71	Mercier Rebuttal Report
----	-------------------------

I. INTRODUCTION

Samsung respectfully moves for summary determination of infringement and domestic industry (“DI”) technical prong for two of the four asserted patents, for which Oura’s technical experts have presented ***no*** rebuttal opinions, let alone any contrary evidence or factual disputes, that could counter findings of infringement and technical DI.

There is no genuine dispute that Oura’s ring products infringe the Asserted Infringement Claims¹ of the ’677 and ’675 Patents. Samsung has provided extensive ***and un rebutted*** evidence of infringement. Oura’s non-infringement expert, Dr. Mortazavi, does nothing more than provide an improper “practicing the prior art” analysis based on an earlier generation of Oura ring product, which the ALJ already rejected as improper and irrelevant to infringement.

There is also no genuine dispute that the technical DI requirement is satisfied for the Asserted DI Claims of the ’677 and ’675 Patents.² Here, Oura provides no response whatsoever to Samsung’s technical DI evidence. In fact, Oura’s technical DI expert, Dr. Mercier, does not provide ***any*** opinion at all in his rebuttal report for the Asserted DI Claims.

Oura has not presented any factual dispute or rebuttal expert testimony in opposition to Samsung regarding infringement and technical DI. Summary determination should be granted.

II. LEGAL STANDARD

A party is entitled to a summary determination “if pleadings and any depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a summary determination as a matter of law.” 19 C.F.R. § 210.18(b). A party opposing a summary

¹ The “Asserted Infringement Claims” are Claims 1-4, 9, 11, and 16 of U.S. Patent No. 10,945,677 (“’677 Patent”) and Claims 13, 15, and 20 of U.S. Patent No. 10,231,675 (“’675 Patent”).

² The “Asserted DI Claims” are Claims 9 and 16 of the ’677 Patent and Claims 13, 15, and 20 of the ’675 Patent.

[REDACTED]

determination motion “must set forth specific facts showing that there is a genuine issue of fact for the evidentiary hearing under § 210.36(a)(1) or (2).” Infringement is a question of fact, *Kinik Co. v. Int’l Trade Comm’n*, 362 F.3d 1359, 1361 (Fed. Cir. 2004), as is whether the technical prong of the DI requirement is satisfied, *Apple Inc. v. Int’l Trade Comm’n*, 169 F.4th 1363, 1372 (Fed. Cir. 2026).

III. SUMMARY DETERMINATION OF INFRINGEMENT IS WARRANTED

There is no genuine dispute that Oura’s Accused Products practice each and every limitation of the Asserted Infringement Claims. The Accused Products include the Oura Ring 4 and all Oura ring products with materially similar hardware functionality and firmware architecture, including the Oura Ring 5 [REDACTED] Oura’s own expert conceded the Oura Ring 4 is representative of [REDACTED] insofar as these two patents are concerned. Ex. 3, Mortazavi Reb. Rep. ¶¶383, 384, 552, 554; *see* SUMF1-2, 28-29. As described in the claim-by-claim analysis below for each Asserted Patent, Samsung and its technical expert, Dr. Welch, have conducted extensive analysis of technical documents, source code, and deposition testimony to demonstrate that Oura’s Accused Products infringe. *See generally* Ex. 1, Welch Op. Rep. ¶¶350-647.

Samsung’s expert testimony and supporting evidence stand unrebutted. Oura and its expert Dr. Mortazavi have not even attempted to argue non-infringement.

Rather than address Samsung’s clear showing of infringement, Oura’s expert Dr. Mortazavi devotes his entire rebuttal to arguing that “infringement without invalidity” is not possible based on a legally improper comparison of Oura Ring 4 to an alleged prior art product,

the Oura Ring 1.³ See, e.g., Ex. 3, Mortazavi Reb. Rep. ¶¶138, 162, 384, 440; see also generally Ex. 3, Mortazavi Reb. Rep. ¶¶133-550. As Dr. Mortazavi admits, the purpose of this comparison is purportedly to show that “to the extent that the Oura Ring 4 infringes any of the Asserted Claims of the ’677 Patent [and ’675 Patent] are anticipated, and thus, invalid by the Oura Ring Gen. 1.” Ex. 3, Mortazavi Reb. Rep. ¶¶134, 386.

But the Federal Circuit has made “unequivocally clear” that “there is no ‘practicing the prior art’ defense to literal infringement.” *Tate Access Floors, Inc. v. Interface Architectural Res., Inc.*, 279 F.3d 1357, 1365 (Fed. Cir. 2002). Following this guidance, the ALJ previously noted, and Oura agreed, that a “practicing the prior art defense to infringement is legally inappropriate.” July 2, 2026 Case Management Conference Transcript (“CMC Tr.”) at 3:25-4:3, 8:4-7. Non-infringement is determined by “comparing [the claims] to the accused device,” “not by comparing the accused device to prior art.” *Tate*, 279 F.3d at 1366; CMC. Tr. at 12:1-14. Oura’s contention that Oura Ring Gen 1 supposedly anticipates is thus entirely irrelevant to infringement.

Summary determination regarding infringement should be granted because Samsung has met its burden on infringement and Oura has failed to provide any defense, let alone any genuine issue of material fact.

³ In his rebuttal report, Dr. Mortazavi sometimes includes gratuitous, unsupported assertions that “Dr. Welch did not prove by a preponderance of the evidence” that the Accused Product infringe. See, e.g., *id.* at ¶¶68, 133, 137, 205, 217, 227, 234, 245, 254, 341, 385, 389, 479. Such assertions, completely unsubstantiated by any evidence, “do not give rise to a genuine issue of material fact.” *Shopify Inc. v. Express Mobile, Inc.*, No. 2024-1977, 2025 WL 3511442, at *4 (Fed. Cir. Dec. 8, 2025) (determining that an expert’s conclusory infringement opinion that a file and a copy of the file “are the same file” despite differences in code did not suffice to raise a genuine dispute regarding infringement).

[REDACTED]

A. The '677 Patent

The Accused Products infringes Claims 1-4, 9, 11, and 16 of the '677 Patent as those products meet each and every limitation of those claims as detailed below.

1. Independent Claim 1

a. Limitation [1-pre]: “A wearable electronic device comprising:”

To the extent the preamble is limiting, the Accused Products are a wearable electronic device. The Accused Products are a wearable electronic smartring. SUMF3.

b. Limitation [1-a]: “a motion sensor;”

The Accused Products include “a motion sensor,” an accelerometer, [REDACTED]

[REDACTED] in the Oura Ring 4, that measures motion as illustrated below.

SUMF4.

[REDACTED]

c. Limitation [1-b]: “one or more optical sensors includes a light emitting unit and a light receiving unit; and”

The Accused Products include “one or more optical sensors” (a blood oxygen (SpO2) sensor) comprising a light emitting unit and a light receiving unit. For example, as described in Oura’s technical documentation below, [REDACTED]

[REDACTED]

[REDACTED] SUMF5.

[REDACTED]

d. Limitation [1-c]: “at least one processor configured to: obtain, using the motion sensor, a first motion signal corresponding to the wearable electronic device prior to a biological signal being obtained using the one or more optical sensors,”

The Accused Products include at least one processor configured to obtain, using the motion sensor, a first motion signal corresponding to the wearable electronic device. For example, as

[REDACTED]

shown below, the Oura Ring 4 includes an

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED], the accelerometer obtains such motion signals which, as described below, are used to determine whether the user is at rest, which determines whether to begin measuring [REDACTED]

[REDACTED]

[REDACTED]

e. Limitation [1-d]: “emit light using the light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition,”

Before obtaining a biological signal, the Accused Products emit light using a light emitting unit based at least in part on a determination that the first motion signal satisfies a specified condition. For example, [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

f. Limitation [1-e]: “obtain the biological signal corresponding to a user using the light receiving unit based at least in part on reflected light which the light is reflected on the user,”

The Accused Products obtain the biological signal using its light receiving unit based at least in part on reflected light. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

SUMF8.

g. Limitation [1-f]: “obtain, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal,”

The Accused Products obtain, using the motion sensor, a second motion signal corresponding to the wearable electronic device during the obtaining of the biological signal. The Accused Products continue to monitor motion using the accelerometer (“obtain, using the motion sensor, a second motion signal”) while the [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

SUMF9-10.

h. Limitation [1-g]: “and refrain from the emitting of the light, based at least in part on a determination that the second motion signal does not satisfy the specified condition.”

The Accused Products refrain from the emitting of the light based at least in part on a determination that the second motion signal does not satisfy the specified condition. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

. SUMF9-10.

3. Dependent Claim 3: “The wearable electronic device wherein the at least one processor is further configured to:

The Accused Products satisfy this limitation. The Accused Products use accelerometer

- [REDACTED]
4. **Dependent Claim 4: “The wearable electronic device of claim 2, wherein the at least one processor is further configured to: refrain from the emitting of the light further based at least in part on a determination that the wearable electronic device is not attached to the user.”**

The Accused Products satisfy this limitation. is the Accused Products are [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] SUMF13.

5. **Independent Claim 9**

a. **Limitation [9-pre]: “A wearable electronic device comprising:”**

To the extent the preamble is limiting, the Accused Products are a wearable electronic device, namely, smartrings. *See* Limitation [1-pre]; SUMF14.

b. **Limitation [9-a]: “a first sensor;”**

The Accused Products include a first sensor which comprises an accelerometer, such as the

[REDACTED] accelerometer in the Oura Ring 4. *See* Limitation [1-a]; SUMF15.

c. **Limitation [9-b]: “a second sensor; and”**

The Accused Products include a second sensor. The claimed “second sensor” is the ring’s SpO2 sensor described above. *See* Limitation [1-b]; SUMF16.

d. **Limitation [9-c]: “at least one processor configured to: obtain, using the first sensor, first information corresponding to movement of the wearable electronic device,”**

The Accused Products include at least one processor configured to obtain, using the first sensor, first information corresponding to movement of the device. The claimed processor, [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] using the accelerometer. *See*
Limitation [1-c]; SUMF17.

e. Limitation [9-d]: “activate the second sensor based at least in part of the movement,”

The Accused Products activate the second sensor based at least in part on the movement.

The Accused Products determine whether a user is active or at rest by [REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED]

f. Limitation [9-e]: “obtain, using the activated second sensor, second information corresponding to biological signal related to a user during the obtaining of the first information,”

The Accused Products obtain, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information.

[REDACTED]
[REDACTED]
[REDACTED]

[REDACTED] SUMF19.

[REDACTED]

- g. Limitation [9-f]: “and refrain from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.”**

The Accused Products refrain from obtaining the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range. The Accused Products continually [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. SUMF20.

- 6. Dependent Claim 11: “The wearable electronic device of claim 10, wherein the at least one processor is further configured to: control the second sensor to activate the at least a portion thereof, based at least in part on a determination that the first information satisfies another specified range lower than the specified range after the refraining.”**

The Accused Products satisfy this limitation. The Accused Products constantly monitor motion (“first information”). [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. SUMF21.

7. Independent Claim 16

- a. Limitation [16-pre]: “A wearable electronic device comprising:”**

To the extent the preamble is limiting, the Accused Products are a wearable electronic device. *See* Limitation [1-pre]; SUMF22.

b. Limitation [16-a]: “a first sensor;”

The Accused Products include a first sensor. The claimed “first sensor” is the accelerometer described above. *See* Limitation [9-a]; SUMF23.

c. Limitation [16-b]: “a second sensor; and”

The Accused Products include a second sensor. The claimed “second sensor” is the  sensor described above. *See* Limitation [9-b]; SUMF24.

d. Limitation [16-c]: “at least one processor configured to: obtain, using the first sensor, first information corresponding to movement of the wearable electronic device,”

The Accused Products include at least one processor configured to obtain, using the first sensor, first information corresponding to movement of the device. The claimed processor obtains, using the accelerometer, “first information” corresponding to movement of the device. *See* Limitation [9-c]; SUMF25.

e. Limitation [16-d]: “obtain, using the second sensor, second information corresponding to biological signal related to a user during the obtaining of the first information,”

The Accused Products obtain, using the second sensor, “second information” corresponding to a biological signal related to a user during the obtaining of the first information. When the  sensor is active, the Accused Products obtain SpO2 information (“second information”) at the same time they are obtaining motion information (“first information”). *See* Limitation [9-e]; SUMF26.

f. Limitation [16-e]: “and refrain from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.”

The Accused Products refrain from obtaining the second information based at least in part on a determination that the first information satisfies a specified condition. The Accused Product

[REDACTED]

refrain from obtaining the “second information,” [REDACTED]

[REDACTED] See Limitation [1-g]; SUMF27.

B. The '675 Patent

The Accused Product infringe Claims 13, 15, and 20 of the '675 Patent as those products meet each and every limitation of those claims as detailed below.

1. Independent Claim 13

a. Limitation [13-pre]: “A method comprising:”

To the extent the preamble is limiting, the Accused Products practice the method of Claim 13, as described in the steps below. SUMF30.

b. Limitation [13-a]: “determining whether an electronic device is worn on a part of a user’s body using at least one first sensor of the electronic device;”

The Accused Products determine whether the electronic device is worn on a part of a user’s body using at least one first sensor. The Accused Products perform wear detection using accelerometer data, measured by a “first sensor,” an accelerometer, such as the Oura Ring 4’s

[REDACTED] SUMF31. The Accused Products use [REDACTED]

[REDACTED] SUMF31.

c. Limitation [13-b]: “acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user’s body;”

The Accused Products acquire first information on a motion of the electronic device using at least a part of the first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the device is worn. The “first period of time” is when the Accused Products monitor motion information to determine whether it is being worn.

[REDACTED]

Specifically, the Oura Ring 4 [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. That monitoring happens

immediately after it is determined that the device is worn. SUMF32.

- d. Limitation [13-c]: “activating at least one second sensor based on at least a part of the first information on the motion of the electronic device;”**

The Accused Products activate at least one second sensor based on at least a part of the first information on the motion of the electronic device. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

- e. **Limitation [13-d]: “detecting a biometric information of the user using the activated at least one second sensor;”**

The Accused Products detect biometric information of the user using the activated second sensor. [REDACTED]

[REDACTED] SUMF34.

- f. **Limitation [13-e]: “during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor;”**

During detecting the biometric information, the Accused Products acquire second information on a motion of the electronic device using at least a part of the first sensor. The Accused Products continue to monitor motion information, including during the period when the

[REDACTED]

(“biometric information”). SUMF35.

- g. **Limitation [13-f]: “and in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.”**

In response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, the Accused Products inactivate the second sensor.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] SUMF36.

2. **Dependent Claim 15: “The method of claim 13, further comprising: acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes; and activating the at least one second sensor based on at least a part of the additional information.”**

The Accused Products practice claim 15. The “first period of time” is when the Accused Products monitor motion information to determine whether an unworn device has been worn on the user’s body, and the “second period of time” is when it monitors motion information to determine whether to activate or inactivate a biometric sensor. The claimed “third period of time”—when the device again monitors motion information to determine whether to re-activate a biometric sensor—begins immediately after the second period of time, once motion [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] See Limitations [13-c], [13-d], and [13-f]; SUMF37.

3. **Independent Claim 20**

- a. **Limitation [20-pre]: “An electronic device comprising:”**

To the extent the preamble is limiting, the Accused Products are an electronic device. The Accused Products are electronic smartwatches. See Limitation [13-pre]; SUMF38.

[REDACTED]

b. Limitation [20-a]: “at least one first sensor;”

The Accused Products include at least one first sensor—a motion sensor, such as the Oura Ring 4’s [REDACTED] See Limitation [13-a]; SUMF39.

c. Limitation [20-b]: “at least one second sensor;”

The Accused Products include at least one second sensor—a biological sensor such as an SpO2 sensor. For example, the Oura Ring 4 includes [REDACTED]

[REDACTED]

[REDACTED] See Limitations [13-c]-[13-d]; SUMF40.

d. Limitation [20-c]: “a memory; and”

The Accused Products include a memory. For example, the Oura Ring 4 [REDACTED]

[REDACTED]

[REDACTED] See SUMF41.

e. Limitation [20-d]: “at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory,”

The Accused Products include at least one processor electrically connected to the first sensor, the second sensor, and the memory. For example, the Oura Ring 4’s [REDACTED]

[REDACTED].

See Limitations [20-a]-[20-b] and [1-c]; SUMF42.

f. Limitation [20-e]: “wherein the memory stores one or more computer programs including instructions which, when executed by the at least one processor, cause the at least one processor to: determine whether the electronic device is worn on a part of a user’s body,”

The memory of each Accused Product stores one or more computer programs including instructions which, when executed by the processor, cause it to determine whether the electronic device is worn on a part of a user’s body. The Accused Products contain firmware that, when

[REDACTED]

executed, [REDACTED]

[REDACTED] See Limitation [13-a]; SUMF43.

- g. **Limitation [20-f]: “when the electronic device is worn on the part of the user’s body, determine a motion of the electronic device based on first information obtained by the at least one first sensor,”**

When the electronic device is worn, the Accused Products determine a motion of the electronic device based on first information obtained by the first sensor. After it is worn, the Accused Products begin [REDACTED]

[REDACTED] See Limitation [13-b]; SUMF44.

- h. **Limitation [20-g]: “determine whether to identify biometric information based on the motion of the electronic device,”**

The Accused Products determine whether to identify biometric information based on the motion of the electronic device. The Accused Products [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

- i. **Limitation [20-h]: “in response to determining to identify biometric information, identify the biometric information of the user through the at least one second sensor,”**

In response to determining to identify biometric information, the Accused Products identify the biometric information of the user through the second sensor. See Limitation [13-d]; SUMF46.

- [REDACTED]
- j. **Limitation [20-i]: “during identifying the biometric information of the user, obtain second information on a motion of the electronic device using the at least one first sensor,”**

During identifying the biometric information of the user, the Accused Products obtain second information on a motion of the electronic device using the first sensor. *See* Limitation [13-e]; SUMF47.

- k. **Limitation [20-j]: “and in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivate the at least one second sensor.”**

In response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, the Accused Products inactivate the second sensor. When the Accused Products’ motion [REDACTED] (i.e., “at least one second sensor”). *See* Limitation [13-f]; SUMF48.

IV. ARGUMENT: DOMESTIC INDUSTRY TECHNICAL PRONG

There is no genuine dispute that the DI Products practice the Asserted DI Claims. In fact, Oura has made no attempt at rebutting the extensive evidence and analysis provided by Samsung’s expert Dr. Welch. In particular, Oura’s technical DI expert, Dr. Mercier, provided rebuttal opinions on technical DI for only *some* of the claims across the asserted patents at issue in this case—he provided *none* for the Asserted DI Claims from the ’675 and ’677 Patents. *See generally*, Ex. 71, Mercier Reb. Rep. at I-X (Table of Contents). Accordingly, the ALJ should grant summary determination on the technical DI prong for the Asserted DI Claims based on the undisputed and un rebutted evidence that Samsung as set forth below.

A. The ’677 Patent

The DI Products practice Claims 9 and 16 of the ’677 Patent as those products meet each and every limitation of those claims as detailed below.

[REDACTED]

1. Independent Claim 9

a. Limitation [9-pre]: “A wearable electronic device comprising:”

To the extent the preamble is limiting, each of the Domestic Industry Products is a wearable electronic device. The Galaxy Watch products are electronic smartwatches worn on a user’s wrist, and the Galaxy Ring is an electronic smartring worn on a user’s finger. SUMF49.

b. Limitation [9-a]: “a first sensor;”

Each of the Domestic Industry Products includes a first sensor—a motion sensor. Each product includes an accelerometer. Specifically: Galaxy Watch4, Watch5, Watch6, and Watch7 include an [REDACTED] accelerometer; Watch8 includes an L [REDACTED] [REDACTED]; and Galaxy Ring includes an [REDACTED], each of which measures motion of the device. SUMF50.

c. Limitation [9-b]: “a second sensor; and”

Each of the Domestic Industry Products includes a second sensor—an optical [REDACTED] sensor, with light emitting units (green, red, and IR LEDs) and light receiving units (photodetectors) used to measure the data from which [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. *Id.*

[REDACTED]

[REDACTED]

- d. Limitation [9-c]: “at least one processor configured to: obtain, using the first sensor, first information corresponding to movement of the wearable electronic device,”**

Each of the Domestic Industry Products includes at least one processor configured to obtain, using the first sensor, first information corresponding to movement of the device. Each product includes at least one processor—

[REDACTED]

[REDACTED]

—that is coupled to the accelerometer and obtains from it the first information (motion signals) corresponding to movement of the device. SUMF52.

- e. Limitation [9-d]: “activate the second sensor based at least in part of the movement,”**

Each of the Domestic Industry Products activates the second sensor based at least in part on the movement. Each product uses accelerometer data (the “first information”) to detect sleep; upon determining that the user is asleep,

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] SUMF53.

- f. Limitation [9-e]: “obtain, using the activated second sensor, second information corresponding to biological signal related to a user during the obtaining of the first information,”**

Each of the Domestic Industry Products obtains, using the activated second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

- g. Limitation [9-f]: “and refrain from the obtaining of the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range.”**

Each of the Domestic Industry Products refrains from obtaining the second information using the activated second sensor based at least in part on a determination that the first information satisfies a specified range. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

2. Independent Claim 16

a. Limitation [16-pre]: “A wearable electronic device comprising:”

To the extent the preamble is limiting, each of the Domestic Industry Products is a wearable electronic device. *See* Limitation [9-pre]. SUMF56.

b. Limitation [16-a]: “a first sensor;”

Each of the Domestic Industry Products includes a first sensor. The claimed “first sensor” is the accelerometer described above. *See* Limitation [9-a]. SUMF57.

c. Limitation [16-b]: “a second sensor; and”

Each of the Domestic Industry Products includes a second sensor. The claimed “second sensor” is the  sensor described above. *See* Limitation [9-b]; SUMF58.

d. Limitation [16-c]: “at least one processor configured to: obtain, using the first sensor, first information corresponding to movement of the wearable electronic device,”

Each of the Domestic Industry Products includes at least one processor configured to obtain, using the first sensor, first information corresponding to movement of the device. *See* Limitation [9-c]; SUMF59.

e. Limitation [16-d]: “obtain, using the second sensor, second information corresponding to biological signal related to a user during the obtaining of the first information,”

Each of the Domestic Industry Products obtains, using the second sensor, second information corresponding to a biological signal related to a user during the obtaining of the first information. *See* Limitation [9-e]; SUMF60.

[REDACTED]

- f. **Limitation [16-e]: “and refrain from the obtaining of the second information based at least in part on a determination that the first information satisfies a specified condition.”**

Each of the Domestic Industry Products refrains from obtaining the second information based at least in part on a determination that the first information satisfies a specified condition.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] See Limitation [9-f]; SUMF61.

B. The '675 Patent

The DI Products practice Claims 13, 15, and 20 of the '675 Patent as those products meet each and every limitation of those claims as detailed below.

1. Independent Claim 13

- a. **Limitation [13-pre]: “A method comprising:”**

To the extent the preamble is limiting, each of the Domestic Industry Products practices the method of Claim 13, as described in the steps below. SUMF62.

- b. **Limitation [13-a]: “determining whether an electronic device is worn on a part of a user’s body using at least one first sensor of the electronic device;”**

Each of the Domestic Industry Products determines whether the electronic device is worn on a part of a user’s body using at least one first sensor. Each product includes a motion sensor—

[REDACTED]

[REDACTED]

[REDACTED])—and [REDACTED]

[REDACTED]

[REDACTED]

SUMF63.

- c. **Limitation [13-b]: “acquiring first information on a motion of the electronic device using at least a part of the at least one first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the electronic device is worn on a part of the user’s body;”**

Each of the Domestic Industry Products acquires first information on a motion of the electronic device using at least a part of the first sensor for a second period of time shortly before and/or immediately after a first period of time when it is determined that the device is worn. During a “first period of time,” the Domestic Industry Products detect wear using a combination of [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

SUMF64.

- d. **Limitation [13-c]: “activating at least one second sensor based on at least a part of the first information on the motion of the electronic device;”**

Each of the Domestic Industry Products activates at least one second sensor based on at least a part of the first information on the motion of the electronic device. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

detailed for limitation [9-b] of the '677 Patent, the “second sensor” for measuring [REDACTED] is (1) a

[REDACTED]
[REDACTED]. SUMF51.

- e. Limitation [13-d]: “detecting a biometric information of the user using the activated at least one second sensor;”**

Each of the Domestic Industry Products detects biometric information of the user using the activated second sensor. Once [REDACTED]

[REDACTED] SUMF66.

- f. Limitation [13-e]: “during detecting the biometric information, acquiring second information on a motion of the electronic device using at least the part of the at least one first sensor;”**

During detecting the biometric information, each of the Domestic Industry Products acquires second information on a motion of the electronic device using at least a part of the first sensor. While the user is asleep and the [REDACTED]

[REDACTED]
[REDACTED]
[REDACTED]. SUMF67.

- g. Limitation [13-f]: “and in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivating the at least one second sensor.”**

In response to identifying that the motion of the electronic device included in the second information is [REDACTED] each of the Domestic Industry Products inactivates the second sensor. [REDACTED]

[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED] *Id.*

- [REDACTED]
2. **Dependent Claim 15: “The method of claim 13, further comprising: acquiring additional information on the motion of the electronic device using at least a part of the at least one first sensor for a third period of time, which is shorter than the first period of time, immediately after the second period of time passes; and activating the at least one second sensor based on at least a part of the additional information.”**

Each of the Domestic Industry Products practices Claim 15. In the context of Claim 15, the “first period of time” is the period during which a product monitors motion information to determine whether an unworn product has been worn on the user’s body, and the “second period of time” is the period during which it monitors motion information to determine whether to activate or inactivate a biometric sensor. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. SUMF69.

3. **Independent Claim 20**

- a. **Limitation [20-pre]: “An electronic device comprising:”**

To the extent the preamble is limiting, each of the Domestic Industry Products is an electronic device. The Galaxy Watch products are electronic smartwatches and the Galaxy Ring is an electronic smartring. SUMF70.

[REDACTED]

b. Limitation [20-a]: “at least one first sensor;”

Each of the Domestic Industry Products includes at least one first sensor— [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] See Limitation [13-a]; SUMF71.

c. Limitation [20-b]: “at least one second sensor;”

Each of the Domestic Industry Products includes at least one second sensor, specifically a biological sensor such as an SpO2 sensor. See Limitation [13-c]; SUMF72.

d. Limitation [20-c]: “a memory; and”

Each of the Domestic Industry Products includes a memory. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED].

SUMF73.

e. Limitation [20-d]: “at least one processor electrically connected to the at least one first sensor, the at least one second sensor, and the memory,”

Each of the Domestic Industry Products includes at least one processor electrically connected to the first sensor, the second sensor, and the memory. The electrical connections among the processor, sensors, and memory are depicted in [REDACTED]

[REDACTED]. SUMF74.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

- f. **Limitation [20-e]: “wherein the memory stores one or more computer programs including instructions which, when executed by the at least one processor, cause the at least one processor to: determine whether the electronic device is worn on a part of a user’s body,”**

The memory of each Domestic Industry Product stores one or more computer programs including instructions which, when executed by the processor, cause it to determine whether the electronic device is worn on a part of a user’s body. Each product stores software/firmware in its memory, and when the processor executes it, the product processes information acquired from its

[REDACTED]

See Limitation [13-a]; SUMF75.

- [REDACTED]
- g. Limitation [20-f]: “when the electronic device is worn on the part of the user’s body, determine a motion of the electronic device based on first information obtained by the at least one first sensor,”**

When the electronic device is worn, each of the Domestic Industry Products determines a motion of the electronic device based on first information obtained by the first sensor. [REDACTED]

[REDACTED]

[REDACTED] See Limitation [13-b]; SUMF76.

- h. Limitation [20-g]: “determine whether to identify biometric information based on the motion of the electronic device,”**

Each of the Domestic Industry Products determines whether to identify biometric information based on the motion of the electronic device. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. See Limitation [13-c]; SUMF77.

- i. Limitation [20-h]: “in response to determining to identify biometric information, identify the biometric information of the user through the at least one second sensor,”**

In response to determining to identify biometric information, each of the Domestic Industry Products identifies the biometric information of the user through the second sensor. See Limitation [13-d]; SUMF78.

- j. Limitation [20-i]: “during identifying the biometric information of the user, obtain second information on a motion of the electronic device using the at least one first sensor,”**

During identifying the biometric information of the user, each of the Domestic Industry Products obtains second information on a motion of the electronic device using the first sensor. See Limitation [13-e]; SUMF79.

[REDACTED]

- k. **Limitation [20-j]: “and in response to identifying that the motion of the electronic device included in the second information is more than a threshold motion, inactivate the at least one second sensor.”**

In response to identifying that the motion of the electronic device included in the second information [REDACTED] [REDACTED]

[REDACTED] *See* Limitation [13-f]; SUMF80.

V. CONCLUSION

For the reasons discussed above, Samsung respectfully requests summary determination that the Accused Products infringe Claims 1-4, 9, 11, and 16 of the '677 Patent and Claims 13, 15 and 20 of the '675 Patent, and the Accused DI Products practice Claims 9 and 16 of the '677 Patent and Claims 13, 15, and 20 of the '675 Patent; accordingly the domestic industry technical prong requirement is met as to those patents.

Dated: July 13, 2026
