earlier at a time and in a manner that would have been far less burdensome to Complainants.

Taking into account “the needs of the investigation [and] the importance of the [RFAs] in resolving the issues to be decided by the Commission,” “the burden or expense of [Respondents' RFAs] outweighs [their] likely benefit.” 19 C.F.R. § 210.27(d)(4). Upon such a finding, Commission Rule § 210.27(d)(4) requires the ALJ to limit the extent of discovery by order. See *id.*

B. In the alternative, Respondents should be required to serve a more reasonable number of Requests for Admission.

If the ALJ disagrees with Complainants' request to relieve them from having to respond to the more than 2,000 cumulative Requests in Respondents' Second Set of RFAs, Complainants move in the alternative for a protective order that would reduce the currently inordinate number of RFAs to one that is more reasonable and directed toward issues that can be narrowed ahead of trial—*i.e.*, 250 selected from the 2,288 Requests in Respondents' Second Set. The proposed limit, combined with the 69 RFAs Respondents previously served, would be in line with the 300 RFA limit the court enforced in *Keithley v. Homestore.com*. See No. C-03-4447, Order at 2. Complainants further request that if Respondents are permitted to narrow their Requests, Complainants be allotted ten days from service of the revised RFAs to respond, per Ground Rule 6.4.4. Given the timing of Respondents' original Second Set of RFAs, Complainants respectfully note that the deadline for Complainants to respond to a revised set of RFAs would fall after the close of fact discovery, which is May 29, 2026.

III. Conclusion

For the foregoing reasons, Complainants respectfully request that the ALJ grant Samsung's motion for a protective order directing that Samsung need not respond to the Respondents' Second Set of RFAs or, in the alternative, be required to respond to only 250 of those Requests within 10 days of service of a revised set of RFAs following a ruling on the present motion.

Respectfully submitted,

/s/ D. Sean Trainor

Co., Ltd. and Samsung Electronics America, Inc.*

EXHIBIT A

**UNITED STATES INTERNATIONAL TRADE COMMISSION
WASHINGTON, D.C.**

**Before the Honorable Doris Johnson Hines
Administrative Law Judge**

In The Matter Of

CERTAIN WEARABLE DEVICES

Investigation No. 337-TA-1478

**RESPONDENTS' SECOND SET OF REQUESTS FOR ADMISSION
TO COMPLAINANTS SAMSUNG ELECTRONICS CO., LTD. AND SAMSUNG
ELECTRONICS AMERICA, INC.**

Pursuant to the United States International Trade Commission's Rules of Practice and Procedure, 19 C.F.R. §§ 210.27 and 210.31, Respondents Ouraring, Inc. and Oura Health Oy (collectively, "Respondents"), by their undersigned attorneys, hereby request Complainants Samsung Electronics Co., Ltd. and Samsung Electronics America, Inc. (collectively, "Complainants") to separately answer each request for admission set forth below, in writing, under oath, and signed by an officer in accordance with the Definitions and Instructions contained herein, and serve such answers on Respondents' counsel, within the time prescribed by the rules of the Commission and of the Administrative Law Judge.

DEFINITIONS

1. The "'359 Patent" means U.S. Patent No. 10,642,359.
2. The "'677 Patent" means U.S. Patent No. 10,945,677.
3. The "'675 Patent" means U.S. Patent No. 10,231,675.
4. The "'789 Patent" means U.S. Patent No. 10,978,789.

5. The “Asserted Patents” means the ’359, ’677, ’675, and ’789 Patents. An “Asserted Patent” refers to any one of the Asserted Patents.

6. “Related Patents or Applications” for a given patent shall mean all patents and patent applications listed under the “Related U.S. Application Data” on the face of the given patent and any foreign counterpart patents and patent applications of the given patent and including provisional, continuation, continuation-in-part, divisional, reissue, or reexamination applications filed with respect to the given patent and their foreign counterparts.

7. The “Asserted Claims” means claims 1, 2, 4, 7, 8, 10, 14, 15, and 20 of U.S. Patent Nos. 10,642,359 (“the ’359 Patent”), claims 13-20 of the 10,231,675 (“the ’675 Patent”), claims 1-7, 9-14, and 16-20 of the 10,945,677 (“the ’677 Patent”), and claims 1-10 of the 10,978,789 (“the ’789 Patent”).

8. “Oura” or “Respondents” means Respondents Ouraring Inc. and Oura Health Oy.

9. “Samsung,” “Complainants,” “You,” and “Your” refers to Complainants Samsung Electronics Co., Ltd. and Samsung Electronics America, Inc., along with their past and present predecessors, successors, subsidiaries, divisions, parents and affiliates, and all past and present officers, directors, agents, trustees, employees, consultants, accountants, attorneys, representatives, and any other person or entity acting in whole or in part on behalf of any of the foregoing.

10. “Accused ’359 Products” means all of Respondents’ products that Samsung contends are covered by any Asserted Claim of the ’359 Patent.

11. “Accused ’677 Products” means all of Respondents’ products that Samsung contends are covered by any Asserted Claim of the ’677 Patent.

12. “Accused ’675 Products” means all of Respondents’ products that Samsung contends are covered by any Asserted Claim of the ’675 Patent.

13. “Accused ’789 Products” means all of Respondents’ products that Samsung contends are covered by any Asserted Claim of the ’789 Patent.

14. “Accused Product” or “Accused Products” means collectively the Accused ’359 Products, Accused ’677 Products, Accused ’675 Products, and Accused ’789 Products.

15. The term “covered product(s)” means any product(s) or service(s) that allegedly embodies the inventions described and claimed in the Asserted Patents, which Samsung contends are included within the domestic industry of the Asserted Patents.

16. “’359 accused features or functions” shall include features and functions in the Accused Products identified in the Infringement Chart for the ’359 Patent (First Amended Complaint Ex. 13 and the Domestic Industry Chart for the ’359 Patent (Samsung’s Initial Tech DI Contentions, dated March 17, 2026, Ex. 1), including features and functions relating to the capability of the Accused Products to capture and analyze movement, biological, and health data of a user.

17. “’677 accused features or functions” shall include features and functions in the Accused Products identified in the Infringement Chart for the ’677 Patent (First Amended Complaint Ex. 14 and the Domestic Industry Chart for the ’677 Patent (Samsung’s Initial Tech DI Contentions, dated March 17, 2026, Ex. 2), including features and functions relating to the capability of the Accused Products to capture and analyze movement, biological, and health data of a user.

18. “’675 accused features or functions” shall include features and functions in the Accused Products identified in the Infringement Chart for the ’675 Patent (First Amended Complaint Ex. 15 and the Domestic Industry Chart for the ’675 Patent (Samsung’s Initial Tech DI Contentions, dated March 17, 2026, Ex. 3), including features and functions relating to the capability of the Accused Products capture and analyze movement, biological, and health data of a user.

19. “’789 accused features or functions” shall include features and functions in the Accused Products identified in the Infringement Chart for the ’789 Patent (First Amended Complaint Ex. 16) and the Domestic Industry Chart for the ’789 Patent (Samsung’s Initial Tech DI Contentions, dated March 17, 2026, Ex. 4), including features and functions relating to the construction of the Accused Products, including the configuration of any printed circuit board (“PCB”) and other components.

20. “Accused Features or Functions” shall mean a combination of the ’359 accused features or functions, ’677 accused features or functions, ’675 accused features or functions, and ’789 accused features or functions.

21. “Investigation” means the investigation instituted by the United States International Trade Commission on January 14, 2026, captioned *Certain Wearable Devices*, and given Investigation No. 337-TA-1478.

22. “Complaint” refers to the First Amended Complaint filed by Complainants in this Investigation on January 2, 2026, and any amendments thereto for which the ALJ or Commission has granted leave to file.

23. “Prior Art” means the activities and information encompassed by 35 U.S.C. § 102 and 35 U.S.C. § 103.

24. “Identify” or “Identification,” when used with reference to a person, means the full name, address, telephone number, and email address of that person.

25. “Communicate,” “Communication,” and “Communications” mean any oral or written utterance, notation, or statement of any nature, by and to whomsoever made including but not limited to conversations, dialogues, discussions, interviews, consultations, agreements,

correspondence, letters, memoranda, notes, summaries, audio and video recordings, electronic communications, and other materials recording the interaction between one person and another.

26. “Document” shall have the broadest meaning allowable under Commission Rule 210.30, and includes any written, typed, printed, drawn or recorded material, however compiled or on whatever medium stored, including any photographic or other reproduction of any such material, including all non-identical copies of such Documents and including figures and drawings, either in sketch or printed form. Without limiting the generality of the foregoing, “Document” includes electronically stored information, including computer files and email communications.

27. “Thing” shall have the broadest meaning allowable under Commission Rule 210.30, and also includes tangible objects other than Documents including, without limitation, prototypes, models, or physical specimens thereof.

28. “Person(s),” includes any natural person, firm, proprietorship, partnership, joint venture, corporation, association, or other business entity and all present and former officers, directors, agents, employees, and others acting or purporting to act on behalf of such natural person, firm, proprietorship, partnership, joint venture, corporation, association, or other business entity.

29. “Publicly Available” means offered for sale, sold, distributed, displayed, demonstrated, described in any publication, or otherwise made accessible or known to the public.

30. “Relate,” “Relating to,” and “Related to” shall include and be interpreted as meaning comprising, pertaining to, recording, evidencing, refuting, constituting, containing, setting forth, reflecting, showing, disclosing, describing, analyzing, explaining, summarizing, concerning or referring to, whether directly or indirectly, whether in whole or in part. 30. The word “or” refers to the conjunctive/inclusive meanings, so as to include any information within the scope of any of the requests in which it is contained.

31. The use of the singular form of any word includes the plural and vice versa.
32. “Ahmed I” means U.S. Patent App. Pub. No. 2012/0078066, filed on December 2, 2011, and published on March 29, 2012.
33. “Kuroda I” means Japanese Patent App. Pub. No. 2009/195589, filed on February 25, 2008, and published on September 3, 2009.
34. “Kuroda II” means U.S. Patent App. Pub. No. 2008/0139952, filed on December 6, 2007, and published on June 12, 2008.
35. “Moon” means U.S. Patent No. 9,596,999, filed on September 14, 2009, and issued on March 21, 2017.
36. “Muzet” means Int’l Pub. No. WO 2012/156427 A1, filed on May 15, 2012, and published on November 22, 2012.
37. “Nakayama” means U.S. Patent App. Pub. No. 2008/0234785, filed on September 13, 2007, and published on September 25, 2008.
38. “Sakai” means U.S. Patent No. 7,507,207, filed on October 5, 2004, and issued on March 24, 2009.
39. “Suzuki I” means U.S. Patent No. 7,351,206, filed on January 31, 2005, and issued on April 1, 2008.
40. “Torre” means U.S. Patent App. Pub. No. 2015/0245777, filed on April 20, 2015, and published on September 3, 2015.
41. “Torre Provisional” means U.S. Provisional App. No. 61/716,405, filed on October 19, 2012.
42. “Yuen I” means U.S. Patent No. 8,954,135, filed on June 24, 2013, and issued on February 10, 2015.

43. “Picard” means U.S. Patent No. 8,140,143, filed on April 16, 2009, and issued on March 20, 2012.
44. “Suzuki II” means U.S. Patent App. Pub. No. 2009/0204011, filed on September 17, 2008, and published on August 13, 2009.
45. “Michiwaki” means U.S. Patent No. 6,841,738, filed on December 13, 2002, and issued on January 11, 2005.
46. “Langer” means U.S. Patent No. 8,705,905, filed on September 21, 2007, and issued on April 22, 2014.
47. “Drzaic” means U.S. Patent No. 9,756,733, filed on April 4, 2013, and issued on September 5, 2017.
48. “Aoyama” means U.S. Patent No. 8,383,948, filed on September 18, 2009, and issued on February 26, 2013.
49. “Han” means U.S. Patent Application Publication No. 2014/0147128, filed on November 26, 2012, and published on May 29, 2014.
50. “Naganuma” means U.S. Patent Application Publication No. 2012/0325524, filed on June 23, 2011, and published on December 27, 2012.
51. “Williams” means U.S. Patent No. 10,064,276, filed on October 21, 2015, and issued on August 28, 2017.
52. “Franklin” means U.S. Patent Application Publication No. 2013/083496, filed on September 30, 2011, and published on April 4, 2013.
53. “Cho” means U.S. Patent No. 10,727,568, filed on June 13, 2017, and issued on July 28, 2020.

54. “Kim” means U.S. Patent Application Publication No. 2019/0045630, published on February 7, 2019, with an effective filing date of February 26, 2016.
55. “Sekiguchi” means Japanese Application JP2004247616, filed on February 14, 2003 and published on September 2, 2004.
56. “Ganchrow” means U.S. Patent Application Publication No. 2017/0214121, published on January 25, 2017, with an effective filing date of January 26, 2016.
57. “Luo-Larson” means U.S. Patent Application Publication No. 2017/0332479, published on November 16, 2017, with an effective filing date of May 12, 2016.
58. “Ikemoto” means U.S. Patent Application Publication No. 2018/0151951, published on May 31, 2018, with an effective filing date of July 30, 2015.
59. “Mow” means U.S. Patent Application Publication No. 2015/0280771, published on October 1, 2015, with an effective filing date of July 6, 2010.
60. “Kim ’978” means Korean Application 10-2016-0022978, filed on February 25, 2016, and published on September 5, 2017.
61. “Ikemoto ’346” means Japanese Application 2015-151346, filed on July 30, 2015, and published on November 15, 2016.
62. “Ahmed” means U.S. Patent App. Pub. No. 2012/0078066, filed on December 2, 2011, and published on March 29, 2012.
63. “Kuroda I” means Japanese Patent App. Pub. No. 2009/195589, filed on February 25, 2008, and published on September 3, 2009.
64. “Kuroda II” means U.S. Patent App. Pub. No. 2008/0139952, filed on December 6, 2007, and published on June 12, 2008.

65. “Moon” means U.S. Patent No. 9,596,999, filed on September 14, 2009, and issued on March 21, 2017.

66. “Muzet” means Int’l Pub. No. WO 2012/156427 A1, filed on May 15, 2012, and published on November 22, 2012.

67. “Nakayama” means U.S. Patent App. Pub. No. 2008/0234785, filed on September 13, 2007 and published on September 25, 2008.

68. “Sakai” means U.S. Patent No. 7,507,207, filed on October 5, 2004 and issued on March 24, 2009.

69. “Suzuki I” means U.S. Patent No. 7,351,206, filed on January 31, 2005 and issued on April 1, 2008.

70. “Torre” means U.S. Patent App. Pub. No. 2015/0245777, filed on April 20, 2015 and published on September 3, 2015.

71. “Torre Provisional” means U.S. Provisional App. No. 61/716,405, filed on October 19, 2012.

72. “Yuen” means U.S. Patent No. 8,954,135, filed on June 24, 2013 and issued on February 10, 2015.

73. “Picard” means U.S. Patent No. 8,140,143, filed on April 16, 2009 and issued on March 20, 2012.

74. “Suzuki II” means U.S. Patent App. Pub. No. 2009/0204011, filed on September 17, 2008 and published on August 13, 2009.

75. “Dixon” means the printed publication: “Compressed Sensing System Considerations for ECG and EMG Wireless Biosensors,” IEEE Transactions on Biomedical Circuits and Systems, 6(2):156-166, by Dixon et al., published on April 16, 2012.

76. “Hong” means U.S. Patent No. 8,948,832, filed on May 30, 2014 and issued on February 3, 2015.
77. “Ahmed II” means U.S. Patent No. 10,264,982, filed on July 9, 2014 and issued on April 23, 2019.
78. “Kimball” means U.S. Patent No. 6,879,850, filed on March 15, 2002 and issued on April 12, 2005.
79. “Nishimiya” means Int’l Pub. No. WO 2011/024425A1, filed on August 23, 2010 and published on March 3, 2011.
80. “Utter II” means U.S. Patent App. Pub. No. 2015/0186609, filed on February 28, 2014 and published on July 2, 2015.
81. “Arnold” means U.S. Patent No. 9,808,185, filed on September 19, 2015 and issued on November 7, 2017.
82. “Doniwa” means U.S. Patent App. Pub. No. 2015/0362977, filed on October 8, 2014 and published on December 17, 2015.
83. “Kamitaki” means Japanese Patent App. Pub. No. 2013/150847, filed on April 2, 2013 and published on August 8, 2013.
84. “Schenk” means U.S. Patent App. Pub. No. 2012/0123226, filed on July 13, 2010 and published on May 7, 2012.
85. “Yuen II” means U.S. Patent App. Pub. No. 2014/0206954, filed on March 20, 2014 and published on July 7, 2014.
86. “Bologna” means U.S. Patent No. 9,332,940, filed on January 5, 2015 and issued on May 10, 2016.

87. “Lee I” means U.S. Patent App. Pub. No. 2015/0374310, filed on June 26, 2014 and published on December 31, 2015.
88. “Furuta” means U.S. Patent App. Pub. No. 2015/0173686, filed on December 22, 2014 and published on June 25, 2015.
89. “von Badinski” means U.S. Patent App. Pub. No. 2015/0220109, filed on November 28, 2014 and published on August 6, 2015.
90. “Ahmed III” means U.S. Patent App. Pub. No. 2014/0073486, filed on September 4, 2013 and published on March 13, 2014.
91. “Podhajsky” means U.S. Patent App. Pub. No. 2015/0088431, filed on September 19, 2014 and published on March 26, 2015.
92. “Patel” means U.S. Patent App. Pub. No. 2015/0371028, filed on August 21, 2014 and published on December 24, 2015.
93. “Lee II” means U.S. Patent No. 9,442,523, filed on July 25, 2014 and issued on September 13, 2016.
94. “Presura” means Int’l Pub. No. WO 2015/139980 A1, filed on March 13, 2014 and published on September 24, 2015.
95. “Wei” means the printed publication: “A New Wristband Wearable Sensor Using Adaptive Reduction Filter to Reduce Motion Artifact,” published May 30-31, 2008.
96. “Oura Ring 1” means the first-generation Oura Ring wearable device commercially available prior to August 12, 2015.
97. “iPhone 6” means the Apple iPhone 6 smartphone commercially available prior to June 13, 2016.

98. “Samsung Galaxy S5” means the Samsung Galaxy S5 smartphone commercially available prior to June 13, 2016.

99. “Basis B1 Band” means the Basis B1 Band wearable device available prior to August 20, 2013.

100. “Microsoft Band” means the Microsoft Band wearable device available prior to August 12, 2015.

101. “Apple Watch Series Zero” means the Apple Watch Series Zero wearable device available prior to August 12, 2015.

INSTRUCTIONS

1. The singular form of a word should be interpreted in the plural as well. Any pronoun shall be construed to refer to the masculine, feminine, or neuter gender as in each case is most appropriate. The words “and” and “or” shall be construed conjunctively or disjunctively, whichever makes the request most inclusive. The word “including” shall be without limitation. The terms “each” and “any” shall mean any and all.

2. In the event that You object to any request on the ground that it is vague and/or ambiguous, identify the particular words, terms or phrases that are asserted to make such request vague and/or ambiguous and specify the meaning actually attributed to You by such words for purposes of Your response thereto.

3. Pursuant to 19 C.F.R. § 210.31(b), your answers must either admit the matter in question, specifically deny it, or state in detail why you cannot truthfully admit or deny it. A denial must fairly respond to the substance of the matter, and when good faith requires that you qualify an answer or deny only a part of a matter, your answers must specify the part admitted and qualify or deny the rest. You may assert lack of knowledge or information as a reason for failing to admit or deny only if you state that you have made a reasonable inquiry and that the information you know or can readily obtain is insufficient to enable you to admit or deny.

4. Because these discovery requests are continuing under 19 C.F.R. § 210.27(f), You remain under a duty to supplement or amend any response herein.

REQUESTS FOR ADMISSION

REQUEST FOR ADMISSION 70:

Admit that the Samsung Galaxy S6 was described in a printed publication before June 13, 2016.

REQUEST FOR ADMISSION 71:

Admit that the Samsung Galaxy S6 was in public use before June 13, 2016.

REQUEST FOR ADMISSION 72:

Admit that the Samsung Galaxy S6 was on sale before June 13, 2016.

REQUEST FOR ADMISSION 73:

Admit that the Samsung Galaxy S6 was publicly available by June 13, 2016.

REQUEST FOR ADMISSION 74:

Admit that the Samsung Galaxy S6 is prior art to the '789 Patent.

REQUEST FOR ADMISSION 75:

Admit that the Samsung Galaxy S6 includes a portable communication device.

REQUEST FOR ADMISSION 76:

Admit that the Samsung Galaxy S6 includes a housing.

REQUEST FOR ADMISSION 77:

Admit that the Samsung Galaxy S6 includes at least two antennas.

REQUEST FOR ADMISSION 78:

Admit that the Samsung Galaxy S6 includes wireless communication circuitry.

REQUEST FOR ADMISSION 79:

Admit that the Samsung Galaxy S6 includes at least two PCBs.

REQUEST FOR ADMISSION 80:

Admit that the Samsung Galaxy S6 includes a PCB with multiple layers.

REQUEST FOR ADMISSION 81:

Admit that the Samsung Galaxy S6 includes a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 82:

Admit that the Samsung Galaxy S6 includes a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 83:

Admit that the Samsung Galaxy S6 discloses a PCB with alternating flexible and rigid portions, including at least two flexible portions and two rigid portions.

REQUEST FOR ADMISSION 84:

Admit that the Samsung Galaxy S6 discloses a PCB with alternating flexible and rigid portions, including at least two flexible portions and three rigid portions.

REQUEST FOR ADMISSION 85:

Admit that the Samsung Galaxy S6 includes signal lines and ground lines extending from a first PCB portion through a second and third PCB portion to a fourth PCB portion.

REQUEST FOR ADMISSION 86:

Admit that the Samsung Galaxy S6 includes a PCB with a first ground line at least partially spaced apart from the second ground line.

REQUEST FOR ADMISSION 87:

Admit that the Samsung Galaxy S6 includes a PCB with a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 88:

Admit that the Samsung Galaxy S6 includes a PCB with a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 89:

Admit that the Samsung Galaxy S6 includes two electrical components.

REQUEST FOR ADMISSION 90:

Admit that the Samsung Galaxy S6 includes a PCB with a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 91:

Admit that the Samsung Galaxy S6 includes a PCB with a second insulating layer forming a second exterior surface of the rigid PCB portion.

REQUEST FOR ADMISSION 92:

Admit that the Samsung Galaxy S6 includes a PCB with at least three insulating layers.

REQUEST FOR ADMISSION 93:

Admit that the Samsung Galaxy S6 includes a PCB with at least two conduction layers.

REQUEST FOR ADMISSION 94:

Admit that the Samsung Galaxy S6 includes a PCB where an insulating layer of a flexible PCB portion of the PCB includes a material different from the material of an insulating layer of a rigid PCB portion.

REQUEST FOR ADMISSION 95:

Admit that the Samsung Galaxy S6 includes a second insulating layer of a flexible PCB portion that is thicker than an insulating layer of a rigid PCB portion.

REQUEST FOR ADMISSION 96:

Admit that the Samsung Galaxy S6 includes a ground plate located below an insulating layer.

REQUEST FOR ADMISSION 97:

Admit that the Samsung Galaxy S6 includes a PCB with an insulating layer on which three ground lines and two signal lines are located.

REQUEST FOR ADMISSION 98:

Admit that the Samsung Galaxy S6 includes a ground plate electrically connected with a first ground line through a first conduction via formed in a first portion of the insulating layer, a second ground line through a second conduction via formed in a second portion of the insulating layer, and a third ground line through a third conduction via formed in a third portion of an insulating layer.

REQUEST FOR ADMISSION 99:

Admit that the Samsung Galaxy S6 includes a solder resist ink forming at least a part of an exterior surface of a portion of a PCB.

REQUEST FOR ADMISSION 100:

Admit that the Samsung Galaxy S6 includes a first connector for a connection with an antenna on a first PCB portion of a PCB.

REQUEST FOR ADMISSION 101:

Admit that the Samsung Galaxy S6 includes a second connector for a connection with wireless communication circuitry on a PCB portion of a PCB.

REQUEST FOR ADMISSION 102:

Admit that the Samsung Galaxy S6 includes a second connector in contact with an end of a first signal line and an end of a second signal line.

REQUEST FOR ADMISSION 103:

Admit that the Samsung Galaxy S6 includes a PCB on which wireless communication circuitry is located.

REQUEST FOR ADMISSION 104:

Admit that the Samsung Galaxy S6 includes a PCB with a rigid portion and a flexible portion, where the exterior surface of the rigid portion is made of a different material than the exterior surface of the flexible portion.

REQUEST FOR ADMISSION 105:

Admit that the Samsung Galaxy S6 Edge was described in a printed publication before June 13, 2016.

REQUEST FOR ADMISSION 106:

Admit that the Samsung Galaxy S6 Edge was in public use before June 13, 2016.

REQUEST FOR ADMISSION 107:

Admit that the Samsung Galaxy S6 Edge was on sale before June 13, 2016.

REQUEST FOR ADMISSION 108:

Admit that the Samsung Galaxy S6 Edge was publicly available by June 13, 2016.

REQUEST FOR ADMISSION 109:

Admit that the Samsung Galaxy S6 Edge is prior art to the '789 Patent.

REQUEST FOR ADMISSION 110:

Admit that the Samsung Galaxy S6 Edge includes a portable communication device.

REQUEST FOR ADMISSION 111:

Admit that the Samsung Galaxy S6 Edge includes a housing.

REQUEST FOR ADMISSION 112:

Admit that the Samsung Galaxy S6 Edge includes at least two antennas.

REQUEST FOR ADMISSION 113:

Admit that the Samsung Galaxy S6 Edge includes wireless communication circuitry.

REQUEST FOR ADMISSION 114:

Admit that the Samsung Galaxy S6 Edge includes at least two PCBs.

REQUEST FOR ADMISSION 115:

Admit that the Samsung Galaxy S6 Edge includes a PCB with multiple layers.

REQUEST FOR ADMISSION 116:

Admit that the Samsung Galaxy S6 Edge includes a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 117:

Admit that the Samsung Galaxy S6 Edge includes a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 118:

Admit that the Samsung Galaxy S6 Edge discloses a PCB with alternating flexible and rigid portions, including at least two flexible portions and two rigid portions.

REQUEST FOR ADMISSION 119:

Admit that the Samsung Galaxy S6 Edge discloses a PCB with alternating flexible and rigid portions, including at least two flexible portions and three rigid portions.

REQUEST FOR ADMISSION 120:

Admit that the Samsung Galaxy S6 Edge includes signal lines and ground lines extending from a first PCB portion through a second and third PCB portion to a fourth PCB portion.

REQUEST FOR ADMISSION 121:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a first ground line at least partially spaced apart from the second ground line.

REQUEST FOR ADMISSION 122:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 123:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 124:

Admit that the Samsung Galaxy S6 Edge includes two electrical components.

REQUEST FOR ADMISSION 125:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 126:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a second insulating layer forming a second exterior surface of the rigid PCB portion.

REQUEST FOR ADMISSION 127:

Admit that the Samsung Galaxy S6 Edge includes a PCB with at least three insulating layers.

REQUEST FOR ADMISSION 128:

Admit that the Samsung Galaxy S6 Edge includes a PCB with at least two conduction layers.

REQUEST FOR ADMISSION 129:

Admit that the Samsung Galaxy S6 Edge includes a PCB where an insulating layer of a flexible PCB portion of the PCB includes a material different from the material of an insulating layer of a rigid PCB portion.

REQUEST FOR ADMISSION 130:

Admit that the Samsung Galaxy S6 Edge includes a second insulating layer of a flexible PCB portion that is thicker than an insulating layer of a rigid PCB portion.

REQUEST FOR ADMISSION 131:

Admit that the Samsung Galaxy S6 Edge includes a ground plate located below an insulating layer.

REQUEST FOR ADMISSION 132:

Admit that the Samsung Galaxy S6 Edge includes a PCB with an insulating layer on which three ground lines and two signal lines are located.

REQUEST FOR ADMISSION 133:

Admit that the Samsung Galaxy S6 Edge includes a ground plate electrically connected with a first ground line through a first conduction via formed in a first portion of the insulating layer, a second ground line through a second conduction via formed in a second portion of the insulating layer, and a third ground line through a third conduction via formed in a third portion of an insulating layer.

REQUEST FOR ADMISSION 134:

Admit that the Samsung Galaxy S6 Edge includes a solder resist ink forming at least a part of an exterior surface of a portion of a PCB.

REQUEST FOR ADMISSION 135:

Admit that the Samsung Galaxy S6 Edge includes a first connector for a connection with an antenna on a first PCB portion of a PCB.

REQUEST FOR ADMISSION 136:

Admit that the Samsung Galaxy S6 Edge includes a second connector for a connection with wireless communication circuitry on a PCB portion of a PCB.

REQUEST FOR ADMISSION 137:

Admit that the Samsung Galaxy S6 Edge includes a second connector in contact with an end of a first signal line and an end of a second signal line.

REQUEST FOR ADMISSION 138:

Admit that the Samsung Galaxy S6 Edge includes a PCB on which wireless communication circuitry is located.

REQUEST FOR ADMISSION 139:

Admit that the Samsung Galaxy S6 Edge includes a PCB with a rigid portion and a flexible portion, where the exterior surface of the rigid portion is made of a different material than the exterior surface of the flexible portion.

REQUEST FOR ADMISSION 140:

Admit that Michiwaki is prior art to the '789 Patent.

REQUEST FOR ADMISSION 141:

Admit that Michiwaki discloses a portable communication device.

REQUEST FOR ADMISSION 142:

Admit that Michiwaki discloses a housing.

REQUEST FOR ADMISSION 143:

Admit that Michiwaki discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 144:

Admit that Michiwaki discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 145:

Admit that Michiwaki discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 146:

Admit that Michiwaki discloses wireless communication circuitry.

REQUEST FOR ADMISSION 147:

Admit that Michiwaki discloses a first PCB.

REQUEST FOR ADMISSION 148:

Admit that Michiwaki discloses a second PCB.

REQUEST FOR ADMISSION 149:

Admit that Michiwaki discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 150:

Admit that Michiwaki discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 151:

Admit that Michiwaki discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 152:

Admit that Michiwaki discloses a first PCB portion.

REQUEST FOR ADMISSION 153:

Admit that Michiwaki discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 154:

Admit that Michiwaki discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 155:

Admit that Michiwaki discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 156:

Admit that Michiwaki discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 157:

Admit that Michiwaki discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 158:

Admit that Michiwaki discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 159:

Admit that Michiwaki discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 160:

Admit that Michiwaki discloses a first ground line.

REQUEST FOR ADMISSION 161:

Admit that Michiwaki discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 162:

Admit that Michiwaki discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 163:

Admit that Michiwaki discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 164:

Admit that Michiwaki discloses a first electrical component.

REQUEST FOR ADMISSION 165:

Admit that Michiwaki discloses a second electrical component.

REQUEST FOR ADMISSION 166:

Admit that Michiwaki discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 167:

Admit that Michiwaki discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 168:

Admit that Michiwaki discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 169:

Admit that Michiwaki discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 170:

Admit that Michiwaki discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 171:

Admit that Michiwaki discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 172:

Admit that Michiwaki discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 173:

Admit that Michiwaki discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 174:

Admit that Michiwaki discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 175:

Admit that Michiwaki discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 176:

Admit that Michiwaki discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 177:

Admit that Michiwaki discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 178:

Admit that Michiwaki discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 179:

Admit that Michiwaki discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 180:

Admit that Michiwaki discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 181:

Admit that Michiwaki discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 182:

Admit that Michiwaki discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 183:

Admit that Michiwaki discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 184:

Admit that Michiwaki discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 185:

Admit that Michiwaki discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 186:

Admit that Michiwaki discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 187:

Admit that Michiwaki discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 188:

Admit that Michiwaki discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 189:

Admit that Michiwaki discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 190:

Admit that Langer is prior art to the '789 Patent.

REQUEST FOR ADMISSION 191:

Admit that Langer discloses a portable communication device.

REQUEST FOR ADMISSION 192:

Admit that Langer discloses a housing.

REQUEST FOR ADMISSION 193:

Admit that Langer discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 194:

Admit that Langer discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 195:

Admit that Langer discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 196:

Admit that Langer discloses wireless communication circuitry.

REQUEST FOR ADMISSION 197:

Admit that Langer discloses a first PCB.

REQUEST FOR ADMISSION 198:

Admit that Langer discloses a second PCB.

REQUEST FOR ADMISSION 199:

Admit that Langer discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 200:

Admit that Langer discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 201:

Admit that Langer discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 202:

Admit that Langer discloses a first PCB portion.

REQUEST FOR ADMISSION 203:

Admit that Langer discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 204:

Admit that Langer discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 205:

Admit that Langer discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 206:

Admit that Langer discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 207:

Admit that Langer discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 208:

Admit that Langer discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 209:

Admit that Langer discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 210:

Admit that Langer discloses a first ground line.

REQUEST FOR ADMISSION 211:

Admit that Langer discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 212:

Admit that Langer discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 213:

Admit that Langer discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 214:

Admit that Langer discloses a first electrical component.

REQUEST FOR ADMISSION 215:

Admit that Langer discloses a second electrical component.

REQUEST FOR ADMISSION 216:

Admit that Langer discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 217:

Admit that Langer discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 218:

Admit that Langer discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 219:

Admit that Langer discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 220:

Admit that Langer discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 221:

Admit that Langer discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 222:

Admit that Langer discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 223:

Admit that Langer discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 224:

Admit that Langer discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 225:

Admit that Langer discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 226:

Admit that Langer discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 227:

Admit that Langer discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 228:

Admit that Langer discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 229:

Admit that Langer discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 230:

Admit that Langer discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 231:

Admit that Langer discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 232:

Admit that Langer discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 233:

Admit that Langer discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 234:

Admit that Langer discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 235:

Admit that Langer discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 236:

Admit that Langer discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 237:

Admit that Langer discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 238:

Admit that Langer discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 239:

Admit that Langer discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 240:

Admit that Drzaic is prior art to the '789 Patent.

REQUEST FOR ADMISSION 241:

Admit that Drzaic discloses a portable communication device.

REQUEST FOR ADMISSION 242:

Admit that Drzaic discloses a housing.

REQUEST FOR ADMISSION 243:

Admit that Drzaic discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 244:

Admit that Drzaic discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 245:

Admit that Drzaic discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 246:

Admit that Drzaic discloses wireless communication circuitry.

REQUEST FOR ADMISSION 247:

Admit that Drzaic discloses a first PCB.

REQUEST FOR ADMISSION 248:

Admit that Drzaic discloses a second PCB.

REQUEST FOR ADMISSION 249:

Admit that Drzaic discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 250:

Admit that Drzaic discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 251:

Admit that Drzaic discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 252:

Admit that Drzaic discloses a first PCB portion.

REQUEST FOR ADMISSION 253:

Admit that Drzaic discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 254:

Admit that Drzaic discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 255:

Admit that Drzaic discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 256:

Admit that Drzaic discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 257:

Admit that Drzaic discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 258:

Admit that Drzaic discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 259:

Admit that Drzaic discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 260:

Admit that Drzaic discloses a first ground line.

REQUEST FOR ADMISSION 261:

Admit that Drzaic discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 262:

Admit that Drzaic discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 263:

Admit that Drzaic discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 264:

Admit that Drzaic discloses a first electrical component.

REQUEST FOR ADMISSION 265:

Admit that Drzaic discloses a second electrical component.

REQUEST FOR ADMISSION 266:

Admit that Drzaic discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 267:

Admit that Drzaic discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 268:

Admit that Drzaic discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 269:

Admit that Drzaic discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 270:

Admit that Drzaic discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 271:

Admit that Drzaic discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 272:

Admit that Drzaic discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 273:

Admit that Drzaic discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 274:

Admit that Drzaic discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 275:

Admit that Drzaic discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 276:

Admit that Drzaic discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 277:

Admit that Drzaic discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 278:

Admit that Drzaic discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 279:

Admit that Drzaic discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 280:

Admit that Drzaic discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 281:

Admit that Drzaic discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 282:

Admit that Drzaic discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 283:

Admit that Drzaic discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 284:

Admit that Drzaic discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 285:

Admit that Drzaic discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 286:

Admit that Drzaic discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 287:

Admit that Drzaic discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 288:

Admit that Drzaic discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 289:

Admit that Drzaic discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 290:

Admit that Aoyama is prior art to the '789 Patent.

REQUEST FOR ADMISSION 291:

Admit that Aoyama discloses a portable communication device.

REQUEST FOR ADMISSION 292:

Admit that Aoyama discloses a housing.

REQUEST FOR ADMISSION 293:

Admit that Aoyama discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 294:

Admit that Aoyama discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 295:

Admit that Aoyama discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 296:

Admit that Aoyama discloses wireless communication circuitry.

REQUEST FOR ADMISSION 297:

Admit that Aoyama discloses a first PCB.

REQUEST FOR ADMISSION 298:

Admit that Aoyama discloses a second PCB.

REQUEST FOR ADMISSION 299:

Admit that Aoyama discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 300:

Admit that Aoyama discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 301:

Admit that Aoyama discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 302:

Admit that Aoyama discloses a first PCB portion.

REQUEST FOR ADMISSION 303:

Admit that Aoyama discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 304:

Admit that Aoyama discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 305:

Admit that Aoyama discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 306:

Admit that Aoyama discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 307:

Admit that Aoyama discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 308:

Admit that Aoyama discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 309:

Admit that Aoyama discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 310:

Admit that Aoyama discloses a first ground line.

REQUEST FOR ADMISSION 311:

Admit that Aoyama discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 312:

Admit that Aoyama discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 313:

Admit that Aoyama discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 314:

Admit that Aoyama discloses a first electrical component.

REQUEST FOR ADMISSION 315:

Admit that Aoyama discloses a second electrical component.

REQUEST FOR ADMISSION 316:

Admit that Aoyama discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 317:

Admit that Aoyama discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 318:

Admit that Aoyama discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 319:

Admit that Aoyama discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 320:

Admit that Aoyama discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 321:

Admit that Aoyama discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 322:

Admit that Aoyama discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 323:

Admit that Aoyama discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 324:

Admit that Aoyama discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 325:

Admit that Aoyama discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 326:

Admit that Aoyama discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 327:

Admit that Aoyama discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 328:

Admit that Aoyama discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 329:

Admit that Aoyama discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 330:

Admit that Aoyama discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 331:

Admit that Aoyama discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 332:

Admit that Aoyama discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 333:

Admit that Aoyama discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 334:

Admit that Aoyama discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 335:

Admit that Aoyama discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 336:

Admit that Aoyama discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 337:

Admit that Aoyama discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 338:

Admit that Aoyama discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 339:

Admit that Aoyama discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 340:

Admit that Han is prior art to the '789 Patent.

REQUEST FOR ADMISSION 341:

Admit that Han discloses a portable communication device.

REQUEST FOR ADMISSION 342:

Admit that Han discloses a housing.

REQUEST FOR ADMISSION 343:

Admit that Han discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 344:

Admit that Han discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 345:

Admit that Han discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 346:

Admit that Han discloses wireless communication circuitry.

REQUEST FOR ADMISSION 347:

Admit that Han discloses a first PCB.

REQUEST FOR ADMISSION 348:

Admit that Han discloses a second PCB.

REQUEST FOR ADMISSION 349:

Admit that Han discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 350:

Admit that Han discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 351:

Admit that Han discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 352:

Admit that Han discloses a first PCB portion.

REQUEST FOR ADMISSION 353:

Admit that Han discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 354:

Admit that Han discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 355:

Admit that Han discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 356:

Admit that Han discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 357:

Admit that Han discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 358:

Admit that Han discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 359:

Admit that Han discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 360:

Admit that Han discloses a first ground line.

REQUEST FOR ADMISSION 361:

Admit that Han discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 362:

Admit that Han discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 363:

Admit that Han discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 364:

Admit that Han discloses a first electrical component.

REQUEST FOR ADMISSION 365:

Admit that Han discloses a second electrical component.

REQUEST FOR ADMISSION 366:

Admit that Han discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 367:

Admit that Han discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 368:

Admit that Han discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 369:

Admit that Han discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 370:

Admit that Han discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 371:

Admit that Han discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 372:

Admit that Han discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 373:

Admit that Han discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 374:

Admit that Han discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 375:

Admit that Han discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 376:

Admit that Han discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 377:

Admit that Han discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 378:

Admit that Han discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 379:

Admit that Han discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 380:

Admit that Han discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 381:

Admit that Han discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 382:

Admit that Han discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 383:

Admit that Han discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 384:

Admit that Han discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 385:

Admit that Han discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 386:

Admit that Han discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 387:

Admit that Han discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 388:

Admit that Han discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and

the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 389:

Admit that Han discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 390:

Admit that Naganuma is prior art to the '789 Patent.

REQUEST FOR ADMISSION 391:

Admit that Naganuma discloses a portable communication device.

REQUEST FOR ADMISSION 392:

Admit that Naganuma discloses a housing.

REQUEST FOR ADMISSION 393:

Admit that Naganuma discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 394:

Admit that Naganuma discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 395:

Admit that Naganuma discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 396:

Admit that Naganuma discloses wireless communication circuitry.

REQUEST FOR ADMISSION 397:

Admit that Naganuma discloses a first PCB.

REQUEST FOR ADMISSION 398:

Admit that Naganuma discloses a second PCB.

REQUEST FOR ADMISSION 399:

Admit that Naganuma discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 400:

Admit that Naganuma discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 401:

Admit that Naganuma discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 402:

Admit that Naganuma discloses a first PCB portion.

REQUEST FOR ADMISSION 403:

Admit that Naganuma discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 404:

Admit that Naganuma discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 405:

Admit that Naganuma discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 406:

Admit that Naganuma discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 407:

Admit that Naganuma discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 408:

Admit that Naganuma discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 409:

Admit that Naganuma discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 410:

Admit that Naganuma discloses a first ground line.

REQUEST FOR ADMISSION 411:

Admit that Naganuma discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 412:

Admit that Naganuma discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 413:

Admit that Naganuma discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 414:

Admit that Naganuma discloses a first electrical component.

REQUEST FOR ADMISSION 415:

Admit that Naganuma discloses a second electrical component.

REQUEST FOR ADMISSION 416:

Admit that Naganuma discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 417:

Admit that Naganuma discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 418:

Admit that Naganuma discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 419:

Admit that Naganuma discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 420:

Admit that Naganuma discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 421:

Admit that Naganuma discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 422:

Admit that Naganuma discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 423:

Admit that Naganuma discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 424:

Admit that Naganuma discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 425:

Admit that Naganuma discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 426:

Admit that Naganuma discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 427:

Admit that Naganuma discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 428:

Admit that Naganuma discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 429:

Admit that Naganuma discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 430:

Admit that Naganuma discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 431:

Admit that Naganuma discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 432:

Admit that Naganuma discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 433:

Admit that Naganuma discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 434:

Admit that Naganuma discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 435:

Admit that Naganuma discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 436:

Admit that Naganuma discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 437:

Admit that Naganuma discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 438:

Admit that Naganuma discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 439:

Admit that Naganuma discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 440:

Admit that Williams is prior art to the '789 Patent.

REQUEST FOR ADMISSION 441:

Admit that Williams discloses a portable communication device.

REQUEST FOR ADMISSION 442:

Admit that Williams discloses a housing.

REQUEST FOR ADMISSION 443:

Admit that Williams discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 444:

Admit that Williams discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 445:

Admit that Williams discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 446:

Admit that Williams discloses wireless communication circuitry.

REQUEST FOR ADMISSION 447:

Admit that Williams discloses a first PCB.

REQUEST FOR ADMISSION 448:

Admit that Williams discloses a second PCB.

REQUEST FOR ADMISSION 449:

Admit that Williams discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 450:

Admit that Williams discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 451:

Admit that Williams discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 452:

Admit that Williams discloses a first PCB portion.

REQUEST FOR ADMISSION 453:

Admit that Williams discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 454:

Admit that Williams discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 455:

Admit that Williams discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 456:

Admit that Williams discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 457:

Admit that Williams discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 458:

Admit that Williams discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 459:

Admit that Williams discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 460:

Admit that Williams discloses a first ground line.

REQUEST FOR ADMISSION 461:

Admit that Williams discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 462:

Admit that Williams discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 463:

Admit that Williams discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 464:

Admit that Williams discloses a first electrical component.

REQUEST FOR ADMISSION 465:

Admit that Williams discloses a second electrical component.

REQUEST FOR ADMISSION 466:

Admit that Williams discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 467:

Admit that Williams discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 468:

Admit that Williams discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 469:

Admit that Williams discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 470:

Admit that Williams discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 471:

Admit that Williams discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 472:

Admit that Williams discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 473:

Admit that Williams discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 474:

Admit that Williams discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 475:

Admit that Williams discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 476:

Admit that Williams discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 477:

Admit that Williams discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 478:

Admit that Williams discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 479:

Admit that Williams discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 480:

Admit that Williams discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 481:

Admit that Williams discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 482:

Admit that Williams discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 483:

Admit that Williams discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 484:

Admit that Williams discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 485:

Admit that Williams discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 486:

Admit that Williams discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 487:

Admit that Williams discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 488:

Admit that Williams discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 489:

Admit that Williams discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 490:

Admit that Franklin is prior art to the '789 Patent.

REQUEST FOR ADMISSION 491:

Admit that Franklin discloses a portable communication device.

REQUEST FOR ADMISSION 492:

Admit that Franklin discloses a housing.

REQUEST FOR ADMISSION 493:

Admit that Franklin discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 494:

Admit that Franklin discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 495:

Admit that Franklin discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 496:

Admit that Franklin discloses wireless communication circuitry.

REQUEST FOR ADMISSION 497:

Admit that Franklin discloses a first PCB.

REQUEST FOR ADMISSION 498:

Admit that Franklin discloses a second PCB.

REQUEST FOR ADMISSION 499:

Admit that Franklin discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 500:

Admit that Franklin discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 501:

Admit that Franklin discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 502:

Admit that Franklin discloses a first PCB portion.

REQUEST FOR ADMISSION 503:

Admit that Franklin discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 504:

Admit that Franklin discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 505:

Admit that Franklin discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 506:

Admit that Franklin discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 507:

Admit that Franklin discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 508:

Admit that Franklin discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 509:

Admit that Franklin discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 510:

Admit that Franklin discloses a first ground line.

REQUEST FOR ADMISSION 511:

Admit that Franklin discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 512:

Admit that Franklin discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 513:

Admit that Franklin discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 514:

Admit that Franklin discloses a first electrical component.

REQUEST FOR ADMISSION 515:

Admit that Franklin discloses a second electrical component.

REQUEST FOR ADMISSION 516:

Admit that Franklin discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 517:

Admit that Franklin discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 518:

Admit that Franklin discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 519:

Admit that Franklin discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 520:

Admit that Franklin discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 521:

Admit that Franklin discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 522:

Admit that Franklin discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 523:

Admit that Franklin discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 524:

Admit that Franklin discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 525:

Admit that Franklin discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 526:

Admit that Franklin discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 527:

Admit that Franklin discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 528:

Admit that Franklin discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 529:

Admit that Franklin discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 530:

Admit that Franklin discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 531:

Admit that Franklin discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 532:

Admit that Franklin discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 533:

Admit that Franklin discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 534:

Admit that Franklin discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 535:

Admit that Franklin discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 536:

Admit that Franklin discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 537:

Admit that Franklin discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 538:

Admit that Franklin discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 539:

Admit that Franklin discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 540:

Admit that the Oura Ring 1 was described in a printed publication before June 13, 2016.

REQUEST FOR ADMISSION 541:

Admit that the Oura Ring 1 was in public use before June 13, 2016.

REQUEST FOR ADMISSION 542:

Admit that the Oura Ring 1 was on sale before June 13, 2016.

REQUEST FOR ADMISSION 543:

Admit that the Oura Ring 1 was available to the public before June 13, 2016.

REQUEST FOR ADMISSION 544:

Admit that the Oura Ring 1 is prior art to the '789 Patent.

REQUEST FOR ADMISSION 545:

Admit that the Oura Ring 1 discloses a portable communication device.

REQUEST FOR ADMISSION 546:

Admit that the Oura Ring 1 discloses a housing.

REQUEST FOR ADMISSION 547:

Admit that the Oura Ring 1 discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 548:

Admit that the Oura Ring 1 discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 549:

Admit that the Oura Ring 1 discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 550:

Admit that the Oura Ring 1 discloses wireless communication circuitry.

REQUEST FOR ADMISSION 551:

Admit that the Oura Ring 1 discloses a first PCB.

REQUEST FOR ADMISSION 552:

Admit that the Oura Ring 1 discloses a second PCB.

REQUEST FOR ADMISSION 553:

Admit that the Oura Ring 1 discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 554:

Admit that the Oura Ring 1 discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 555:

Admit that the Oura Ring 1 discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 556:

Admit that the Oura Ring 1 discloses a first PCB portion.

REQUEST FOR ADMISSION 557:

Admit that the Oura Ring 1 discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 558:

Admit that the Oura Ring 1 discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 559:

Admit that the Oura Ring 1 discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 560:

Admit that the Oura Ring 1 discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 561:

Admit that the Oura Ring 1 discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 562:

Admit that the Oura Ring 1 discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 563:

Admit that the Oura Ring 1 discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 564:

Admit that the Oura Ring 1 discloses a first ground line.

REQUEST FOR ADMISSION 565:

Admit that the Oura Ring 1 discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 566:

Admit that the Oura Ring 1 discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 567:

Admit that the Oura Ring 1 discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 568:

Admit that the Oura Ring 1 discloses a first electrical component.

REQUEST FOR ADMISSION 569:

Admit that the Oura Ring 1 discloses a second electrical component.

REQUEST FOR ADMISSION 570:

Admit that the Oura Ring 1 discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 571:

Admit that the Oura Ring 1 discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 572:

Admit that the Oura Ring 1 discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 573:

Admit that the Oura Ring 1 discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 574:

Admit that the Oura Ring 1 discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 575:

Admit that the Oura Ring 1 discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 576:

Admit that the Oura Ring 1 discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 577:

Admit that the Oura Ring 1 discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 578:

Admit that the Oura Ring 1 discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 579:

Admit that the Oura Ring 1 discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 580:

Admit that the Oura Ring 1 discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 581:

Admit that the Oura Ring 1 discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 582:

Admit that the Oura Ring 1 discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 583:

Admit that the Oura Ring 1 discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 584:

Admit that the Oura Ring 1 discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 585:

Admit that the Oura Ring 1 discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 586:

Admit that the Oura Ring 1 discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 587:

Admit that the Oura Ring 1 discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 588:

Admit that the Oura Ring 1 discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 589:

Admit that the Oura Ring 1 discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 590:

Admit that the Oura Ring 1 discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 591:

Admit that the Oura Ring 1 discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 592:

Admit that the Oura Ring 1 discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 593:

Admit that the Oura Ring 1 discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 594:

Admit that the iPhone 6 discloses a portable communication device.

REQUEST FOR ADMISSION 595:

Admit that the iPhone 6 discloses a housing.

REQUEST FOR ADMISSION 596:

Admit that the iPhone 6 discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 597:

Admit that the iPhone 6 discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 598:

Admit that the iPhone 6 discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 599:

Admit that the iPhone 6 discloses wireless communication circuitry.

REQUEST FOR ADMISSION 600:

Admit that the iPhone 6 discloses a first PCB.

REQUEST FOR ADMISSION 601:

Admit that the iPhone 6 discloses a second PCB.

REQUEST FOR ADMISSION 602:

Admit that the iPhone 6 discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 603:

Admit that the iPhone 6 discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 604:

Admit that the iPhone 6 discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 605:

Admit that the iPhone 6 discloses a first PCB portion.

REQUEST FOR ADMISSION 606:

Admit that the iPhone 6 discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 607:

Admit that the iPhone 6 discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 608:

Admit that the iPhone 6 discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 609:

Admit that the iPhone 6 discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 610:

Admit that the iPhone 6 discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 611:

Admit that the iPhone 6 discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 612:

Admit that the iPhone 6 discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 613:

Admit that the iPhone 6 discloses a first ground line.

REQUEST FOR ADMISSION 614:

Admit that the iPhone 6 discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 615:

Admit that the iPhone 6 discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 616:

Admit that the iPhone 6 discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 617:

Admit that the iPhone 6 discloses a first electrical component.

REQUEST FOR ADMISSION 618:

Admit that the iPhone 6 discloses a second electrical component.

REQUEST FOR ADMISSION 619:

Admit that the iPhone 6 discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 620:

Admit that the iPhone 6 discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 621:

Admit that the iPhone 6 discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 622:

Admit that the iPhone 6 discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 623:

Admit that the iPhone 6 discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 624:

Admit that the iPhone 6 discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 625:

Admit that the iPhone 6 discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 626:

Admit that the iPhone 6 discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 627:

Admit that the iPhone 6 discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 628:

Admit that the iPhone 6 discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 629:

Admit that the iPhone 6 discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 630:

Admit that the iPhone 6 discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 631:

Admit that the iPhone 6 discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 632:

Admit that the iPhone 6 discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 633:

Admit that the iPhone 6 discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 634:

Admit that the iPhone 6 discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 635:

Admit that the iPhone 6 discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 636:

Admit that the iPhone 6 discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 637:

Admit that the iPhone 6 discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 638:

Admit that the iPhone 6 discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 639:

Admit that the iPhone 6 discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 640:

Admit that the iPhone 6 discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 641:

Admit that the iPhone 6 discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 642:

Admit that the iPhone 6 discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 643:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of portable communication devices comprising a housing and a printed circuit board in the housing.

REQUEST FOR ADMISSION 644:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of PCBs including a plurality of layers with a plurality of conductive layers and a plurality of insulation layers.

REQUEST FOR ADMISSION 645:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of PCBs comprising both rigid PCB portions and flexible PCB portions.

REQUEST FOR ADMISSION 646:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a flexible PCB portion in contact with a rigid PCB portion.

REQUEST FOR ADMISSION 647:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of ground lines disposed around an electrical path in a PCB.

REQUEST FOR ADMISSION 648:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a plurality of lines including ground lines and signal lines disposed on a PCB.

REQUEST FOR ADMISSION 649:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of conductive vias in a rigid PCB portion connecting grounds between a plurality of layers.

REQUEST FOR ADMISSION 650:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a first ground line and a second ground line at least partially spaced apart from the first ground line, a first signal line located between the first ground line and the second ground line, and a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 651:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of ground lines shielding an electrical path for transmitting high-frequency signals.

REQUEST FOR ADMISSION 652:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of using solder resist ink as an insulating material forming an exterior surface of a PCB.

REQUEST FOR ADMISSION 653:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of using polyimide as an insulating material in flexible PCB portions.

REQUEST FOR ADMISSION 654:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of an electronic device including an antenna formed as at least a part of a metal housing.

REQUEST FOR ADMISSION 655:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of wireless communication circuitry in a portable communication device.

REQUEST FOR ADMISSION 656:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of signal lines electrically connected with an antenna and wireless communication circuitry in a portable communication device.

REQUEST FOR ADMISSION 657:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a third ground line located between a first signal line and a second signal line in a PCB.

REQUEST FOR ADMISSION 658:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of an insulating layer on which ground lines and signal lines are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 659:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a ground plate electrically connected with ground lines through conduction vias formed in an insulating layer.

REQUEST FOR ADMISSION 660:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a fifth PCB portion in contact with a fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 661:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of connectors for connecting an antenna and wireless communication circuitry to a PCB.

REQUEST FOR ADMISSION 662:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a second PCB on which wireless communication circuitry is located.

REQUEST FOR ADMISSION 663:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of ground lines electrically connected with a ground member.

REQUEST FOR ADMISSION 664:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a fourth insulating layer located between a second conduction layer and a third insulating layer in a flexible PCB portion, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 665:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew that a fourth insulating layer in a flexible PCB portion could include the same material as the first and third insulating layers of the flexible PCB portion.

REQUEST FOR ADMISSION 666:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a printed circuit board (PCB) electrically connected with a first electronic component and a second electronic component.

REQUEST FOR ADMISSION 667:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a first conduction layer of a flexible PCB portion electrically connected with the first conduction layer of a first rigid PCB portion and the first conduction layer of a second rigid PCB portion.

REQUEST FOR ADMISSION 668:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a second conduction layer of a flexible PCB portion electrically connected with the second conduction layer of the first rigid PCB portion and the second conduction layer of the second rigid PCB portion.

REQUEST FOR ADMISSION 669:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a third insulating layer of a flexible PCB portion including a second material different from the first material and forming a second exterior surface of the flexible PCB portion.

REQUEST FOR ADMISSION 670:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a housing including a first conduction portion forming a first portion of a side surface of a portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 671:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a first PCB including a first PCB portion, a second PCB portion in contact with the first PCB portion and being more flexible than the first PCB portion, a third PCB portion in contact with the second PCB portion and being less flexible than the second PCB portion, and a fourth PCB portion in contact with the third PCB portion and being more flexible than the third PCB portion.

REQUEST FOR ADMISSION 672:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion, the plurality of lines including a first ground line, a second ground line at least partially spaced apart from the first ground line, a first signal line located between the first ground line and the second ground line, and a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 673:

Admit that the person having ordinary skill in the art before the earliest effective filing date of the '789 Patent knew of a first signal line electrically connected with a first antenna and

wireless communication circuitry, and a second signal line electrically connected with a second antenna and the wireless communication circuitry.

REQUEST FOR ADMISSION 674:

Admit that Kuroda I is prior art to the '359 patent.

REQUEST FOR ADMISSION 675:

Admit that Kuroda I discloses a wearable device.

REQUEST FOR ADMISSION 676:

Admit that Kuroda I discloses a motion sensor.

REQUEST FOR ADMISSION 677:

Admit that Kuroda I discloses a biological sensor.

REQUEST FOR ADMISSION 678:

Admit that Kuroda I discloses a controller.

REQUEST FOR ADMISSION 679:

Admit that Kuroda I discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 680:

Admit that Kuroda I discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 681:

Admit that Kuroda I discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 682:

Admit that Kuroda I discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 683:

Admit that Kuroda I discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 684:

Admit that Kuroda I discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 685:

Admit that Kuroda I discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 686:

Admit that Kuroda I discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 687:

Admit that Kuroda I discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 688:

Admit that Kuroda I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 689:

Admit that Kuroda I discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 690:

Admit that Kuroda I discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 691:

Admit that Kuroda I discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 692:

Admit that Kuroda I discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 693:

Admit that Kuroda I discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 694:

Admit that Kuroda I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 695:

Admit that Kuroda I discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 696:

Admit that Kuroda I discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 697:

Admit that Kuroda II is prior art to the '359 patent.

REQUEST FOR ADMISSION 698:

Admit that Kuroda II discloses a wearable device.

REQUEST FOR ADMISSION 699:

Admit that Kuroda II discloses a motion sensor.

REQUEST FOR ADMISSION 700:

Admit that Kuroda II discloses a biological sensor.

REQUEST FOR ADMISSION 701:

Admit that Kuroda II discloses a controller.

REQUEST FOR ADMISSION 702:

Admit that Kuroda II discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 703:

Admit that Kuroda II discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 704:

Admit that Kuroda II discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 705:

Admit that Kuroda II discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 706:

Admit that Kuroda II discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 707:

Admit that Kuroda II discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 708:

Admit that Kuroda II discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 709:

Admit that Kuroda II discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 710:

Admit that Kuroda II discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 711:

Admit that Kuroda II discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 712:

Admit that Kuroda II discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 713:

Admit that Kuroda II discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 714:

Admit that Kuroda II discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 715:

Admit that Kuroda II discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 716:

Admit that Kuroda II discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 717:

Admit that Kuroda II discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 718:

Admit that Kuroda II discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 719:

Admit that Kuroda II discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 720:

Admit that Ahmed I is prior art to the '359 patent.

REQUEST FOR ADMISSION 721:

Admit that Ahmed I discloses a wearable device.

REQUEST FOR ADMISSION 722:

Admit that Ahmed I discloses a motion sensor.

REQUEST FOR ADMISSION 723:

Admit that Ahmed I discloses a biological sensor.

REQUEST FOR ADMISSION 724:

Admit that Ahmed I discloses a controller.

REQUEST FOR ADMISSION 725:

Admit that Ahmed I discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 726:

Admit that Ahmed I discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 727:

Admit that Ahmed I discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 728:

Admit that Ahmed I discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 729:

Admit that Ahmed I discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 730:

Admit that Ahmed I discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 731:

Admit that Ahmed I discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 732:

Admit that Ahmed I discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 733:

Admit that Ahmed I discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 734:

Admit that Ahmed I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 735:

Admit that Ahmed I discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 736:

Admit that Ahmed I discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 737:

Admit that Ahmed I discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 738:

Admit that Ahmed I discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 739:

Admit that Ahmed I discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 740:

Admit that Ahmed I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 741:

Admit that Ahmed I discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 742:

Admit that Ahmed I discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 743:

Admit that Moon is prior art to the '359 patent.

REQUEST FOR ADMISSION 744:

Admit that Moon discloses a wearable device.

REQUEST FOR ADMISSION 745:

Admit that Moon discloses a motion sensor.

REQUEST FOR ADMISSION 746:

Admit that Moon discloses a biological sensor.

REQUEST FOR ADMISSION 747:

Admit that Moon discloses a controller.

REQUEST FOR ADMISSION 748:

Admit that Moon discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 749:

Admit that Moon discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 750:

Admit that Moon discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 751:

Admit that Moon discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 752:

Admit that Moon discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 753:

Admit that Moon discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 754:

Admit that Moon discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 755:

Admit that Moon discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 756:

Admit that Moon discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 757:

Admit that Moon discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 758:

Admit that Moon discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 759:

Admit that Moon discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 760:

Admit that Moon discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 761:

Admit that Moon discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 762:

Admit that Moon discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 763:

Admit that Moon discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 764:

Admit that Moon discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 765:

Admit that Moon discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 766:

Admit that Muzet is prior art to the '359 patent.

REQUEST FOR ADMISSION 767:

Admit that Muzet discloses a wearable device.

REQUEST FOR ADMISSION 768:

Admit that Muzet discloses a motion sensor.

REQUEST FOR ADMISSION 769:

Admit that Muzet discloses a biological sensor.

REQUEST FOR ADMISSION 770:

Admit that Muzet discloses a controller.

REQUEST FOR ADMISSION 771:

Admit that Muzet discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 772:

Admit that Muzet discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 773:

Admit that Muzet discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 774:

Admit that Muzet discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 775:

Admit that Muzet discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 776:

Admit that Muzet discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 777:

Admit that Muzet discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 778:

Admit that Muzet discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 779:

Admit that Muzet discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 780:

Admit that Muzet discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 781:

Admit that Muzet discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 782:

Admit that Muzet discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 783:

Admit that Muzet discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 784:

Admit that Muzet discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 785:

Admit that Muzet discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 786:

Admit that Muzet discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 787:

Admit that Muzet discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 788:

Admit that Muzet discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 789:

Admit that Nakayama is prior art to the '359 patent.

REQUEST FOR ADMISSION 790:

Admit that Nakayama discloses a wearable device.

REQUEST FOR ADMISSION 791:

Admit that Nakayama discloses a motion sensor.

REQUEST FOR ADMISSION 792:

Admit that Nakayama discloses a biological sensor.

REQUEST FOR ADMISSION 793:

Admit that Nakayama discloses a controller.

REQUEST FOR ADMISSION 794:

Admit that Nakayama discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 795:

Admit that Nakayama discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 796:

Admit that Nakayama discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 797:

Admit that Nakayama discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 798:

Admit that Nakayama discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 799:

Admit that Nakayama discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 800:

Admit that Nakayama discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 801:

Admit that Nakayama discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 802:

Admit that Nakayama discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 803:

Admit that Nakayama discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 804:

Admit that Nakayama discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 805:

Admit that Nakayama discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 806:

Admit that Nakayama discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 807:

Admit that Nakayama discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 808:

Admit that Nakayama discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 809:

Admit that Nakayama discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 810:

Admit that Nakayama discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 811:

Admit that Nakayama discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 812:

Admit that Sakai is prior art to the '359 patent.

REQUEST FOR ADMISSION 813:

Admit that Sakai discloses a wearable device.

REQUEST FOR ADMISSION 814:

Admit that Sakai discloses a motion sensor.

REQUEST FOR ADMISSION 815:

Admit that Sakai discloses a biological sensor.

REQUEST FOR ADMISSION 816:

Admit that Sakai discloses a controller.

REQUEST FOR ADMISSION 817:

Admit that Sakai discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 818:

Admit that Sakai discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 819:

Admit that Sakai discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 820:

Admit that Sakai discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 821:

Admit that Sakai discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 822:

Admit that Sakai discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 823:

Admit that Sakai discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 824:

Admit that Sakai discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 825:

Admit that Sakai discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 826:

Admit that Sakai discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 827:

Admit that Sakai discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 828:

Admit that Sakai discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 829:

Admit that Sakai discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 830:

Admit that Sakai discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 831:

Admit that Sakai discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 832:

Admit that Sakai discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 833:

Admit that Sakai discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 834:

Admit that Sakai discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 835:

Admit that Suzuki I is prior art to the '359 patent.

REQUEST FOR ADMISSION 836:

Admit that Suzuki I discloses a wearable device.

REQUEST FOR ADMISSION 837:

Admit that Suzuki I discloses a motion sensor.

REQUEST FOR ADMISSION 838:

Admit that Suzuki I discloses a biological sensor.

REQUEST FOR ADMISSION 839:

Admit that Suzuki I discloses a controller.

REQUEST FOR ADMISSION 840:

Admit that Suzuki I discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 841:

Admit that Suzuki I discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 842:

Admit that Suzuki I discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 843:

Admit that Suzuki I discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 844:

Admit that Suzuki I discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 845:

Admit that Suzuki I discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 846:

Admit that Suzuki I discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 847:

Admit that Suzuki I discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 848:

Admit that Suzuki I discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 849:

Admit that Suzuki I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 850:

Admit that Suzuki I discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 851:

Admit that Suzuki I discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 852:

Admit that Suzuki I discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 853:

Admit that Suzuki I discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 854:

Admit that Suzuki I discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 855:

Admit that Suzuki I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 856:

Admit that Suzuki I discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 857:

Admit that Suzuki I discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 858:

Admit that Torre is prior art to the '359 patent.

REQUEST FOR ADMISSION 859:

Admit that Torre discloses a wearable device.

REQUEST FOR ADMISSION 860:

Admit that Torre discloses a motion sensor.

REQUEST FOR ADMISSION 861:

Admit that Torre discloses a biological sensor.

REQUEST FOR ADMISSION 862:

Admit that Torre discloses a controller.

REQUEST FOR ADMISSION 863:

Admit that Torre discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 864:

Admit that Torre discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 865:

Admit that Torre discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 866:

Admit that Torre discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 867:

Admit that Torre discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 868:

Admit that Torre discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 869:

Admit that Torre discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 870:

Admit that Torre discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 871:

Admit that Torre discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 872:

Admit that Torre discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 873:

Admit that Torre discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 874:

Admit that Torre discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 875:

Admit that Torre discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 876:

Admit that Torre discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 877:

Admit that Torre discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 878:

Admit that Torre discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 879:

Admit that Torre discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 880:

Admit that Torre discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 881:

Admit that Torre Provisional is prior art to the '359 patent.

REQUEST FOR ADMISSION 882:

Admit that Torre Provisional discloses a wearable device.

REQUEST FOR ADMISSION 883:

Admit that Torre Provisional discloses a motion sensor.

REQUEST FOR ADMISSION 884:

Admit that Torre Provisional discloses a biological sensor.

REQUEST FOR ADMISSION 885:

Admit that Torre Provisional discloses a controller.

REQUEST FOR ADMISSION 886:

Admit that Torre Provisional discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 887:

Admit that Torre Provisional discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 888:

Admit that Torre Provisional discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 889:

Admit that Torre Provisional discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 890:

Admit that Torre Provisional discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 891:

Admit that Torre Provisional discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 892:

Admit that Torre Provisional discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 893:

Admit that Torre Provisional discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 894:

Admit that Torre Provisional discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 895:

Admit that Torre Provisional discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 896:

Admit that Torre Provisional discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 897:

Admit that Torre Provisional discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 898:

Admit that Torre Provisional discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 899:

Admit that Torre Provisional discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 900:

Admit that Torre Provisional discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 901:

Admit that Torre Provisional discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 902:

Admit that Torre Provisional discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 903:

Admit that Torre Provisional discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 904:

Admit that Yuen I is prior art to the '359 patent.

REQUEST FOR ADMISSION 905:

Admit that Yuen I discloses a wearable device.

REQUEST FOR ADMISSION 906:

Admit that Yuen I discloses a motion sensor.

REQUEST FOR ADMISSION 907:

Admit that Yuen I discloses a biological sensor.

REQUEST FOR ADMISSION 908:

Admit that Yuen I discloses a controller.

REQUEST FOR ADMISSION 909:

Admit that Yuen I discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 910:

Admit that Yuen I discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 911:

Admit that Yuen I discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 912:

Admit that Yuen I discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 913:

Admit that Yuen I discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 914:

Admit that Yuen I discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 915:

Admit that Yuen I discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 916:

Admit that Yuen I discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 917:

Admit that Yuen I discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 918:

Admit that Yuen I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 919:

Admit that Yuen I discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 920:

Admit that Yuen I discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 921:

Admit that Yuen I discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 922:

Admit that Yuen I discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 923:

Admit that Yuen I discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 924:

Admit that Yuen I discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 925:

Admit that Yuen I discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 926:

Admit that Yuen I discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 927:

Admit that Picard is prior art to the '359 patent.

REQUEST FOR ADMISSION 928:

Admit that Picard discloses a wearable device.

REQUEST FOR ADMISSION 929:

Admit that Picard discloses a motion sensor.

REQUEST FOR ADMISSION 930:

Admit that Picard discloses a biological sensor.

REQUEST FOR ADMISSION 931:

Admit that Picard discloses a controller.

REQUEST FOR ADMISSION 932:

Admit that Picard discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 933:

Admit that Picard discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 934:

Admit that Picard discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 935:

Admit that Picard discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 936:

Admit that Picard discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 937:

Admit that Picard discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 938:

Admit that Picard discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 939:

Admit that Picard discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 940:

Admit that Picard discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 941:

Admit that Picard discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 942:

Admit that Picard discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 943:

Admit that Picard discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 944:

Admit that Picard discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 945:

Admit that Picard discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 946:

Admit that Picard discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 947:

Admit that Picard discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 948:

Admit that Picard discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 949:

Admit that Picard discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 950:

Admit that Suzuki II is prior art to the '359 patent.

REQUEST FOR ADMISSION 951:

Admit that Suzuki II discloses a wearable device.

REQUEST FOR ADMISSION 952:

Admit that Suzuki II discloses a motion sensor.

REQUEST FOR ADMISSION 953:

Admit that Suzuki II discloses a biological sensor.

REQUEST FOR ADMISSION 954:

Admit that Suzuki II discloses a controller.

REQUEST FOR ADMISSION 955:

Admit that Suzuki II discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 956:

Admit that Suzuki II discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 957:

Admit that Suzuki II discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 958:

Admit that Suzuki II discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 959:

Admit that Suzuki II discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 960:

Admit that Suzuki II discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 961:

Admit that Suzuki II discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 962:

Admit that Suzuki II discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 963:

Admit that Suzuki II discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 964:

Admit that Suzuki II discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 965:

Admit that Suzuki II discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 966:

Admit that Suzuki II discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 967:

Admit that Suzuki II discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 968:

Admit that Suzuki II discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 969:

Admit that Suzuki II discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 970:

Admit that Suzuki II discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 971:

Admit that Suzuki II discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 972:

Admit that Suzuki II discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 973:

Admit that Dixon discloses a wearable device.

REQUEST FOR ADMISSION 974:

Admit that Dixon discloses a motion sensor.

REQUEST FOR ADMISSION 975:

Admit that Dixon discloses a biological sensor.

REQUEST FOR ADMISSION 976:

Admit that Dixon discloses a controller.

REQUEST FOR ADMISSION 977:

Admit that Dixon discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 978:

Admit that Dixon discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 979:

Admit that Dixon discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 980:

Admit that Dixon discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 981:

Admit that Dixon discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 982:

Admit that Dixon discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 983:

Admit that Dixon discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 984:

Admit that Dixon discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 985:

Admit that Dixon discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 986:

Admit that Dixon discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 987:

Admit that Dixon discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 988:

Admit that Dixon discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 989:

Admit that Dixon discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 990:

Admit that Dixon discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 991:

Admit that Dixon discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 992:

Admit that Dixon discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 993:

Admit that Dixon discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 994:

Admit that Dixon discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 995:

Admit that the Basis B1 Band discloses a wearable device.

REQUEST FOR ADMISSION 996:

Admit that the Basis B1 Band discloses a motion sensor.

REQUEST FOR ADMISSION 997:

Admit that the Basis B1 Band discloses a biological sensor.

REQUEST FOR ADMISSION 998:

Admit that the Basis B1 Band discloses a controller.

REQUEST FOR ADMISSION 999:

Admit that the Basis B1 Band discloses obtaining a movement signal of an object using a motion sensor.

REQUEST FOR ADMISSION 1000:

Admit that the Basis B1 Band discloses obtaining a biological signal of the object using a biological sensor.

REQUEST FOR ADMISSION 1001:

Admit that the Basis B1 Band discloses a controller configured to determine, based on an analysis of the movement signal, whether to perform a specified function of the wearable device using the biological signal.

REQUEST FOR ADMISSION 1002:

Admit that the Basis B1 Band discloses performing the specified function using a select portion of the biological signal obtained during a select period, of the movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 1003:

Admit that the Basis B1 Band discloses the specified condition comprising the movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 1004:

Admit that the Basis B1 Band discloses a controller configured to determine the biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 1005:

Admit that the Basis B1 Band discloses obtaining a movement signal of an object external to the wearable device using the motion sensor.

REQUEST FOR ADMISSION 1006:

Admit that the Basis B1 Band discloses identifying a period, of the movement signal, the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 1007:

Admit that the Basis B1 Band discloses performing a specified function using a select portion of the biological signal corresponding to the period.

REQUEST FOR ADMISSION 1008:

Admit that the Basis B1 Band discloses a biological sensor comprising an optical sensor configured to obtain an optical signal corresponding to the biological signal.

REQUEST FOR ADMISSION 1009:

Admit that the Basis B1 Band discloses determining the biological signal to be a valid signal in response to a magnitude of the biological signal being determined to be within a first specified range.

REQUEST FOR ADMISSION 1010:

Admit that the Basis B1 Band discloses determining the biological signal to be an invalid signal in response to the magnitude of the biological signal being determined to be within a second specified range.

REQUEST FOR ADMISSION 1011:

Admit that the Basis B1 Band discloses determining a select period, of the movement signal, that meets a specified condition.

REQUEST FOR ADMISSION 1012:

Admit that the Basis B1 Band discloses determining, as a valid signal, at least a portion of the biometric signal that is determined to correspond to the determined select period.

REQUEST FOR ADMISSION 1013:

Admit that the Basis B1 Band discloses performing a specified function using the valid signal.

REQUEST FOR ADMISSION 1014:

Admit that the Basis B1 Band discloses a biological sensor comprising an optical sensor configured to obtain an optical signal as the biological signal.

REQUEST FOR ADMISSION 1015:

Admit that the Basis B1 Band discloses a controller configured to validate the biological signal.

REQUEST FOR ADMISSION 1016:

Admit that the Basis B1 Band discloses performing the specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 1017:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of wearable devices comprising a motion sensor and a biological sensor.

REQUEST FOR ADMISSION 1018:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of using a motion sensor to obtain a movement signal of an object.

REQUEST FOR ADMISSION 1019:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of using a biological sensor to obtain a biological signal of an object.

REQUEST FOR ADMISSION 1020:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of using movement signals to determine validity of biological signals in wearable devices.

REQUEST FOR ADMISSION 1021:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of determining whether to perform a specified function of a wearable device using a biological signal based on an analysis of a movement signal.

REQUEST FOR ADMISSION 1022:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of performing a specified function using a select portion of a biological signal obtained during a select period, of a movement signal, determined to correspond to a specified condition.

REQUEST FOR ADMISSION 1023:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of a specified condition comprising a movement signal being determined to be less than or equal to a first threshold value.

REQUEST FOR ADMISSION 1024:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of determining a biological signal to be invalid, irrespective of the movement signal, in response to the magnitude of the biological signal not satisfying a second threshold value.

REQUEST FOR ADMISSION 1025:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of wearable devices configured to obtain a movement signal of an object external to the wearable device using a motion sensor.

REQUEST FOR ADMISSION 1026:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of identifying a period of a movement signal during which the movement signal is determined to be less than a specified condition.

REQUEST FOR ADMISSION 1027:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of biological sensors comprising an optical sensor configured to obtain an optical signal corresponding to or as the biological signal.

REQUEST FOR ADMISSION 1028:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of determining a biological signal to be a valid signal in response to a magnitude of the biological signal being within a first specified range.

REQUEST FOR ADMISSION 1029:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of determining a biological signal to be an invalid signal in response to the magnitude of the biological signal being within a second specified range.

REQUEST FOR ADMISSION 1030:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of determining a select period, of a movement signal, that meets a specified condition, and determining, as a valid signal, at least a portion of a biometric signal that corresponds to the determined select period.

REQUEST FOR ADMISSION 1031:

Admit that the person having ordinary skill in the art before August 20, 2013, knew of validating a biological signal and performing a specified function using a portion of the validated biological signal.

REQUEST FOR ADMISSION 1032:

Admit that Hong is prior art to the '675 patent.

REQUEST FOR ADMISSION 1033:

Admit that Hong discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1034:

Admit that Hong discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1035:

Admit that Hong discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1036:

Admit that Hong discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1037:

Admit that Hong discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1038:

Admit that Hong discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1039:

Admit that Hong discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1040:

Admit that Hong discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1041:

Admit that Hong discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1042:

Admit that Hong discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1043:

Admit that Hong discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1044:

Admit that Hong discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1045:

Admit that Hong discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1046:

Admit that Hong discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1047:

Admit that Hong discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1048:

Admit that Hong discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1049:

Admit that Hong discloses an electronic device.

REQUEST FOR ADMISSION 1050:

Admit that Hong discloses at least one first sensor.

REQUEST FOR ADMISSION 1051:

Admit that Hong discloses at least one second sensor.

REQUEST FOR ADMISSION 1052:

Admit that Hong discloses a memory.

REQUEST FOR ADMISSION 1053:

Admit that Hong discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1054:

Admit that Hong discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1055:

Admit that Hong discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1056:

Admit that Hong discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1057:

Admit that Hong discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1058:

Admit that Hong discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1059:

Admit that Hong discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1060:

Admit that Hong is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1061:

Admit that Hong discloses a wearable electronic device.

REQUEST FOR ADMISSION 1062:

Admit that Hong discloses a motion sensor.

REQUEST FOR ADMISSION 1063:

Admit that Hong discloses one or more optical sensors.

REQUEST FOR ADMISSION 1064:

Admit that Hong discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1065:

Admit that Hong discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1066:

Admit that Hong discloses at least one processor.

REQUEST FOR ADMISSION 1067:

Admit that Hong discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1068:

Admit that Hong discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1069:

Admit that Hong discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1070:

Admit that Hong discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1071:

Admit that Hong discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1072:

Admit that Hong discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1073:

Admit that Hong discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1074:

Admit that Hong discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1075:

Admit that Hong discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1076:

Admit that Hong discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1077:

Admit that Hong discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1078:

Admit that Hong discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1079:

Admit that Hong discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1080:

Admit that Hong discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1081:

Admit that Hong discloses a second sensor.

REQUEST FOR ADMISSION 1082:

Admit that Hong discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1083:

Admit that Hong discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1084:

Admit that Hong discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1085:

Admit that Hong discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1086:

Admit that Hong discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1087:

Admit that Hong discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1088:

Admit that Hong discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1089:

Admit that Hong discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1090:

Admit that Hong discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1091:

Admit that Hong discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1092:

Admit that Hong discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1093:

Admit that Hong discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1094:

Admit that Hong discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1095:

Admit that Hong discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1096:

Admit that Hong discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1097:

Admit that Hong discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1098:

Admit that Hong discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1099:

Admit that Hong discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1100:

Admit that Hong discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1101:

Admit that Hong discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1102:

Admit that Ahmed II is prior art to the '675 patent.

REQUEST FOR ADMISSION 1103:

Admit that Ahmed II discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1104:

Admit that Ahmed II discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1105:

Admit that Ahmed II discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1106:

Admit that Ahmed II discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1107:

Admit that Ahmed II discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1108:

Admit that Ahmed II discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1109:

Admit that Ahmed II discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1110:

Admit that Ahmed II discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1111:

Admit that Ahmed II discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1112:

Admit that Ahmed II discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1113:

Admit that Ahmed II discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1114:

Admit that Ahmed II discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1115:

Admit that Ahmed II discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1116:

Admit that Ahmed II discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1117:

Admit that Ahmed II discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1118:

Admit that Ahmed II discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1119:

Admit that Ahmed II discloses an electronic device.

REQUEST FOR ADMISSION 1120:

Admit that Ahmed II discloses at least one first sensor.

REQUEST FOR ADMISSION 1121:

Admit that Ahmed II discloses at least one second sensor.

REQUEST FOR ADMISSION 1122:

Admit that Ahmed II discloses a memory.

REQUEST FOR ADMISSION 1123:

Admit that Ahmed II discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1124:

Admit that Ahmed II discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1125:

Admit that Ahmed II discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1126:

Admit that Ahmed II discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1127:

Admit that Ahmed II discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1128:

Admit that Ahmed II discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1129:

Admit that Ahmed II discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1130:

Admit that Kimball is prior art to the '675 patent.

REQUEST FOR ADMISSION 1131:

Admit that Kimball discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1132:

Admit that Kimball discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1133:

Admit that Kimball discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1134:

Admit that Kimball discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1135:

Admit that Kimball discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1136:

Admit that Kimball discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1137:

Admit that Kimball discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1138:

Admit that Kimball discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1139:

Admit that Kimball discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1140:

Admit that Kimball discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1141:

Admit that Kimball discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1142:

Admit that Kimball discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1143:

Admit that Kimball discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1144:

Admit that Kimball discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1145:

Admit that Kimball discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1146:

Admit that Kimball discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1147:

Admit that Kimball discloses an electronic device.

REQUEST FOR ADMISSION 1148:

Admit that Kimball discloses at least one first sensor.

REQUEST FOR ADMISSION 1149:

Admit that Kimball discloses at least one second sensor.

REQUEST FOR ADMISSION 1150:

Admit that Kimball discloses a memory.

REQUEST FOR ADMISSION 1151:

Admit that Kimball discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1152:

Admit that Kimball discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1153:

Admit that Kimball discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1154:

Admit that Kimball discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1155:

Admit that Kimball discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1156:

Admit that Kimball discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1157:

Admit that Kimball discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1158:

Admit that Nishimiya is prior art to the '675 patent.

REQUEST FOR ADMISSION 1159:

Admit that Nishimiya discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1160:

Admit that Nishimiya discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1161:

Admit that Nishimiya discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1162:

Admit that Nishimiya discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1163:

Admit that Nishimiya discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1164:

Admit that Nishimiya discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1165:

Admit that Nishimiya discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1166:

Admit that Nishimiya discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1167:

Admit that Nishimiya discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1168:

Admit that Nishimiya discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1169:

Admit that Nishimiya discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1170:

Admit that Nishimiya discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1171:

Admit that Nishimiya discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1172:

Admit that Nishimiya discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1173:

Admit that Nishimiya discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1174:

Admit that Nishimiya discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1175:

Admit that Nishimiya discloses an electronic device.

REQUEST FOR ADMISSION 1176:

Admit that Nishimiya discloses at least one first sensor.

REQUEST FOR ADMISSION 1177:

Admit that Nishimiya discloses at least one second sensor.

REQUEST FOR ADMISSION 1178:

Admit that Nishimiya discloses a memory.

REQUEST FOR ADMISSION 1179:

Admit that Nishimiya discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1180:

Admit that Nishimiya discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1181:

Admit that Nishimiya discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1182:

Admit that Nishimiya discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1183:

Admit that Nishimiya discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1184:

Admit that Nishimiya discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1185:

Admit that Nishimiya discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1186:

Admit that Arnold is prior art to the '675 patent.

REQUEST FOR ADMISSION 1187:

Admit that Arnold discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1188:

Admit that Arnold discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1189:

Admit that Arnold discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1190:

Admit that Arnold discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1191:

Admit that Arnold discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1192:

Admit that Arnold discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1193:

Admit that Arnold discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1194:

Admit that Arnold discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1195:

Admit that Arnold discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1196:

Admit that Arnold discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1197:

Admit that Arnold discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1198:

Admit that Arnold discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1199:

Admit that Arnold discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1200:

Admit that Arnold discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1201:

Admit that Arnold discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1202:

Admit that Arnold discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1203:

Admit that Arnold discloses an electronic device.

REQUEST FOR ADMISSION 1204:

Admit that Arnold discloses at least one first sensor.

REQUEST FOR ADMISSION 1205:

Admit that Arnold discloses at least one second sensor.

REQUEST FOR ADMISSION 1206:

Admit that Arnold discloses a memory.

REQUEST FOR ADMISSION 1207:

Admit that Arnold discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1208:

Admit that Arnold discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1209:

Admit that Arnold discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1210:

Admit that Arnold discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1211:

Admit that Arnold discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1212:

Admit that Arnold discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1213:

Admit that Arnold discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1214:

Admit that Utter is prior art to the '675 patent.

REQUEST FOR ADMISSION 1215:

Admit that Utter discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1216:

Admit that Utter discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1217:

Admit that Utter discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1218:

Admit that Utter discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1219:

Admit that Utter discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1220:

Admit that Utter discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1221:

Admit that Utter discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1222:

Admit that Utter discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1223:

Admit that Utter discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1224:

Admit that Utter discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1225:

Admit that Utter discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1226:

Admit that Utter discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1227:

Admit that Utter discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1228:

Admit that Utter discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1229:

Admit that Utter discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1230:

Admit that Utter discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1231:

Admit that Utter discloses an electronic device.

REQUEST FOR ADMISSION 1232:

Admit that Utter discloses at least one first sensor.

REQUEST FOR ADMISSION 1233:

Admit that Utter discloses at least one second sensor.

REQUEST FOR ADMISSION 1234:

Admit that Utter discloses a memory.

REQUEST FOR ADMISSION 1235:

Admit that Utter discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1236:

Admit that Utter discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1237:

Admit that Utter discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1238:

Admit that Utter discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1239:

Admit that Utter discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1240:

Admit that Utter discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1241:

Admit that Utter discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1242:

Admit that Doniwa is prior art to the '675 patent.

REQUEST FOR ADMISSION 1243:

Admit that Doniwa discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1244:

Admit that Doniwa discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1245:

Admit that Doniwa discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1246:

Admit that Doniwa discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1247:

Admit that Doniwa discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1248:

Admit that Doniwa discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1249:

Admit that Doniwa discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1250:

Admit that Doniwa discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1251:

Admit that Doniwa discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1252:

Admit that Doniwa discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1253:

Admit that Doniwa discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1254:

Admit that Doniwa discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1255:

Admit that Doniwa discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1256:

Admit that Doniwa discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1257:

Admit that Doniwa discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1258:

Admit that Doniwa discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1259:

Admit that Doniwa discloses an electronic device.

REQUEST FOR ADMISSION 1260:

Admit that Doniwa discloses at least one first sensor.

REQUEST FOR ADMISSION 1261:

Admit that Doniwa discloses at least one second sensor.

REQUEST FOR ADMISSION 1262:

Admit that Doniwa discloses a memory.

REQUEST FOR ADMISSION 1263:

Admit that Doniwa discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1264:

Admit that Doniwa discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1265:

Admit that Doniwa discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1266:

Admit that Doniwa discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1267:

Admit that Doniwa discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1268:

Admit that Doniwa discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1269:

Admit that Doniwa discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1270:

Admit that Kamitaki is prior art to the '675 patent.

REQUEST FOR ADMISSION 1271:

Admit that Kamitaki discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1272:

Admit that Kamitaki discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1273:

Admit that Kamitaki discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1274:

Admit that Kamitaki discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1275:

Admit that Kamitaki discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1276:

Admit that Kamitaki discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1277:

Admit that Kamitaki discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1278:

Admit that Kamitaki discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1279:

Admit that Kamitaki discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1280:

Admit that Kamitaki discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1281:

Admit that Kamitaki discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1282:

Admit that Kamitaki discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1283:

Admit that Kamitaki discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1284:

Admit that Kamitaki discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1285:

Admit that Kamitaki discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1286:

Admit that Kamitaki discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1287:

Admit that Kamitaki discloses an electronic device.

REQUEST FOR ADMISSION 1288:

Admit that Kamitaki discloses at least one first sensor.

REQUEST FOR ADMISSION 1289:

Admit that Kamitaki discloses at least one second sensor.

REQUEST FOR ADMISSION 1290:

Admit that Kamitaki discloses a memory.

REQUEST FOR ADMISSION 1291:

Admit that Kamitaki discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1292:

Admit that Kamitaki discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1293:

Admit that Kamitaki discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1294:

Admit that Kamitaki discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1295:

Admit that Kamitaki discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1296:

Admit that Kamitaki discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1297:

Admit that Kamitaki discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1298:

Admit that Schenk is prior art to the '675 patent.

REQUEST FOR ADMISSION 1299:

Admit that Schenk discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1300:

Admit that Schenk discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1301:

Admit that Schenk discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1302:

Admit that Schenk discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1303:

Admit that Schenk discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1304:

Admit that Schenk discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1305:

Admit that Schenk discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1306:

Admit that Schenk discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1307:

Admit that Schenk discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1308:

Admit that Schenk discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1309:

Admit that Schenk discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1310:

Admit that Schenk discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1311:

Admit that Schenk discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1312:

Admit that Schenk discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1313:

Admit that Schenk discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1314:

Admit that Schenk discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1315:

Admit that Schenk discloses an electronic device.

REQUEST FOR ADMISSION 1316:

Admit that Schenk discloses at least one first sensor.

REQUEST FOR ADMISSION 1317:

Admit that Schenk discloses at least one second sensor.

REQUEST FOR ADMISSION 1318:

Admit that Schenk discloses a memory.

REQUEST FOR ADMISSION 1319:

Admit that Schenk discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1320:

Admit that Schenk discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1321:

Admit that Schenk discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1322:

Admit that Schenk discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1323:

Admit that Schenk discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1324:

Admit that Schenk discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1325:

Admit that Schenk discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1326:

Yuen II is prior art to the '675 patent.

REQUEST FOR ADMISSION 1327:

Admit that Yuen II discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1328:

Admit that Yuen II discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1329:

Admit that Yuen II discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1330:

Admit that Yuen II discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1331:

Admit that Yuen II discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1332:

Admit that Yuen II discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1333:

Admit that Yuen II discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1334:

Admit that Yuen II discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1335:

Admit that Yuen II discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1336:

Admit that Yuen II discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1337:

Admit that Yuen II discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1338:

Admit that Yuen II discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1339:

Admit that Yuen II discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1340:

Admit that Yuen II discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1341:

Admit that Yuen II discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1342:

Admit that Yuen II discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1343:

Admit that Yuen II discloses an electronic device.

REQUEST FOR ADMISSION 1344:

Admit that Yuen II discloses at least one first sensor.

REQUEST FOR ADMISSION 1345:

Admit that Yuen II discloses at least one second sensor.

REQUEST FOR ADMISSION 1346:

Admit that Yuen II discloses a memory.

REQUEST FOR ADMISSION 1347:

Admit that Yuen II discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1348:

Admit that Yuen II discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1349:

Admit that Yuen II discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1350:

Admit that Yuen II discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1351:

Admit that Yuen II discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1352:

Admit that Yuen II discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1353:

Admit that Yuen II discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

Admit that the Basis B1 Band is prior art to the '675 patent.

REQUEST FOR ADMISSION 1354:

Admit that the Basis B1 Band discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1355:

Admit that the Basis B1 Band discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1356:

Admit that the Basis B1 Band discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1357:

Admit that the Basis B1 Band discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1358:

Admit that the Basis B1 Band discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1359:

Admit that the Basis B1 Band discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1360:

Admit that the Basis B1 Band discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1361:

Admit that the Basis B1 Band discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1362:

Admit that the Basis B1 Band discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1363:

Admit that the Basis B1 Band discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1364:

Admit that the Basis B1 Band discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1365:

Admit that the Basis B1 Band discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1366:

Admit that the Basis B1 Band discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1367:

Admit that the Basis B1 Band discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1368:

Admit that the Basis B1 Band discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1369:

Admit that the Basis B1 Band discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1370:

Admit that the Basis B1 Band discloses an electronic device.

REQUEST FOR ADMISSION 1371:

Admit that the Basis B1 Band discloses at least one first sensor.

REQUEST FOR ADMISSION 1372:

Admit that the Basis B1 Band discloses at least one second sensor.

REQUEST FOR ADMISSION 1373:

Admit that the Basis B1 Band discloses a memory.

REQUEST FOR ADMISSION 1374:

Admit that the Basis B1 Band discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1375:

Admit that the Basis B1 Band discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1376:

Admit that the Basis B1 Band discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1377:

Admit that the Basis B1 Band discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1378:

Admit that the Basis B1 Band discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1379:

Admit that the Basis B1 Band discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1380:

Admit that the Basis B1 Band discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1381:

Admit that the Oura Ring 1 was described in a printed publication before June 13, 2016.

REQUEST FOR ADMISSION 1382:

Admit that the Oura Ring 1 was in public use before June 13, 2016.

REQUEST FOR ADMISSION 1383:

Admit that the Oura Ring 1 was on sale before June 13, 2016.

REQUEST FOR ADMISSION 1384:

Admit that the Oura Ring 1 was available to the public before June 13, 2016.

REQUEST FOR ADMISSION 1385:

Admit that the Oura Ring 1 is prior art to the '789 patent.

REQUEST FOR ADMISSION 1386:

Admit that the Oura Ring 1 discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1387:

Admit that the Oura Ring 1 discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1388:

Admit that the Oura Ring 1 discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1389:

Admit that the Oura Ring 1 discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1390:

Admit that the Oura Ring 1 discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1391:

Admit that the Oura Ring 1 discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1392:

Admit that the Oura Ring 1 discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1393:

Admit that the Oura Ring 1 discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1394:

Admit that the Oura Ring 1 discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1395:

Admit that the Oura Ring 1 discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1396:

Admit that the Oura Ring 1 discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1397:

Admit that the Oura Ring 1 discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1398:

Admit that the Oura Ring 1 discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1399:

Admit that the Oura Ring 1 discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1400:

Admit that the Oura Ring 1 discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1401:

Admit that the Oura Ring 1 discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1402:

Admit that the Oura Ring 1 discloses an electronic device.

REQUEST FOR ADMISSION 1403:

Admit that the Oura Ring 1 discloses at least one first sensor.

REQUEST FOR ADMISSION 1404:

Admit that the Oura Ring 1 discloses at least one second sensor.

REQUEST FOR ADMISSION 1405:

Admit that the Oura Ring 1 discloses a memory.

REQUEST FOR ADMISSION 1406:

Admit that the Oura Ring 1 discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1407:

Admit that the Oura Ring 1 discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1408:

Admit that the Oura Ring 1 discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1409:

Admit that the Oura Ring 1 discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1410:

Admit that the Oura Ring 1 discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1411:

Admit that the Oura Ring 1 discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1412:

Admit that the Oura Ring 1 discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1413:

Admit that Microsoft Band discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1414:

Admit that Microsoft Band discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1415:

Admit that Microsoft Band discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1416:

Admit that Microsoft Band discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1417:

Admit that Microsoft Band discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1418:

Admit that Microsoft Band discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1419:

Admit that Microsoft Band discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1420:

Admit that Microsoft Band discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1421:

Admit that Microsoft Band discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1422:

Admit that Microsoft Band discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1423:

Admit that Microsoft Band discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1424:

Admit that Microsoft Band discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1425:

Admit that Microsoft Band discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1426:

Admit that Microsoft Band discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1427:

Admit that Microsoft Band discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1428:

Admit that Microsoft Band discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1429:

Admit that Microsoft Band discloses an electronic device.

REQUEST FOR ADMISSION 1430:

Admit that Microsoft Band discloses at least one first sensor.

REQUEST FOR ADMISSION 1431:

Admit that Microsoft Band discloses at least one second sensor.

REQUEST FOR ADMISSION 1432:

Admit that Microsoft Band discloses a memory.

REQUEST FOR ADMISSION 1433:

Admit that Microsoft Band discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1434:

Admit that Microsoft Band discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1435:

Admit that Microsoft Band discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1436:

Admit that Microsoft Band discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1437:

Admit that Microsoft Band discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1438:

Admit that Microsoft Band discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1439:

Admit that Microsoft Band discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1440:

Admit that Apple Watch Series Zero discloses determining whether an electronic device is worn on a part of a user's body using at least one first sensor of the electronic device.

REQUEST FOR ADMISSION 1441:

Admit that Apple Watch Series Zero discloses acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user's body.

REQUEST FOR ADMISSION 1442:

Admit that Apple Watch Series Zero discloses activating at least one second sensor based on at least a part of the first information on the motion of the electronic device.

REQUEST FOR ADMISSION 1443:

Admit that Apple Watch Series Zero discloses detecting a biometric information of the user using the activated at least one second sensor.

REQUEST FOR ADMISSION 1444:

Admit that Apple Watch Series Zero discloses, during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor.

REQUEST FOR ADMISSION 1445:

Admit that Apple Watch Series Zero discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1446:

Admit that Apple Watch Series Zero discloses the at least one first sensor comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1447:

Admit that Apple Watch Series Zero discloses acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes.

REQUEST FOR ADMISSION 1448:

Admit that Apple Watch Series Zero discloses activating the at least one second sensor based on at least a part of the additional information on the motion.

REQUEST FOR ADMISSION 1449:

Admit that Apple Watch Series Zero discloses at least one of the second period of time or the third period of time comprising a time point when the first period of time passes.

REQUEST FOR ADMISSION 1450:

Admit that Apple Watch Series Zero discloses accumulating a number of failures when the detection of the biometric information fails.

REQUEST FOR ADMISSION 1451:

Admit that Apple Watch Series Zero discloses deactivating the at least one second sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1452:

Admit that Apple Watch Series Zero discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1453:

Admit that Apple Watch Series Zero discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data about a physical characteristic or state of the user.

REQUEST FOR ADMISSION 1454:

Admit that Apple Watch Series Zero discloses the detection of the biometric information of the user using the activated at least one second sensor comprising acquiring data from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1455:

Admit that Apple Watch Series Zero discloses changing at least one condition for activating the at least one second sensor based on at least a part of the data acquired from at least one of the at least one first sensor and the at least one second sensor.

REQUEST FOR ADMISSION 1456:

Admit that Apple Watch Series Zero discloses an electronic device.

REQUEST FOR ADMISSION 1457:

Admit that Apple Watch Series Zero discloses at least one first sensor.

REQUEST FOR ADMISSION 1458:

Admit that Apple Watch Series Zero discloses at least one second sensor.

REQUEST FOR ADMISSION 1459:

Admit that Apple Watch Series Zero discloses a memory.

REQUEST FOR ADMISSION 1460:

Admit that Apple Watch Series Zero discloses at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory.

REQUEST FOR ADMISSION 1461:

Admit that Apple Watch Series Zero discloses determining whether the electronic device is worn on a part of a user's body.

REQUEST FOR ADMISSION 1462:

Admit that Apple Watch Series Zero discloses, when the electronic device is worn on the part of the user's body, determining a motion of the electronic device based on first information obtained by the at least one first sensor.

REQUEST FOR ADMISSION 1463:

Admit that Apple Watch Series Zero discloses determining whether to identify biometric information based on the motion of the electronic device.

REQUEST FOR ADMISSION 1464:

Admit that Apple Watch Series Zero discloses, in response to determining to identify biometric information, identifying the biometric information of the user through the at least one second sensor.

REQUEST FOR ADMISSION 1465:

Admit that Apple Watch Series Zero discloses, during identifying the biometric information of the user, obtaining second information on a motion of the electronic device using the at least one first sensor.

REQUEST FOR ADMISSION 1466:

Admit that Apple Watch Series Zero discloses, in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.

REQUEST FOR ADMISSION 1467:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of electronic devices comprising at least one first sensor, at least one second sensor, a memory, and at least one processor.

REQUEST FOR ADMISSION 1468:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of determining whether an electronic device is worn on a part of a user's body using a first sensor.

REQUEST FOR ADMISSION 1469:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of acquiring information on a motion of an electronic device using a first sensor for a period of time shortly before and/or immediately after a first period of time when the electronic device is determined to be worn on a user's body.

REQUEST FOR ADMISSION 1470:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of activating a second sensor based on motion information acquired by a first sensor.

REQUEST FOR ADMISSION 1471:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of detecting biometric information of a user using an activated second sensor.

REQUEST FOR ADMISSION 1472:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of acquiring information on a motion of an electronic device during detection of biometric information.

REQUEST FOR ADMISSION 1473:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of inactivating a sensor in response to identifying that motion of an electronic device is more than a threshold motion.

REQUEST FOR ADMISSION 1474:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of first sensors comprising at least one of a proximity sensor, a gyro sensor, a terrestrial magnetism sensor, or an acceleration sensor.

REQUEST FOR ADMISSION 1475:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of acquiring additional motion information for a third period of time immediately after a second period of time passes, and activating a second sensor based on the additional information.

REQUEST FOR ADMISSION 1476:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of accumulating a number of failures when detection of biometric information fails and deactivating a sensor when a cumulative number of failures satisfies a selected condition.

REQUEST FOR ADMISSION 1477:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of changing a condition for activating a sensor based on acquired data.

REQUEST FOR ADMISSION 1478:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of determining whether to identify biometric information based on a motion of an electronic device.

REQUEST FOR ADMISSION 1479:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of wearable electronic devices comprising a motion sensor and one or more optical sensors including a light emitting unit and a light receiving unit.

REQUEST FOR ADMISSION 1480:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of obtaining a first motion signal corresponding to a wearable electronic device using a motion sensor, prior to a biological signal being obtained using one or more optical sensors.

REQUEST FOR ADMISSION 1481:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of emitting light using a light emitting unit based at least in part on a determination that a motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1482:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of obtaining a biological signal corresponding to a user using a light receiving unit based at least in part on reflected light.

REQUEST FOR ADMISSION 1483:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of obtaining a second motion signal during the obtaining of a biological signal.

REQUEST FOR ADMISSION 1484:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of refraining from emitting light based at least in part on a determination that a motion signal does not satisfy a specified condition.

REQUEST FOR ADMISSION 1485:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of determining whether a wearable electronic device is attached to a user using one or more optical sensors.

REQUEST FOR ADMISSION 1486:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of performing the emitting of light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1487:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of adjusting a specified time period based at least in part on context information corresponding to a biological signal.

REQUEST FOR ADMISSION 1488:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of generating heart rate information corresponding to a user using a biological signal.

REQUEST FOR ADMISSION 1489:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of presenting a notification corresponding to heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1490:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of activating a second sensor based at least in part on movement of a wearable electronic device.

REQUEST FOR ADMISSION 1491:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of refraining from obtaining biological signal information using an activated second sensor based at least in part on a determination that motion information satisfies a specified range.

REQUEST FOR ADMISSION 1492:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of controlling a sensor to inactivate at least a portion thereof.

REQUEST FOR ADMISSION 1493:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of controlling a sensor to activate at least a portion thereof based at least in part on a determination that motion information satisfies another specified range lower than a specified range.

REQUEST FOR ADMISSION 1494:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of adjusting a specified time period for sensor activation based at least in part on context information generated using motion information and biological signal information.

REQUEST FOR ADMISSION 1495:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of activating a second sensor prior to obtaining biological signal information, in response to movement of a wearable electronic device.

REQUEST FOR ADMISSION 1496:

Admit that the person having ordinary skill in the art before August 12, 2015, knew of a second sensor including a light emitting unit for emitting light as part of obtaining biological signal information and stopping the emitting of light as part of refraining from obtaining the biological signal information.

REQUEST FOR ADMISSION 1497:

Admit that Bologna is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1498:

Admit that Bologna discloses a wearable electronic device.

REQUEST FOR ADMISSION 1499:

Admit that Bologna discloses a motion sensor.

REQUEST FOR ADMISSION 1500:

Admit that Bologna discloses one or more optical sensors.

REQUEST FOR ADMISSION 1501:

Admit that Bologna discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1502:

Admit that Bologna discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1503:

Admit that Bologna discloses at least one processor.

REQUEST FOR ADMISSION 1504:

Admit that Bologna discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1505:

Admit that Bologna discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1506:

Admit that Bologna discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1507:

Admit that Bologna discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1508:

Admit that Bologna discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1509:

Admit that Bologna discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1510:

Admit that Bologna discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1511:

Admit that Bologna discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1512:

Admit that Bologna discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1513:

Admit that Bologna discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1514:

Admit that Bologna discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1515:

Admit that Bologna discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1516:

Admit that Bologna discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1517:

Admit that Bologna discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1518:

Admit that Bologna discloses a second sensor.

REQUEST FOR ADMISSION 1519:

Admit that Bologna discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1520:

Admit that Bologna discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1521:

Admit that Bologna discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1522:

Admit that Bologna discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1523:

Admit that Bologna discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1524:

Admit that Bologna discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1525:

Admit that Bologna discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1526:

Admit that Bologna discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1527:

Admit that Bologna discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1528:

Admit that Bologna discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1529:

Admit that Bologna discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1530:

Admit that Bologna discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1531:

Admit that Bologna discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1532:

Admit that Bologna discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1533:

Admit that Bologna discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1534:

Admit that Bologna discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1535:

Admit that Bologna discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1536:

Admit that Bologna discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1537:

Admit that Bologna discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1538:

Admit that Bologna discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1539:

Admit that Furuta is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1540:

Admit that Furuta discloses a wearable electronic device.

REQUEST FOR ADMISSION 1541:

Admit that Furuta discloses a motion sensor.

REQUEST FOR ADMISSION 1542:

Admit that Furuta discloses one or more optical sensors.

REQUEST FOR ADMISSION 1543:

Admit that Furuta discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1544:

Admit that Furuta discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1545:

Admit that Furuta discloses at least one processor.

REQUEST FOR ADMISSION 1546:

Admit that Furuta discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1547:

Admit that Furuta discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1548:

Admit that Furuta discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1549:

Admit that Furuta discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1550:

Admit that Furuta discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1551:

Admit that Furuta discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1552:

Admit that Furuta discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1553:

Admit that Furuta discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1554:

Admit that Furuta discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1555:

Admit that Furuta discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1556:

Admit that Furuta discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1557:

Admit that Furuta discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1558:

Admit that Furuta discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1559:

Admit that Furuta discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1560:

Admit that Furuta discloses a second sensor.

REQUEST FOR ADMISSION 1561:

Admit that Furuta discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1562:

Admit that Furuta discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1563:

Admit that Furuta discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1564:

Admit that Furuta discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1565:

Admit that Furuta discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1566:

Admit that Furuta discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1567:

Admit that Furuta discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1568:

Admit that Furuta discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1569:

Admit that Furuta discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1570:

Admit that Furuta discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1571:

Admit that Furuta discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1572:

Admit that Furuta discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1573:

Admit that Furuta discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1574:

Admit that Furuta discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1575:

Admit that Furuta discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1576:

Admit that Furuta discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1577:

Admit that Furuta discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1578:

Admit that Furuta discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1579:

Admit that Furuta discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1580:

Admit that Furuta discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1581:

Admit that Lee I is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1582:

Admit that Lee I discloses a wearable electronic device.

REQUEST FOR ADMISSION 1583:

Admit that Lee I discloses a motion sensor.

REQUEST FOR ADMISSION 1584:

Admit that Lee I discloses one or more optical sensors.

REQUEST FOR ADMISSION 1585:

Admit that Lee I discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1586:

Admit that Lee I discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1587:

Admit that Lee I discloses at least one processor.

REQUEST FOR ADMISSION 1588:

Admit that Lee I discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1589:

Admit that Lee I discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1590:

Admit that Lee I discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1591:

Admit that Lee I discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1592:

Admit that Lee I discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1593:

Admit that Lee I discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1594:

Admit that Lee I discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1595:

Admit that Lee I discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1596:

Admit that Lee I discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1597:

Admit that Lee I discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1598:

Admit that Lee I discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1599:

Admit that Lee I discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1600:

Admit that Lee I discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1601:

Admit that Lee I discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1602:

Admit that Lee I discloses a second sensor.

REQUEST FOR ADMISSION 1603:

Admit that Lee I discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1604:

Admit that Lee I discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1605:

Admit that Lee I discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1606:

Admit that Lee I discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1607:

Admit that Lee I discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1608:

Admit that Lee I discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1609:

Admit that Lee I discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1610:

Admit that Lee I discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1611:

Admit that Lee I discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1612:

Admit that Lee I discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1613:

Admit that Lee I discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1614:

Admit that Lee I discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1615:

Admit that Lee I discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1616:

Admit that Lee I discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1617:

Admit that Lee I discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1618:

Admit that Lee I discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1619:

Admit that Lee I discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1620:

Admit that Lee I discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1621:

Admit that Lee I discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1622:

Admit that Lee I discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1623:

Admit that Von Badinski is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1624:

Admit that Von Badinski discloses a wearable electronic device.

REQUEST FOR ADMISSION 1625:

Admit that Von Badinski discloses a motion sensor.

REQUEST FOR ADMISSION 1626:

Admit that Von Badinski discloses one or more optical sensors.

REQUEST FOR ADMISSION 1627:

Admit that Von Badinski discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1628:

Admit that Von Badinski discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1629:

Admit that Von Badinski discloses at least one processor.

REQUEST FOR ADMISSION 1630:

Admit that Von Badinski discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1631:

Admit that Von Badinski discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1632:

Admit that Von Badinski discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1633:

Admit that Von Badinski discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1634:

Admit that Von Badinski discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1635:

Admit that Von Badinski discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1636:

Admit that Von Badinski discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1637:

Admit that Von Badinski discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1638:

Admit that Von Badinski discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1639:

Admit that Von Badinski discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1640:

Admit that Von Badinski discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1641:

Admit that Von Badinski discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1642:

Admit that Von Badinski discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1643:

Admit that Von Badinski discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1644:

Admit that Von Badinski discloses a second sensor.

REQUEST FOR ADMISSION 1645:

Admit that Von Badinski discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1646:

Admit that Von Badinski discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1647:

Admit that Von Badinski discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1648:

Admit that Von Badinski discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1649:

Admit that Von Badinski discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1650:

Admit that Von Badinski discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1651:

Admit that Von Badinski discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1652:

Admit that Von Badinski discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1653:

Admit that Von Badinski discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1654:

Admit that Von Badinski discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1655:

Admit that Von Badinski discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1656:

Admit that Von Badinski discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1657:

Admit that Von Badinski discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1658:

Admit that Von Badinski discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1659:

Admit that Von Badinski discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1660:

Admit that Von Badinski discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1661:

Admit that Von Badinski discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1662:

Admit that Von Badinski discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1663:

Admit that Von Badinski discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1664:

Admit that Von Badinski discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1665:

Admit that Ahmed III is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1666:

Admit that Ahmed III discloses a wearable electronic device.

REQUEST FOR ADMISSION 1667:

Admit that Ahmed III discloses a motion sensor.

REQUEST FOR ADMISSION 1668:

Admit that Ahmed III discloses one or more optical sensors.

REQUEST FOR ADMISSION 1669:

Admit that Ahmed III discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1670:

Admit that Ahmed III discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1671:

Admit that Ahmed III discloses at least one processor.

REQUEST FOR ADMISSION 1672:

Admit that Ahmed III discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1673:

Admit that Ahmed III discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1674:

Admit that Ahmed III discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1675:

Admit that Ahmed III discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1676:

Admit that Ahmed III discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1677:

Admit that Ahmed III discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1678:

Admit that Ahmed III discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1679:

Admit that Ahmed III discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1680:

Admit that Ahmed III discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1681:

Admit that Ahmed III discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1682:

Admit that Ahmed III discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1683:

Admit that Ahmed III discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1684:

Admit that Ahmed III discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1685:

Admit that Ahmed III discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1686:

Admit that Ahmed III discloses a second sensor.

REQUEST FOR ADMISSION 1687:

Admit that Ahmed III discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1688:

Admit that Ahmed III discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1689:

Admit that Ahmed III discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1690:

Admit that Ahmed III discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1691:

Admit that Ahmed III discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1692:

Admit that Ahmed III discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1693:

Admit that Ahmed III discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1694:

Admit that Ahmed III discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1695:

Admit that Ahmed III discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1696:

Admit that Ahmed III discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1697:

Admit that Ahmed III discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1698:

Admit that Ahmed III discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1699:

Admit that Ahmed III discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1700:

Admit that Ahmed III discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1701:

Admit that Ahmed III discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1702:

Admit that Ahmed III discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1703:

Admit that Ahmed III discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1704:

Admit that Ahmed III discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1705:

Admit that Ahmed III discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1706:

Admit that Ahmed III discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1707:

Admit that Patel is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1708:

Admit that Patel discloses a wearable electronic device.

REQUEST FOR ADMISSION 1709:

Admit that Patel discloses a motion sensor.

REQUEST FOR ADMISSION 1710:

Admit that Patel discloses one or more optical sensors.

REQUEST FOR ADMISSION 1711:

Admit that Patel discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1712:

Admit that Patel discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1713:

Admit that Patel discloses at least one processor.

REQUEST FOR ADMISSION 1714:

Admit that Patel discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1715:

Admit that Patel discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1716:

Admit that Patel discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1717:

Admit that Patel discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1718:

Admit that Patel discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1719:

Admit that Patel discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1720:

Admit that Patel discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1721:

Admit that Patel discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1722:

Admit that Patel discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1723:

Admit that Patel discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1724:

Admit that Patel discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1725:

Admit that Patel discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1726:

Admit that Patel discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1727:

Admit that Patel discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1728:

Admit that Patel discloses a second sensor.

REQUEST FOR ADMISSION 1729:

Admit that Patel discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1730:

Admit that Patel discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1731:

Admit that Patel discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1732:

Admit that Patel discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1733:

Admit that Patel discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1734:

Admit that Patel discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1735:

Admit that Patel discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1736:

Admit that Patel discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1737:

Admit that Patel discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1738:

Admit that Patel discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1739:

Admit that Patel discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1740:

Admit that Patel discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1741:

Admit that Patel discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1742:

Admit that Patel discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1743:

Admit that Patel discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1744:

Admit that Patel discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1745:

Admit that Patel discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1746:

Admit that Patel discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1747:

Admit that Patel discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1748:

Admit that Patel discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1749:

Admit that Podhajsky is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1750:

Admit that Podhajsky discloses a wearable electronic device.

REQUEST FOR ADMISSION 1751:

Admit that Podhajsky discloses a motion sensor.

REQUEST FOR ADMISSION 1752:

Admit that Podhajsky discloses one or more optical sensors.

REQUEST FOR ADMISSION 1753:

Admit that Podhajsky discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1754:

Admit that Podhajsky discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1755:

Admit that Podhajsky discloses at least one processor.

REQUEST FOR ADMISSION 1756:

Admit that Podhajsky discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1757:

Admit that Podhajsky discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1758:

Admit that Podhajsky discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1759:

Admit that Podhajsky discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1760:

Admit that Podhajsky discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1761:

Admit that Podhajsky discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1762:

Admit that Podhajsky discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1763:

Admit that Podhajsky discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1764:

Admit that Podhajsky discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1765:

Admit that Podhajsky discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1766:

Admit that Podhajsky discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1767:

Admit that Podhajsky discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1768:

Admit that Podhajsky discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1769:

Admit that Podhajsky discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1770:

Admit that Podhajsky discloses a second sensor.

REQUEST FOR ADMISSION 1771:

Admit that Podhajsky discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1772:

Admit that Podhajsky discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1773:

Admit that Podhajsky discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1774:

Admit that Podhajsky discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1775:

Admit that Podhajsky discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1776:

Admit that Podhajsky discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1777:

Admit that Podhajsky discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1778:

Admit that Podhajsky discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1779:

Admit that Podhajsky discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1780:

Admit that Podhajsky discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1781:

Admit that Podhajsky discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1782:

Admit that Podhajsky discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1783:

Admit that Podhajsky discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1784:

Admit that Podhajsky discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1785:

Admit that Podhajsky discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1786:

Admit that Podhajsky discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1787:

Admit that Podhajsky discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1788:

Admit that Podhajsky discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1789:

Admit that Podhajsky discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1790:

Admit that Podhajsky discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1791:

Admit that Lee II is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1792:

Admit that Lee II discloses a wearable electronic device.

REQUEST FOR ADMISSION 1793:

Admit that Lee II discloses a motion sensor.

REQUEST FOR ADMISSION 1794:

Admit that Lee II discloses one or more optical sensors.

REQUEST FOR ADMISSION 1795:

Admit that Lee II discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1796:

Admit that Lee II discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1797:

Admit that Lee II discloses at least one processor.

REQUEST FOR ADMISSION 1798:

Admit that Lee II discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1799:

Admit that Lee II discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1800:

Admit that Lee II discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1801:

Admit that Lee II discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1802:

Admit that Lee II discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1803:

Admit that Lee II discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1804:

Admit that Lee II discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1805:

Admit that Lee II discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1806:

Admit that Lee II discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1807:

Admit that Lee II discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1808:

Admit that Lee II discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1809:

Admit that Lee II discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1810:

Admit that Lee II discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1811:

Admit that Lee II discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1812:

Admit that Lee II discloses a second sensor.

REQUEST FOR ADMISSION 1813:

Admit that Lee II discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1814:

Admit that Lee II discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1815:

Admit that Lee II discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1816:

Admit that Lee II discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1817:

Admit that Lee II discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1818:

Admit that Lee II discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1819:

Admit that Lee II discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1820:

Admit that Lee II discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1821:

Admit that Lee II discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1822:

Admit that Lee II discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1823:

Admit that Lee II discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1824:

Admit that Lee II discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1825:

Admit that Lee II discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1826:

Admit that Lee II discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1827:

Admit that Lee II discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1828:

Admit that Lee II discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1829:

Admit that Lee II discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1830:

Admit that Lee II discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1831:

Admit that Lee II discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1832:

Admit that Lee II discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1833:

Admit that Presura is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1834:

Admit that Presura discloses a wearable electronic device.

REQUEST FOR ADMISSION 1835:

Admit that Presura discloses a motion sensor.

REQUEST FOR ADMISSION 1836:

Admit that Presura discloses one or more optical sensors.

REQUEST FOR ADMISSION 1837:

Admit that Presura discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1838:

Admit that Presura discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1839:

Admit that Presura discloses at least one processor.

REQUEST FOR ADMISSION 1840:

Admit that Presura discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1841:

Admit that Presura discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1842:

Admit that Presura discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1843:

Admit that Presura discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1844:

Admit that Presura discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1845:

Admit that Presura discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1846:

Admit that Presura discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1847:

Admit that Presura discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1848:

Admit that Presura discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1849:

Admit that Presura discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1850:

Admit that Presura discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1851:

Admit that Presura discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1852:

Admit that Presura discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1853:

Admit that Presura discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1854:

Admit that Presura discloses a second sensor.

REQUEST FOR ADMISSION 1855:

Admit that Presura discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1856:

Admit that Presura discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1857:

Admit that Presura discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1858:

Admit that Presura discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1859:

Admit that Presura discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1860:

Admit that Presura discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1861:

Admit that Presura discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1862:

Admit that Presura discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1863:

Admit that Presura discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1864:

Admit that Presura discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1865:

Admit that Presura discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1866:

Admit that Presura discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1867:

Admit that Presura discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1868:

Admit that Presura discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1869:

Admit that Presura discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1870:

Admit that Presura discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1871:

Admit that Presura discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1872:

Admit that Presura discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1873:

Admit that Presura discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1874:

Admit that Presura discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1875:

Admit that Wei discloses a wearable electronic device.

REQUEST FOR ADMISSION 1876:

Admit that Wei discloses a motion sensor.

REQUEST FOR ADMISSION 1877:

Admit that Wei discloses one or more optical sensors.

REQUEST FOR ADMISSION 1878:

Admit that Wei discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1879:

Admit that Wei discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1880:

Admit that Wei discloses at least one processor.

REQUEST FOR ADMISSION 1881:

Admit that Wei discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1882:

Admit that Wei discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1883:

Admit that Wei discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1884:

Admit that Wei discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1885:

Admit that Wei discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1886:

Admit that Wei discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1887:

Admit that Wei discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1888:

Admit that Wei discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1889:

Admit that Wei discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1890:

Admit that Wei discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1891:

Admit that Wei discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1892:

Admit that Wei discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1893:

Admit that Wei discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1894:

Admit that Wei discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1895:

Admit that Wei discloses a second sensor.

REQUEST FOR ADMISSION 1896:

Admit that Wei discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1897:

Admit that Wei discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1898:

Admit that Wei discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1899:

Admit that Wei discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1900:

Admit that Wei discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1901:

Admit that Wei discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1902:

Admit that Wei discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1903:

Admit that Wei discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1904:

Admit that Wei discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1905:

Admit that Wei discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1906:

Admit that Wei discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1907:

Admit that Wei discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1908:

Admit that Wei discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1909:

Admit that Wei discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1910:

Admit that Wei discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1911:

Admit that Wei discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1912:

Admit that Wei discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1913:

Admit that Wei discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1914:

Admit that Wei discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1915:

Admit that Wei discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1916:

Admit that Oura Ring 1 is prior art to the '677 Patent.

REQUEST FOR ADMISSION 1917:

Admit that Oura Ring 1 discloses a wearable electronic device.

REQUEST FOR ADMISSION 1918:

Admit that Oura Ring 1 discloses a motion sensor.

REQUEST FOR ADMISSION 1919:

Admit that Oura Ring 1 discloses one or more optical sensors.

REQUEST FOR ADMISSION 1920:

Admit that Oura Ring 1 discloses one or more optical sensors that include a light emitting unit.

REQUEST FOR ADMISSION 1921:

Admit that Oura Ring 1 discloses one or more optical sensors that include a light receiving unit.

REQUEST FOR ADMISSION 1922:

Admit that Oura Ring 1 discloses at least one processor.

REQUEST FOR ADMISSION 1923:

Admit that Oura Ring 1 discloses obtaining, using the motion sensor, a first motion signal corresponding to the wearable electronic device, prior to a biological signal being obtained using the one or more optical sensors.

REQUEST FOR ADMISSION 1924:

Admit that Oura Ring 1 discloses emitting light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1925:

Admit that Oura Ring 1 discloses obtaining a biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user.

REQUEST FOR ADMISSION 1926:

Admit that Oura Ring 1 discloses obtaining, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal.

REQUEST FOR ADMISSION 1927:

Admit that Oura Ring 1 discloses refraining from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.

REQUEST FOR ADMISSION 1928:

Admit that Oura Ring 1 discloses determining whether the wearable electronic device is attached to the user using the one or more optical sensors.

REQUEST FOR ADMISSION 1929:

Admit that Oura Ring 1 discloses performing the emitting of the light further based at least in part on a determination that the wearable electronic device is attached to the user.

REQUEST FOR ADMISSION 1930:

Admit that Oura Ring 1 discloses performing the determining of whether the wearable electronic device is attached to the user based at least in part on a determination that the first motion signal satisfies a specified condition.

REQUEST FOR ADMISSION 1931:

Admit that Oura Ring 1 discloses refraining from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.

REQUEST FOR ADMISSION 1932:

Admit that Oura Ring 1 discloses performing the emitting of the light based at least in part on a specified time period.

REQUEST FOR ADMISSION 1933:

Admit that Oura Ring 1 discloses adjusting the specified time period based at least in part on context information corresponding to the biological signal.

REQUEST FOR ADMISSION 1934:

Admit that Oura Ring 1 discloses generating heart rate information corresponding to the user using the biological signal.

REQUEST FOR ADMISSION 1935:

Admit that Oura Ring 1 discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1936:

Admit that Oura Ring 1 discloses a wearable electronic device comprising a first sensor.

REQUEST FOR ADMISSION 1937:

Admit that Oura Ring 1 discloses a second sensor.

REQUEST FOR ADMISSION 1938:

Admit that Oura Ring 1 discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1939:

Admit that Oura Ring 1 discloses activating the second sensor based at least in part on the movement.

REQUEST FOR ADMISSION 1940:

Admit that Oura Ring 1 discloses obtaining, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1941:

Admit that Oura Ring 1 discloses refraining from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.

REQUEST FOR ADMISSION 1942:

Admit that Oura Ring 1 discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1943:

Admit that Oura Ring 1 discloses controlling the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.

REQUEST FOR ADMISSION 1944:

Admit that Oura Ring 1 discloses controlling the second sensor to activate the at least a portion thereof, further based at least in part on a specified time period.

REQUEST FOR ADMISSION 1945:

Admit that Oura Ring 1 discloses adjusting the specified time period based at least in part on context information generated using the first information and the second information.

REQUEST FOR ADMISSION 1946:

Admit that Oura Ring 1 discloses generating heart rate information corresponding to the user using the second information.

REQUEST FOR ADMISSION 1947:

Admit that Oura Ring 1 discloses presenting a notification corresponding to the heart rate information based at least in part on a determination that the heart rate information is higher than a threshold.

REQUEST FOR ADMISSION 1948:

Admit that Oura Ring 1 discloses a wearable electronic device comprising a first sensor and a second sensor.

REQUEST FOR ADMISSION 1949:

Admit that Oura Ring 1 discloses obtaining, using the first sensor, first information corresponding to movement of the wearable electronic device.

REQUEST FOR ADMISSION 1950:

Admit that Oura Ring 1 discloses obtaining, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

REQUEST FOR ADMISSION 1951:

Admit that Oura Ring 1 discloses refraining from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.

REQUEST FOR ADMISSION 1952:

Admit that Oura Ring 1 discloses activating the second sensor prior to obtaining of the second information, in response to the movement of the wearable electronic device.

REQUEST FOR ADMISSION 1953:

Admit that Oura Ring 1 discloses performing the activating of the second sensor based at least in part on a determination that the first information does not satisfy the specified condition.

REQUEST FOR ADMISSION 1954:

Admit that Oura Ring 1 discloses controlling the second sensor to inactivate at least a portion thereof, as at least part of the refraining.

REQUEST FOR ADMISSION 1955:

Admit that Oura Ring 1 discloses the second sensor including a light emitting unit.

REQUEST FOR ADMISSION 1956:

Admit that Oura Ring 1 discloses emitting light, using the light emitting unit, as at least part of the obtaining of the second information.

REQUEST FOR ADMISSION 1957:

Admit that Oura Ring 1 discloses stopping the emitting of the light, using the light emitting unit, as at least part of the refraining.

REQUEST FOR ADMISSION 1958:

Admit that Luo-Larson is prior art to the '789 Patent.

REQUEST FOR ADMISSION 1959:

Admit that Luo-Larson discloses a portable communication device.

REQUEST FOR ADMISSION 1960:

Admit that Luo-Larson discloses a housing.

REQUEST FOR ADMISSION 1961:

Admit that Luo-Larson discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 1962:

Admit that Luo-Larson discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 1963:

Admit that Luo-Larson discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 1964:

Admit that Luo-Larson discloses wireless communication circuitry.

REQUEST FOR ADMISSION 1965:

Admit that Luo-Larson discloses a first PCB.

REQUEST FOR ADMISSION 1966:

Admit that Luo-Larson discloses a second PCB.

REQUEST FOR ADMISSION 1967:

Admit that Luo-Larson discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 1968:

Admit that Luo-Larson discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 1969:

Admit that Luo-Larson discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 1970:

Admit that Luo-Larson discloses a first PCB portion.

REQUEST FOR ADMISSION 1971:

Admit that Luo-Larson discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 1972:

Admit that Luo-Larson discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 1973:

Admit that Luo-Larson discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 1974:

Admit that Luo-Larson discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 1975:

Admit that Luo-Larson discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 1976:

Admit that Luo-Larson discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 1977:

Admit that Luo-Larson discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 1978:

Admit that Luo-Larson discloses a first ground line.

REQUEST FOR ADMISSION 1979:

Admit that Luo-Larson discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 1980:

Admit that Luo-Larson discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 1981:

Admit that Luo-Larson discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 1982:

Admit that Luo-Larson discloses a first electrical component.

REQUEST FOR ADMISSION 1983:

Admit that Luo-Larson discloses a second electrical component.

REQUEST FOR ADMISSION 1984:

Admit that Luo-Larson discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 1985:

Admit that Luo-Larson discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 1986:

Admit that Luo-Larson discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 1987:

Admit that Luo-Larson discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 1988:

Admit that Luo-Larson discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 1989:

Admit that Luo-Larson discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 1990:

Admit that Luo-Larson discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 1991:

Admit that Luo-Larson discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 1992:

Admit that Luo-Larson discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 1993:

Admit that Luo-Larson discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 1994:

Admit that Luo-Larson discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 1995:

Admit that Luo-Larson discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 1996:

Admit that Luo-Larson discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 1997:

Admit that Luo-Larson discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating

layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 1998:

Admit that Luo-Larson discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 1999:

Admit that Luo-Larson discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2000:

Admit that Luo-Larson discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2001:

Admit that Luo-Larson discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2002:

Admit that Luo-Larson discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2003:

Admit that Luo-Larson discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2004:

Admit that Luo-Larson discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2005:

Admit that Luo-Larson discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2006:

Admit that Luo-Larson discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2007:

Admit that Luo-Larson discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2008:

Admit that Sekiguchi is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2009:

Admit that Sekiguchi discloses a portable communication device.

REQUEST FOR ADMISSION 2010:

Admit that Sekiguchi discloses a housing.

REQUEST FOR ADMISSION 2011:

Admit that Sekiguchi discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2012:

Admit that Sekiguchi discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2013:

Admit that Sekiguchi discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2014:

Admit that Sekiguchi discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2015:

Admit that Sekiguchi discloses a first PCB.

REQUEST FOR ADMISSION 2016:

Admit that Sekiguchi discloses a second PCB.

REQUEST FOR ADMISSION 2017:

Admit that Sekiguchi discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2018:

Admit that Sekiguchi discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2019:

Admit that Sekiguchi discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2020:

Admit that Sekiguchi discloses a first PCB portion.

REQUEST FOR ADMISSION 2021:

Admit that Sekiguchi discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2022:

Admit that Sekiguchi discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2023:

Admit that Sekiguchi discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2024:

Admit that Sekiguchi discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2025:

Admit that Sekiguchi discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2026:

Admit that Sekiguchi discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2027:

Admit that Sekiguchi discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2028:

Admit that Sekiguchi discloses a first ground line.

REQUEST FOR ADMISSION 2029:

Admit that Sekiguchi discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2030:

Admit that Sekiguchi discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2031:

Admit that Sekiguchi discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2032:

Admit that Sekiguchi discloses a first electrical component.

REQUEST FOR ADMISSION 2033:

Admit that Sekiguchi discloses a second electrical component.

REQUEST FOR ADMISSION 2034:

Admit that Sekiguchi discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2035:

Admit that Sekiguchi discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2036:

Admit that Sekiguchi discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2037:

Admit that Sekiguchi discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2038:

Admit that Sekiguchi discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2039:

Admit that Sekiguchi discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2040:

Admit that Sekiguchi discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2041:

Admit that Sekiguchi discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2042:

Admit that Sekiguchi discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2043:

Admit that Sekiguchi discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2044:

Admit that Sekiguchi discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2045:

Admit that Sekiguchi discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2046:

Admit that Sekiguchi discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2047:

Admit that Sekiguchi discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2048:

Admit that Sekiguchi discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2049:

Admit that Sekiguchi discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2050:

Admit that Sekiguchi discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2051:

Admit that Sekiguchi discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2052:

Admit that Sekiguchi discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2053:

Admit that Sekiguchi discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2054:

Admit that Sekiguchi discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2055:

Admit that Sekiguchi discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2056:

Admit that Sekiguchi discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2057:

Admit that Sekiguchi discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2058:

Admit that Mow is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2059:

Admit that Mow discloses a portable communication device.

REQUEST FOR ADMISSION 2060:

Admit that Mow discloses a housing.

REQUEST FOR ADMISSION 2061:

Admit that Mow discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2062:

Admit that Mow discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2063:

Admit that Mow discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2064:

Admit that Mow discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2065:

Admit that Mow discloses a first PCB.

REQUEST FOR ADMISSION 2066:

Admit that Mow discloses a second PCB.

REQUEST FOR ADMISSION 2067:

Admit that Mow discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2068:

Admit that Mow discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2069:

Admit that Mow discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2070:

Admit that Mow discloses a first PCB portion.

REQUEST FOR ADMISSION 2071:

Admit that Mow discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2072:

Admit that Mow discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2073:

Admit that Mow discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2074:

Admit that Mow discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2075:

Admit that Mow discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2076:

Admit that Mow discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2077:

Admit that Mow discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2078:

Admit that Mow discloses a first ground line.

REQUEST FOR ADMISSION 2079:

Admit that Mow discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2080:

Admit that Mow discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2081:

Admit that Mow discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2082:

Admit that Mow discloses a first electrical component.

REQUEST FOR ADMISSION 2083:

Admit that Mow discloses a second electrical component.

REQUEST FOR ADMISSION 2084:

Admit that Mow discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2085:

Admit that Mow discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2086:

Admit that Mow discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2087:

Admit that Mow discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2088:

Admit that Mow discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2089:

Admit that Mow discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2090:

Admit that Mow discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2091:

Admit that Mow discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2092:

Admit that Mow discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2093:

Admit that Mow discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2094:

Admit that Mow discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2095:

Admit that Mow discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2096:

Admit that Mow discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2097:

Admit that Mow discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2098:

Admit that Mow discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2099:

Admit that Mow discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2100:

Admit that Mow discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2101:

Admit that Mow discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2102:

Admit that Mow discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2103:

Admit that Mow discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2104:

Admit that Mow discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2105:

Admit that Mow discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2106:

Admit that Mow discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2107:

Admit that Mow discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2108:

Admit that Ganchrow is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2109:

Admit that Ganchrow discloses a portable communication device.

REQUEST FOR ADMISSION 2110:

Admit that Ganchrow discloses a housing.

REQUEST FOR ADMISSION 2111:

Admit that Ganchrow discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2112:

Admit that Ganchrow discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2113:

Admit that Ganchrow discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2114:

Admit that Ganchrow discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2115:

Admit that Ganchrow discloses a first PCB.

REQUEST FOR ADMISSION 2116:

Admit that Ganchrow discloses a second PCB.

REQUEST FOR ADMISSION 2117:

Admit that Ganchrow discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2118:

Admit that Ganchrow discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2119:

Admit that Ganchrow discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2120:

Admit that Ganchrow discloses a first PCB portion.

REQUEST FOR ADMISSION 2121:

Admit that Ganchrow discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2122:

Admit that Ganchrow discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2123:

Admit that Ganchrow discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2124:

Admit that Ganchrow discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2125:

Admit that Ganchrow discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2126:

Admit that Ganchrow discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2127:

Admit that Ganchrow discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2128:

Admit that Ganchrow discloses a first ground line.

REQUEST FOR ADMISSION 2129:

Admit that Ganchrow discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2130:

Admit that Ganchrow discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2131:

Admit that Ganchrow discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2132:

Admit that Ganchrow discloses a first electrical component.

REQUEST FOR ADMISSION 2133:

Admit that Ganchrow discloses a second electrical component.

REQUEST FOR ADMISSION 2134:

Admit that Ganchrow discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2135:

Admit that Ganchrow discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2136:

Admit that Ganchrow discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2137:

Admit that Ganchrow discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2138:

Admit that Ganchrow discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2139:

Admit that Ganchrow discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2140:

Admit that Ganchrow discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2141:

Admit that Ganchrow discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2142:

Admit that Ganchrow discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2143:

Admit that Ganchrow discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2144:

Admit that Ganchrow discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2145:

Admit that Ganchrow discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2146:

Admit that Ganchrow discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2147:

Admit that Ganchrow discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2148:

Admit that Ganchrow discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2149:

Admit that Ganchrow discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2150:

Admit that Ganchrow discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2151:

Admit that Ganchrow discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2152:

Admit that Ganchrow discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2153:

Admit that Ganchrow discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2154:

Admit that Ganchrow discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2155:

Admit that Ganchrow discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2156:

Admit that Ganchrow discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2157:

Admit that Ganchrow discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2158:

Admit that Ikemoto is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2159:

Admit that Ikemoto discloses a portable communication device.

REQUEST FOR ADMISSION 2160:

Admit that Ikemoto discloses a housing.

REQUEST FOR ADMISSION 2161:

Admit that Ikemoto discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2162:

Admit that Ikemoto discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2163:

Admit that Ikemoto discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2164:

Admit that Ikemoto discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2165:

Admit that Ikemoto discloses a first PCB.

REQUEST FOR ADMISSION 2166:

Admit that Ikemoto discloses a second PCB.

REQUEST FOR ADMISSION 2167:

Admit that Ikemoto discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2168:

Admit that Ikemoto discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2169:

Admit that Ikemoto discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2170:

Admit that Ikemoto discloses a first PCB portion.

REQUEST FOR ADMISSION 2171:

Admit that Ikemoto discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2172:

Admit that Ikemoto discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2173:

Admit that Ikemoto discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2174:

Admit that Ikemoto discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2175:

Admit that Ikemoto discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2176:

Admit that Ikemoto discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2177:

Admit that Ikemoto discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2178:

Admit that Ikemoto discloses a first ground line.

REQUEST FOR ADMISSION 2179:

Admit that Ikemoto discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2180:

Admit that Ikemoto discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2181:

Admit that Ikemoto discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2182:

Admit that Ikemoto discloses a first electrical component.

REQUEST FOR ADMISSION 2183:

Admit that Ikemoto discloses a second electrical component.

REQUEST FOR ADMISSION 2184:

Admit that Ikemoto discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2185:

Admit that Ikemoto discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2186:

Admit that Ikemoto discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2187:

Admit that Ikemoto discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2188:

Admit that Ikemoto discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2189:

Admit that Ikemoto discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2190:

Admit that Ikemoto discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2191:

Admit that Ikemoto discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2192:

Admit that Ikemoto discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2193:

Admit that Ikemoto discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2194:

Admit that Ikemoto discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2195:

Admit that Ikemoto discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2196:

Admit that Ikemoto discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2197:

Admit that Ikemoto discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2198:

Admit that Ikemoto discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2199:

Admit that Ikemoto discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2200:

Admit that Ikemoto discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2201:

Admit that Ikemoto discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2202:

Admit that Ikemoto discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2203:

Admit that Ikemoto discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2204:

Admit that Ikemoto discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2205:

Admit that Ikemoto discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2206:

Admit that Ikemoto discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction

layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2207:

Admit that Ikemoto discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2208:

Admit that Kim is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2209:

Admit that Kim discloses a portable communication device.

REQUEST FOR ADMISSION 2210:

Admit that Kim discloses a housing.

REQUEST FOR ADMISSION 2211:

Admit that Kim discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2212:

Admit that Kim discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2213:

Admit that Kim discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2214:

Admit that Kim discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2215:

Admit that Kim discloses a first PCB.

REQUEST FOR ADMISSION 2216:

Admit that Kim discloses a second PCB.

REQUEST FOR ADMISSION 2217:

Admit that Kim discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2218:

Admit that Kim discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2219:

Admit that Kim discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2220:

Admit that Kim discloses a first PCB portion.

REQUEST FOR ADMISSION 2221:

Admit that Kim discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2222:

Admit that Kim discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2223:

Admit that Kim discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2224:

Admit that Kim discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2225:

Admit that Kim discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2226:

Admit that Kim discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2227:

Admit that Kim discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2228:

Admit that Kim discloses a first ground line.

REQUEST FOR ADMISSION 2229:

Admit that Kim discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2230:

Admit that Kim discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2231:

Admit that Kim discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2232:

Admit that Kim discloses a first electrical component.

REQUEST FOR ADMISSION 2233:

Admit that Kim discloses a second electrical component.

REQUEST FOR ADMISSION 2234:

Admit that Kim discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2235:

Admit that Kim discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2236:

Admit that Kim discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2237:

Admit that Kim discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2238:

Admit that Kim discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2239:

Admit that Kim discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2240:

Admit that Kim discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2241:

Admit that Kim discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2242:

Admit that Kim discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2243:

Admit that Kim discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2244:

Admit that Kim discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2245:

Admit that Kim discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2246:

Admit that Kim discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2247:

Admit that Kim discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2248:

Admit that Kim discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2249:

Admit that Kim discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2250:

Admit that Kim discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2251:

Admit that Kim discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2252:

Admit that Kim discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2253:

Admit that Kim discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2254:

Admit that Kim discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2255:

Admit that Kim discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2256:

Admit that Kim discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and

the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2257:

Admit that Kim discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2258:

Admit that Kim '978 is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2259:

Admit that Kim '978 discloses a portable communication device.

REQUEST FOR ADMISSION 2260:

Admit that Kim '978 discloses a housing.

REQUEST FOR ADMISSION 2261:

Admit that Kim '978 discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2262:

Admit that Kim '978 discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2263:

Admit that Kim '978 discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2264:

Admit that Kim '978 discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2265:

Admit that Kim '978 discloses a first PCB.

REQUEST FOR ADMISSION 2266:

Admit that Kim '978 discloses a second PCB.

REQUEST FOR ADMISSION 2267:

Admit that Kim '978 discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2268:

Admit that Kim '978 discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2269:

Admit that Kim '978 discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2270:

Admit that Kim '978 discloses a first PCB portion.

REQUEST FOR ADMISSION 2271:

Admit that Kim '978 discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2272:

Admit that Kim '978 discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2273:

Admit that Kim '978 discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2274:

Admit that Kim '978 discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2275:

Admit that Kim '978 discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2276:

Admit that Kim '978 discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2277:

Admit that Kim '978 discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2278:

Admit that Kim '978 discloses a first ground line.

REQUEST FOR ADMISSION 2279:

Admit that Kim '978 discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2280:

Admit that Kim '978 discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2281:

Admit that Kim '978 discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2282:

Admit that Kim '978 discloses a first electrical component.

REQUEST FOR ADMISSION 2283:

Admit that Kim '978 discloses a second electrical component.

REQUEST FOR ADMISSION 2284:

Admit that Kim '978 discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2285:

Admit that Kim '978 discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2286:

Admit that Kim '978 discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2287:

Admit that Kim '978 discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2288:

Admit that Kim '978 discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2289:

Admit that Kim '978 discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2290:

Admit that Kim '978 discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2291:

Admit that Kim '978 discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2292:

Admit that Kim '978 discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2293:

Admit that Kim '978 discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2294:

Admit that Kim '978 discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2295:

Admit that Kim '978 discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2296:

Admit that Kim '978 discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2297:

Admit that Kim '978 discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2298:

Admit that Kim '978 discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2299:

Admit that Kim '978 discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2300:

Admit that Kim '978 discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2301:

Admit that Kim '978 discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2302:

Admit that Kim '978 discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2303:

Admit that Kim '978 discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2304:

Admit that Kim '978 discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2305:

Admit that Kim '978 discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2306:

Admit that Kim '978 discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2307:

Admit that Kim '978 discloses that the fourth insulating layer includes the second material.

REQUEST FOR ADMISSION 2308:

Admit that Ikemoto '346 is prior art to the '789 Patent.

REQUEST FOR ADMISSION 2309:

Admit that Ikemoto '346 discloses a portable communication device.

REQUEST FOR ADMISSION 2310:

Admit that Ikemoto '346 discloses a housing.

REQUEST FOR ADMISSION 2311:

Admit that Ikemoto '346 discloses a first conduction portion forming a first portion of a side surface of the portable communication device.

REQUEST FOR ADMISSION 2312:

Admit that Ikemoto '346 discloses a second conduction portion forming a second portion of the side surface.

REQUEST FOR ADMISSION 2313:

Admit that Ikemoto '346 discloses a housing including a first conduction portion forming a first portion of a side surface of the portable communication device and a second conduction portion forming a second portion of the side surface, the first conduction portion operating as a first antenna and the second conduction portion operating as a second antenna.

REQUEST FOR ADMISSION 2314:

Admit that Ikemoto '346 discloses wireless communication circuitry.

REQUEST FOR ADMISSION 2315:

Admit that Ikemoto '346 discloses a first PCB.

REQUEST FOR ADMISSION 2316:

Admit that Ikemoto '346 discloses a second PCB.

REQUEST FOR ADMISSION 2317:

Admit that Ikemoto '346 discloses a PCB including a plurality of layers.

REQUEST FOR ADMISSION 2318:

Admit that Ikemoto '346 discloses a PCB including one or more conductive layers.

REQUEST FOR ADMISSION 2319:

Admit that Ikemoto '346 discloses a PCB including one or more insulation layers.

REQUEST FOR ADMISSION 2320:

Admit that Ikemoto '346 discloses a first PCB portion.

REQUEST FOR ADMISSION 2321:

Admit that Ikemoto '346 discloses a second PCB portion in contact with the first PCB portion.

REQUEST FOR ADMISSION 2322:

Admit that Ikemoto '346 discloses a second PCB portion that is more flexible than the first PCB portion.

REQUEST FOR ADMISSION 2323:

Admit that Ikemoto '346 discloses a third PCB portion in contact with the second PCB portion.

REQUEST FOR ADMISSION 2324:

Admit that Ikemoto '346 discloses a third PCB portion that is less flexible than the second PCB portion.

REQUEST FOR ADMISSION 2325:

Admit that Ikemoto '346 discloses a fourth PCB portion in contact with the third PCB portion.

REQUEST FOR ADMISSION 2326:

Admit that Ikemoto '346 discloses a fourth PCB portion that is more flexible than the third PCB portion.

REQUEST FOR ADMISSION 2327:

Admit that Ikemoto '346 discloses a plurality of lines located from the first PCB portion to the fourth PCB portion through the second PCB portion and the third PCB portion.

REQUEST FOR ADMISSION 2328:

Admit that Ikemoto '346 discloses a first ground line.

REQUEST FOR ADMISSION 2329:

Admit that Ikemoto '346 discloses a second ground line at least partially spaced apart from the first ground line.

REQUEST FOR ADMISSION 2330:

Admit that Ikemoto '346 discloses a first signal line located between the first ground line and the second ground line.

REQUEST FOR ADMISSION 2331:

Admit that Ikemoto '346 discloses a second signal line located between the first signal line and the second ground line.

REQUEST FOR ADMISSION 2332:

Admit that Ikemoto '346 discloses a first electrical component.

REQUEST FOR ADMISSION 2333:

Admit that Ikemoto '346 discloses a second electrical component.

REQUEST FOR ADMISSION 2334:

Admit that Ikemoto '346 discloses a first rigid PCB portion.

REQUEST FOR ADMISSION 2335:

Admit that Ikemoto '346 discloses a first flexible PCB portion in contact with the first rigid PCB portion.

REQUEST FOR ADMISSION 2336:

Admit that Ikemoto '346 discloses a second rigid PCB portion in contact with the first flexible PCB portion.

REQUEST FOR ADMISSION 2337:

Admit that Ikemoto '346 discloses a second flexible PCB portion in contact with the second rigid PCB portion.

REQUEST FOR ADMISSION 2338:

Admit that Ikemoto '346 discloses a first insulating layer forming a first exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2339:

Admit that Ikemoto '346 discloses a first conduction layer located on or above the first insulating layer.

REQUEST FOR ADMISSION 2340:

Admit that Ikemoto '346 discloses a second insulating layer located on or above the first conduction layer.

REQUEST FOR ADMISSION 2341:

Admit that Ikemoto '346 discloses a second conduction layer located on or above the second insulating layer.

REQUEST FOR ADMISSION 2342:

Admit that Ikemoto '346 discloses a third insulating layer forming a second exterior surface of a rigid PCB portion.

REQUEST FOR ADMISSION 2343:

Admit that Ikemoto '346 discloses a first insulating layer of a flexible PCB portion including a material different from the first material of the rigid PCB portion.

REQUEST FOR ADMISSION 2344:

Admit that Ikemoto '346 discloses a second insulating layer of a flexible PCB portion having a thickness thinner than the first thickness of the rigid PCB portion.

REQUEST FOR ADMISSION 2345:

Admit that Ikemoto '346 discloses a third ground line located between the first signal line and the second signal line.

REQUEST FOR ADMISSION 2346:

Admit that Ikemoto '346 discloses an insulating layer on which the first ground line, the second ground line, the third ground line, the first signal line, and the second signal line are located, and a ground plate located below the insulating layer.

REQUEST FOR ADMISSION 2347:

Admit that Ikemoto '346 discloses the ground plate electrically connected with the first ground line through a first conduction via formed in a first portion of the insulating layer, the second ground line through a second conduction via formed in a second portion of the insulating layer, and the third ground line through a third conduction via formed in a third portion of the insulating layer.

REQUEST FOR ADMISSION 2348:

Admit that Ikemoto '346 discloses a solder resist ink forming at least a part of an exterior surface of the first PCB portion or the third PCB portion.

REQUEST FOR ADMISSION 2349:

Admit that Ikemoto '346 discloses a fifth PCB portion in contact with the fourth PCB portion and being less flexible than the fourth PCB portion.

REQUEST FOR ADMISSION 2350:

Admit that Ikemoto '346 discloses a first connector for a connection with the antenna on the first PCB portion.

REQUEST FOR ADMISSION 2351:

Admit that Ikemoto '346 discloses a second connector for a connection with the wireless communication circuitry on the fifth PCB portion.

REQUEST FOR ADMISSION 2352:

Admit that Ikemoto '346 discloses a first ending portion of the first signal line and a second ending portion of the second signal line in contact with the second connector.

REQUEST FOR ADMISSION 2353:

Admit that Ikemoto '346 discloses a second PCB on which the wireless communication circuitry is located.

REQUEST FOR ADMISSION 2354:

Admit that Ikemoto '346 discloses the first ground line and the second ground line electrically connected with a ground member located in the second PCB or in the first PCB portion.

REQUEST FOR ADMISSION 2355:

Admit that Ikemoto '346 discloses a second insulating layer of each of the first flexible PCB portion and the second flexible PCB portion that includes the second material.

REQUEST FOR ADMISSION 2356:

Admit that Ikemoto '346 discloses each of the first flexible PCB portion and the second flexible PCB portion including a fourth insulating layer located between the second conduction layer and the third insulating layer, and a third conduction layer located between the third insulating layer and the fourth insulating layer.

REQUEST FOR ADMISSION 2357:

Admit that Ikemoto '346 discloses that the fourth insulating layer includes the second material.

Dated: May 19, 2026
