Cypress PSoC® 6 Microcontrollers

Purpose-Built for the Internet of Things

WWW.CYPRESS.COM/PSOC6

INCREASING DEMANDS FOR THE INTERNET OF THINGS

The IoT is exploding, with more than 30 billion devices projected to be in service by 2020. At the heart of every IoT device lies a mixed-signal embedded system that is taking on an increased amount of data processing, fueled by cloud connectivity. Devices such as door locks, factory machinery, and wearables are becoming smart — sensing, connecting, learning and responding — to make life easier. With connectivity, security becomes critical to protect users from malicious activity. These next-generation IoT devices require increased processing and security without incurring power and cost penalties.

Increased Data Processing

Today's IoT devices are collecting and processing more data than ever. Even wearable devices can contain more than a dozen sensors, including biometric, environmental, and motion sensors. Sensor data is collected and processed in real-time requiring a processor capable of sensor aggregation.

Flexible Connectivity

IoT devices connect to the cloud via various wired and wireless protocols including USB, Bluetooth Low Energy (BLE), Wi-Fi, and LPWAN. Having the flexibility to connect via different connectivity options is essential.

Security

Security and privacy are significant IoT concerns. Users must be confident that their personal data is always protected while their IoT devices are connected to the Internet. Similarly, IoT developers must be able to ensure the authenticity of their products to eliminate counterfeits and perform secure over-the-air updates to keep their products current.

Extended Battery Life

From wearables to remote sensors, more and more IoT devices are running on batteries. Extending the time between battery charges is a key requirement for battery-powered IoT devices.

PSoC® 6 MICROCONTROLLERS

Purpose-Built for the Internet of Things

Cypress' PSoC 6 MCU architecture is purpose-built for the IoT, filling the gap between expensive, power-hungry applications processors and low-performance MCUs. The ultra-low power PSoC 6 MCU architecture offers the processing performance needed by IoT devices. Security is built-in, enabling a single-chip solution. PSoC 6 enables engineers to uniquely create innovative, next-generation IoT devices leveraging the unique PSoC fabric with its easy-to-use, software-defined peripherals.

LOWEST POWER

IoT devices are often portable, making battery life a critical factor. The PSoC 6 MCU architecture is built on a cutting-edge, ultra-low-power, 40-nm process technology with a dual Arm® Cortex®-M core architecture. Active power consumption is as low as 22-μA/MHz for the M4 core, and 15-μA/MHz for the M0+ core. PSoC 6 delivers extended battery life without sacrificing performance.

MOST FLEXIBILITY

The rapid growth of the IoT is sparking a need for innovation in IoT products. The PSoC 6 MCU architecture's best-in-class flexibility enables the addition of new features, and addresses the need for unique IoT products with multiple connectivity options, such as USB and BLE. PSoC 6 also offers software-defined peripherals to create custom analog and digital circuits, and the industry's best capacitive-sensing solution, CapSense®. In addition, a flexible dual-core architecture is used to optimize for system power consumption and performance. The possibilities are endless.

BUILT-IN SECURITY

With a growing number of devices connecting to the IoT, security must be established between hardware, cloud applications, and servers, and finally users and services. The PSoC 6 MCU architecture supports multiple, simultaneous secure environments without the need for external memories or secure elements, and offers scalable secure memory for multiple, independent user-defined security policies, preventing your IoT device from becoming a security liability. PSoC 6 provides you with a new standard for IoT security.

UNMATCHED SOLUTIONS FOR THE INTERNET OF THINGS

The Oura Ring

OURA

The Oura Ring is the world's most-advanced wearable that helps you achieve restorative sleep. This innovation is delivered through PSoC 6 MCUs, enabling the following features:

SMALL FORM FACTOR

Integration of several functions into a single PSoC 6 MCU helped reduce the size of the ring over the prior generation by 50%.

DATA STORAGE

PSoC 6's on-chip flash memory enables storage of up to six weeks of user data.

BLUETOOTH LOW ENERGY

The built-in BLE wireless connectivity in PSoC 6 provides communication to the mobile app device.

EXTENDED BATTERY LIFE

PSoC 6's ultra-low power was able to extend battery life to seven days, 3X longer than the prior generation ring.

SENSOR FUSION

PSoC 6, as the host processor, connects different biometric sensors in the ring to collect and process data.

DATA PROCESSING

The dual Cortex-M4 and Cortex-M0+ cores in PSoC 6 enabled 10X more processing capability vs. the prior-generation ring.

"The Oura ring required long-lasting battery life, increased processing capacity, and the use of advanced sensors, all in a stylish and comfortable form factor. Choosing Cypress as our partner helped us meet these requirements and redefine what is possible for wearable health products."

Petteri Lahtela
CEO and Co-founder at Oura Health

PSoC 6 DUAL-CORE MCU ARCHITECTURE

WEARABLE EXAMPLE

Modern wearables incorporate a growing number of functions and capabilities while maximizing battery life. Functions such as sleek user interfaces with sliders and proximity sensors, voice command support, seamless BLE connectivity, display driving, and process-intensive sensor aggregation can all be achieved in a single PSoC 6 MCU without sacrificing battery life.

KEY FEATURES

LOW POWER

PSoC 6 was designed for ultra-low power consumption. Starting with the dual-core architecture, the Cortex-M4 core can be put to sleep to conserve power, while monitoring functions can be managed by the Cortex-M0+ core. Dynamic voltage and frequency scaling can be controlled by the user to optimize power for different operating environments. With multiple sleep and hibernate modes, users can fine-tune their power profiles.

BUILT-IN SECURITY

PSoC 6 is designed to provide a hardware-based root of trust for secure applications. A hardware-based root of trust provides extra protection against unauthorized access to keys. In addition, hardware accelerated cryptography and true random-number generation are provided, which are needed for secure boot, authentication, secure over-the-air updates and other functions.

CONNECTIVITY

PSoC 6 supports multiple wired and wireless connectivity options including Bluetooth Low Energy, Wi-Fi, and USB.

CAPSENSE

PSoC 6 leverages Cypress' industry-leading CapSense solution for capacitive sensing with state-of-the-art noise immunity and water rejection used for applications including touch buttons and sliders, proximity detection and liquid-level sensing.

SOFTWARE-DEFINED PERIPHERALS

Cypress' software-defined peripherals can be configured using pre-built library functions or customized using the programmable architecture inside of PSoC 6 devices:

Programmable analog blocks are composed of an assortment of opamps, comparators, ADCs, and DACs, enabling complex analog signal flows.

Programmable digital blocks are composed of Universal Digital Blocks (UDBs), Serial Communication Blocks (SCBs), and Timer / Counter / Pulse Width Modulators (TCPWMs). These blocks can be configured to set-up custom digital interfaces, state machines, and custom logic functions.

VIDEO DOORBELL EXAMPLE

For a smart home application like a video doorbell, PSoC 6, with its dual Cortex-M4 and Cortex-M0+ cores, can transmit real-time video as well as incorporate proximity detection, capture and play audio, and interface to a Cypress fingerprint sensor module or Cypress WICED Wi-Fi chipset. The PSoC 6 MCU's ultra-low-power profile enables smart applications to run off batteries.

ACCELERATE YOUR NEXT IOT DESIGN CYCLE

ModusToolbox™ Software Environment

ModusToolbox simplifies development for IoT designers, delivering easy-to-use tools and a familiar IDE, with support for Windows®, macOS®, and Linux. It provides a powerful suite of tools for system and peripheral set-up. Code examples, documentation, RTOS and Cloud service support, and technical support forums are available to help your IoT development process along.

Graphical Configuration Tools:

GUI-based configuration tools used to configure peripherals such as Smart I/O, CapSense, and wireless connectivity to quickly design and develop IoT systems.

PSoC 6 MCU Peripherals Configurator

PSoC 6 DEVELOPMENT KITS

Cypress offers award winning development kits along with hundreds of code examples allowing you to evaluate, prototype and debug designs with PSoC 6. The PSoC 6 development kits are pin-compatible with various 3rd party expansion boards including Arduino™ shield boards and Digilent® Pmod™ daughter cards.

PSOC 6 WI-FI BT PROTOTYPING KIT
(CY8CPROTO-062-4343W)

PSOC 6 BLE PROTOTYPING KIT
(CY8CPROTO-063-BLE)

Analog Devices Completes Acquisition of Maxim Integrated

August 26, 2021 at 9:00 AM EDT

WILMINGTON, Mass.--(BUSINESS WIRE)--Aug. 26, 2021-- Analog Devices, Inc. (NASDAQ: ADI) today announced the completion of its previously announced acquisition of Maxim Integrated Products, Inc. (NASDAQ: MXIM). The combination further strengthens ADI's position as a high-performance analog semiconductor company with trailing twelve-month revenue of over \$9 billion¹, industry leading margins, and free cash flow of over \$3 billion¹ on a pro forma basis.

"Today is a tremendous milestone for ADI and I'm delighted to welcome the Maxim team, who share our passion for solving our customers' most complex technology problems," said Vincent Roche, President and CEO. "With more than 10,000 engineers and the increased breadth and depth of our best-in-class technologies, we are well-positioned to develop even more complete, cutting-edge solutions for our customers. Together, we will drive the next waves of analog semiconductor innovation, while engineering a healthier, safer and more sustainable future for all."

Under the terms of the definitive agreement, Maxim stockholders received 0.63 of a share of ADI common stock for each share of Maxim common stock. Maxim common stock will no longer be listed for trading on the NASDAQ stock market.

Combined Board of Directors

In connection with the closing of the transaction, Tunç Doluca, former President and Chief Executive Officer of Maxim, and Mercedes Johnson, former Founding Executive of Avago Technologies, will join the ADI Board of Directors. Mr. Doluca and Ms. Johnson served on Maxim's Board of Directors until the closing of the transaction.

Special Investor Conference Call and Webcast

ADI plans to host a webcast to discuss its upcoming capital allocation priorities and the updated fourth quarter fiscal 2021 outlook. The webcast is scheduled to begin at approximately 8:30 a.m. Eastern Time on September 8th, 2021 with Vincent Roche, President and Chief Executive Officer, Prashanth Mahendra-Rajah, Senior Vice President, Finance and Chief Financial Officer, and Michael Lucarelli, Senior Director of Investor Relations.

The webcast and accompanying presentation may be accessed live on the internet on Analog Devices' Investor Relations website at investor.analog.com, or by telephone as follows:

Participant Dial-In (domestic & international): (833) 423-0297

International Participant Passcode: 8334230297

**no passcode required for domestic dial-in*

A replay of the conference call will be available approximately two hours after the call concludes and may be accessed for up to two weeks, by dialing 855-859-2056 and entering the conference ID: 7115409.

Both the press release and archived version of the webcast will be available at investor.analog.com.

About Analog Devices

Analog Devices, Inc. (NASDAQ: ADI) operates at the center of the modern digital economy, converting real-world phenomena into actionable insight with its comprehensive suite of analog and mixed signal, power management, radio frequency (RF), and digital and sensor technologies. ADI serves 125,000 customers worldwide with more than 75,000 products in the industrial, communications, automotive, and consumer markets. ADI is headquartered in Wilmington, MA. Visit <http://www.analog.com>.

Forward-Looking Statements

This communication contains "forward-looking statements" within the meaning of the federal securities laws. Forward-looking statements address a variety of subjects, including, for example, statements as to the anticipated benefits of the transaction, the anticipated impact of the transaction on the combined organization's business and future financial and operating results, and the expected amount and timing of synergies from the transaction. Statements that are not historical facts, including statements about ADI's beliefs, plans and expectations, are forward-looking statements. Such statements are based on ADI's current expectations and are subject to a number of factors and uncertainties, which could cause actual results to differ materially from those described in the forward-looking statements. Forward-looking statements often contain words such as "expect," "anticipate," "intend," "plan," "believe," "will," "estimate," "would," "target" and similar expressions, as well as variations or negatives of these words. The following important factors and uncertainties, among others, could cause actual results to differ materially from those described in these forward-looking statements: the uncertainty as to the extent of the duration, scope and impacts of the COVID-19 pandemic; political and economic uncertainty, including any faltering in global economic conditions or the stability of credit and financial markets; erosion of consumer confidence and declines in customer spending; unavailability of raw materials, services, supplies or manufacturing capacity; changes in geographic scope or product or customer mix; changes in export classifications, import and export regulations or duties and tariffs; changes in ADI's estimate of its expected tax rate based on

current tax law; ADI's ability to successfully integrate Maxim's businesses and technologies; the risk that the expected benefits and synergies of the transaction and growth prospects of the combined company may not be fully achieved in a timely manner, or at all; adverse results in litigation matters, including the potential for litigation related to the transaction; the risk that ADI will be unable to retain and hire key personnel; unanticipated difficulties or expenditures relating to the transaction, the response of business partners and retention as a result of the transaction; uncertainty as to the long-term value of ADI's common stock; and the diversion of management time on transaction-related matters. For additional information about other factors that could cause actual results to differ materially from those described in the forward-looking statements, please refer to ADI's and Maxim's respective periodic reports and other filings with the Securities and Exchange Commission, including the risk factors contained in ADI's and Maxim's most recent Quarterly Reports on Form 10-Q and Annual Reports on Form 10-K. Forward-looking statements represent management's current expectations and are inherently uncertain and are made only as of the date hereof. Except as required by law, ADI does not undertake or assume any obligation to update any forward-looking statements, whether as a result of new information or to reflect subsequent events or circumstances or otherwise.

(ADI-WEB)

¹ Based on trailing twelve months ending July 31, 2021 for Analog Devices and trailing twelve months ending June 26, 2021 for Maxim. Free cash flow is defined as net cash provided by operating activities, determined in accordance with GAAP, less additions to property, plant and equipment, net.
