

**UNITED STATES INTERNATIONAL TRADE COMMISSION
WASHINGTON, D.C.**

**Before the Honorable Doris Johnson Hines
Administrative Law Judge**

In the Matter of:

CERTAIN WEARABLE DEVICES

Investigation No. 337-TA-1478

**RESPONDENTS OURARING INC. AND OURA HEALTH OY'S REPLY IN SUPPORT
OF THEIR MOTION FOR SUMMARY DETERMINATION OF NON-INFRINGEMENT
BY OURA'S ALTERNATIVE PRODUCTS**

(EDIS Doc. ID 887851) (Motion No. 1478-007)

² Ex. 100 (OURA1468_000255354) was identified by Bates number and excerpted in Oura's motion, but inadvertently not previously attached as an exhibit. *See* Mot. at 31-32.

“Facts do not cease to exist because they are ignored” (Aldous Huxley). Yet Samsung’s opposition asks this Court to do just that: ignore that Samsung was on notice of the [REDACTED] [REDACTED] since April, ignore that Oura provided significant discovery on the two rings, ignore that Oura provided witnesses to testify on the two rings, ignore that Oura identified both rings as accused products in response to interrogatories, ignore that Samsung’s *own* counsel identified both [REDACTED] rings as “Accused Products” during depositions, ignore that Samsung was informed of the release date for both products and provided their technical documents, and ignore that Oura contended that both rings would not infringe the asserted patents.

It appears that Samsung made a calculated decision to ignore discovery and not take a position on infringement in the hope that the rings would not be adjudicated. The upside for Samsung would be simple: it would get the benefit of covering the Oura Ring 5 [REDACTED] by any remedial order without ever having to accuse or put forth evidence of infringement against either ring. But the Commission has previously disparaged such an approach. *Certain Electronic Digital Media Devices and Components Thereof*, Inv. No. 337-TA-796, Comm’n Op. at 105 (Sept. 6, 2013) (“[complainant] did not seem to want the design around products adjudicated, but still wanted to be able to argue that they fall within the scope of any exclusion order that may issue.”). Thus, the Commission encourages redesigns and alternative products to be adjudicated.

Ultimately, application of the *Oligosaccharides* factors leaves no doubt that Oura Ring 5 [REDACTED] are eligible for adjudication, and there is also no cause to “preclude” consideration of such products. Because the products are eligible for adjudication and Samsung cannot carry its burden of proof with regard to infringement, summary determination of should be granted.

I. THE OURA RING 5 [REDACTED] HAVE MET THE OLIGOSACCHARIDES TEST FOR ADJUDICATION

Both Oura Ring 5 [REDACTED] have met the test for adjudication under the

Oligosaccharides factors.³ Samsung repeatedly argues that neither Oura Ring 5 [REDACTED] are “redesigned” products *per se* (rather, they are alternative products). *See* Opp. at 1, 4, 8-9, 16. This is true because [REDACTED]

[REDACTED] *See Certain Outdoor and Semi-Outdoor Electronic Displays*, Inv. No. 337-TA-1331, ID at 4-5 (June 20, 2023) (EDIS Doc. ID 804206) (“[T]he *Oligosaccharides* framework is not limited to ‘redesigns,’ and Complainant identifies no meaningful difference between a redesigned product and an alternative non-accused product”). Samsung does not contest factor 1 (*see* Opp. at 12 n. 3), and the case record demonstrates that there is no genuine issue of material fact that would prevent summary determination with respect to the remaining factors.

A. The Oura Ring 5 [REDACTED] Have Been Imported

The parties have stipulated to importation of Oura Ring 5 [REDACTED]. *See* Ex. 35 at Exhibit A. And while Samsung now argues that this stipulation was somehow one-sided (*see* Opp. at 13), this exact form of stipulation has been found to support importation. *See Certain Photovoltaic Connectors and Components Thereof*, Inv. No. 337-TA-1365, ID at 27 (Aug. 30, 2024) (EDIS Doc. ID 832409) (“Voltage stipulates that it has imported...”). Samsung also did not dispute the importation stipulation proposal during fact discovery when Oura could have provided evidence if needed, despite the proposal being made nine days before the close of fact discovery. Ex. 69.

Oura also made physical samples of Oura Ring 5 [REDACTED] available to Samsung on

³ Samsung’s own MSD of infringement on these products appears to admit they can be fairly adjudicated. *Compare* Samsung MSD (Motion No. 1478-009) at 2 (“The Accused Products include the Oura Ring 4 and all Oura ring products with materially similar hardware functionality and firmware architecture, [REDACTED]”) with Samsung’s Opp. at 1 (“[REDACTED]”). Both positions cannot be true.

March 31, 2026. *See* Ex. 12. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] Any questions Samsung has about the origin of the Oura Ring 5 [REDACTED] and its professed confusion by entirely correct testimony about future plans, is a result of its own failure to investigate.⁴

B. The Oura Ring 5 [REDACTED] Are Sufficiently Fixed in Design

Samsung does not dispute that physical Oura Ring 5 [REDACTED] were made available on March 31, 2026. *See* Ex. 12; *see also Certain Audio Players and Controllers*, Inv. No. 337-TA-1191, Order No. 19 at 4 (Sept. 17, 2020) (EDIS Doc. ID 719871) (providing “physical devices” shows fixedness of design). Samsung does not dispute that it sought testimony about the PCB features of both Oura Ring 5 [REDACTED] (*i.e.*, the features most relevant to the ’789 Patent) on March 20 (Ex. 13 at 65:10-72:10, 150:8-15) and March 25, 2026 (Ex. 60 at 153:11-25, 165:8-10). Samsung does not dispute Oura’s detailed documentation for Oura Ring 5 [REDACTED] produced on March 17 that included Ex. 37 ([REDACTED]), Ex. 38 [REDACTED], [REDACTED], and Ex. 39 ([REDACTED]). [REDACTED]

[REDACTED]

[REDACTED]

⁴ Samsung also claims that Oura Ring 5 [REDACTED] have not been imported as of its self-imposed date of May 13, 2026. *See* Opp. at 14. While evidence of importation (*i.e.*, produced samples themselves) was provided well before May 13, this is also the wrong date for this inquiry. In *Oligosaccharides*, importation was satisfied despite the redesigned product being first identified as having been imported on the final day of fact discovery. *See* Comm’n Op. at 15, 20.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Samsung also appears to confuse the Commission’s standard of “sufficiently fixed for adjudication” with an improper “commercially available” benchmark. *Certain Photovoltaic Trunk Bus Cable Assemblies and Components Thereof*, Inv. No. 337-TA-1438, ID at 105-06 (Feb. 6, 2026) (EDIS Doc. ID 873421). Even the need for “further development” before commercial release does not necessarily make a product insufficiently fixed for adjudication. *Certain Photovoltaic Connectors and Components Thereof*, ID at 31 n. 14. It is against this standard that Mr. Chapp’s testimony must be applied. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

C. *Sufficient Discovery Has Been Provided*

Samsung argues that “Oura additionally failed to produce (and still has not produced) the most important technical discovery that Samsung needed to actually assess infringement—physical samples of the Ring 5 [REDACTED] for Samsung to teardown.” Opp. at 16. Not so—Oura produced physical samples, which were available to tear down even if Samsung never requested to do so, on March 31. Samsung’s expert supplied a different explanation for why Samsung did not tear down Oura’s samples: “[REDACTED]

[REDACTED].” See Ex. 40 at 41:8-10. This echoes

⁵ Samsung is flatly wrong when it argues that “[REDACTED].” See Opp. at 15. Oura has said no such thing, nor has Mr. Vincent. See Ex. 21 at 63:18-64:13. [REDACTED]

[REDACTED]

Samsung's argument that "[REDACTED]" (Opp. at 16)—but *Oura made these samples available*. There is no requirement of commercial availability. *See Certain Portable Battery Jump Starters*, Inv. No. 337-TA-1359, ID at 34-35 (July 5, 2024) (further noting that the products being "made available for inspection" weighs in favor of sufficient discovery).

Samsung does not dispute that even before its final infringement contentions were due it received over 200 technical documents, [REDACTED]

[REDACTED]

[REDACTED] *See* Motion at 3-9. "If [Samsung] and its expert deemed such evidence to be insufficient, [Samsung] could and should have taken available procedural steps, such as a motion to reopen discovery or compel further discovery, because the burden of establishing infringement remains with [Samsung.]" *Oligosaccharides*, Inv. No. 337-TA-1120, Comm'n Op. at 23 (June 8, 2020) (EDIS Doc. ID 712205).

As to Samsung's repeated complaints about a supposed insufficiency of noninfringement contentions and "fair notice," *Oura* was not under an obligation to put forth any noninfringement positions prior to Samsung setting forth an infringement theory, much less complete theories of noninfringement. *See Certain Audio Players and Controllers*, Inv. No. 337-TA-1191, Order No. 19 at 2-4 (finding that sufficient disclosure occurred based on identification of products and relevant evidence, despite an argument that "the redesigns have not been sufficiently disclosed because Google has not provided a response to Interrogatory No. 21 as to how the alleged redesigns are non-infringing"); *see also Certain Electrical Connectors and Cages*, Inv. No. 337-TA-1241, ID at 38 (March 11, 2022) (EDIS Doc. ID 767918) (focusing on the timing of the identification of

[REDACTED]

products and their features, without any requirement for noninfringement contentions). The applicable burden-shifting framework is discussed in greater detail in the context of Samsung's arguments to preclude, *infra* at Section III.B.

At bottom, Oura identified Oura Ring 5 [REDACTED] in April as products for which it would seek adjudication, and no discovery was denied to Samsung. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]. No discovery was withheld from or denied to Samsung, and even Samsung's expert professed to being able to form an infringement opinion based on the produced discovery in his inappropriate redirect deposition testimony. *See* Ex. 40 at 206:22-207:4.

II. SUMMARY DETERMINATION OF NO INFRINGEMENT OF THE '789 PATENT BY THE OURA RING 5 [REDACTED] SHOULD BE GRANTED

Given that Oura has met its burden to show that the Oura Ring 5 [REDACTED] are eligible for adjudication, the burden flips to Samsung to prove infringement. *See Oligosaccharides*, Comm'n Op. at 23. Samsung cannot carry this burden, and accordingly summary determination of

noninfringement by the Oura Ring 5 and Bentley rings is warranted.

A. Samsung Does Not Contend that it Can Carry its Burden of Proof

Samsung's Opposition does not even contend that it can show infringement of the '789 Patent by Oura Ring 5 [REDACTED] and indeed, without expert support, it cannot. *See generally*, Opp. at 19-21 (not setting forth any basis for infringement, and instead requesting "further fact and expert discovery before the merits of infringement are adjudicated"). Indeed, summary determination should be granted even if Dr. Mortazavi's opinions were excluded. This is because merely pointing out flaws in a noninfringement opinion (or even negating it entirely) is not enough. *See Certain Outdoor and Semi-Outdoor Electronic Displays*, Inv. No. 337-TA-1331, ID at 13-14. Illustrating this point of law, in *Covered Wall Plates*, summary determination of noninfringement was granted despite the respondents not putting forth any expert report at all on noninfringement. *See* Inv. No. 337-TA-1124, Corrected MIL at 6 (Feb. 6, 2019) (EDIS Doc. ID 667049) (establishing respondent's expert did not address redesigns); Inv. No. 337-TA-1124, Teleconference Tr. at 7:15-9:14 (March 29, 2019) (EDIS Doc. ID 672852) (granting summary determination of noninfringement by noting burden of proof).

B. Discovery Should Not be Reopened for a Do-Over

Samsung's last-ditch attempt to redo discovery so that it can conduct "further fact and expert discovery" would wreak havoc on the schedule, create an incentive for future complainants to lie in wait with infringement theories, and is without precedent in Commission proceedings; indeed, in the only investigation Oura has found to have considered such a request, the ALJ rejected it. *See Certain Powered Cover Plates*, Inv. No. 337-TA-1124, Corrected MIL at 2 (requesting "in the alternative" leave to assert new infringement theories against redesigned products); Inv. No. 337-TA-1124, Teleconference Tr. at 10:1-21 (denying MIL).

The circumstances of the cases cited by Samsung are readily distinguished. In *Certain*

[REDACTED]

Formatted Magnetic Data Storage Tapes, the untimely rebuttal opinions concerned an issue (secondary considerations) for which the patentee bore an initial burden of production; here Oura bore no such initial burden to set forth noninfringement contentions before infringement contentions. *See* Inv. No. 337-TA-931, Order No. 16, at *3-4 (Apr. 29, 2015). In *Certain Network Devices*, complainant’s expert had addressed infringement in his initial report and both parties had already served supplemental expert reports, so there was no disruption to the schedule. *See* Inv. No. 337-TA-945, Order No. 43 at 12 (Nov. 3, 2015) (EDIS Doc. ID 569594). And in *Certain Mobile Telephones*, the late-produced discovery had been requested by the complainants and withheld by respondents, whereas Oura has withheld no requested discovery. *See* Inv. No. 337-TA-1299, Order No. 24 at 2, 5 (Nov. 29, 2022) (EDIS Doc. ID 786254).

III. SAMSUNG’S EFFORTS TO PRECLUDE OURA FROM RAISING OURA RING 5 [REDACTED] ARGUMENTS ALSO FAIL

A. Samsung’s Opposition Sets Forth the Wrong Procedural Framework

Potentially because of the ALJ’s recent decision in Inv. No. 337-TA-1468 (*see* Order No. 17 (Apr. 30, 2026) (EDIS Doc. ID 881886)), Samsung’s Opposition also seeks to preclude Oura from advancing its theories regarding Oura Ring 5 [REDACTED]. *See* Opp. at 6-11. But the inquiries are different. The ALJ’s prior order focused, in part, on whether there had been seasonable amendment of interrogatory responses in response to specific requests regarding redesigns, which was entirely appropriate for a motion to strike late discovery. But this is not the procedural posture of Oura’s motion. Samsung has not actually filed a motion, but rather seeks this relief in the context of opposing summary determination well after Dr. Mortazavi’s expert report was served.

Furthermore, it is unclear exactly what Samsung seeks to preclude. In some instances, Samsung broadly refers to “theories” (Opp. at 6, 8), in other instances it seems to clarify that its request that “the noninfringement arguments presented by Oura through the rebuttal expert report

of Dr. Mortazavi must be excluded” (*id.* at 11). The application of the *Oligosaccharides* factors, addressed above, is the only proper framework to address whether redesigned or alternative products are eligible for adjudication; the Commission has endorsed no other framework.

B. Samsung’s Request to Preclude is not Justified

Even if Samsung’s request were procedurally proper, Samsung has offered no basis to strike the thousands of pages of discovery Oura provided on Oura Ring 5 [REDACTED] and Oura’s contentions explicitly named them as noninfringing products before Samsung’s final contentions were due. Samsung’s recitation of the record is not accurate: For example, it argues that “Oura’s discovery responses and contentions also never disclosed or presented Ring 5 [REDACTED] as alleged redesigns or non-infringing alternatives.” Opp. at 1. This is blatantly not the case, given Oura’s interrogatory responses, *inter alia*, identifying Oura Ring 5 [REDACTED] and stating that they do not infringe (Ex. 15 at 13, 15, 79), identifying further relevant documents (Ex. 19 at 13), and then noting Samsung’s failure of proof (Ex. 20 at 82-84). Samsung’s own counsel identified Cooper [REDACTED] as accused products in deposition. Ex. 24 at 11:22-12:10. And while Samsung argues that Oura somehow disclaimed that Oura Ring 5 [REDACTED] were fixed in design or imported, no such disclaimers occurred and Samsung ignores considerable evidence in the record to the contrary. *See, e.g.*, Ex. 13 at 61:10-15, 64:25-65:3; Ex. 21 at 63:18-64:13.

Samsung’s claim that it could not be expected to provide infringement positions without seeing Oura’s noninfringement positions puts the discovery burdens backwards. Oura bore the burden to produce discovery and identify products for adjudication, which it did, but it was not under an obligation to put forth any noninfringement positions prior to Samsung setting forth an infringement theory, much less complete theories of noninfringement. *See Certain Audio Players and Controllers*, Order No. 19 at 2-4; *see also Certain Electrical Connectors and Cages*, ID at 38. Thus, while Oura contended in April that [REDACTED] do not infringe “for at least the same

reasons as set forth in [an earlier response]” (Ex. 15 at 79), this was not a limiting contention, nor was it a concession that the Oura Gen. 4 was fully representative of these products; as reflected by the procedural schedule, a party with the burden on an issue puts forth contentions first. Nor was there any requirement for Oura to set forth any legal analysis of the *Oligosaccharides* factors in its contentions, and Oura cannot locate any proceeding in which this was done, much less required; Samsung cites nothing for its repeated argument that such an analysis was required. *See* Opp. at 4, 10, 11. Samsung never alleged that the information provided to it was deficient, nor did it raise any concerns with Oura’s interrogatory responses starting in April. Preclusion is not warranted.

C. Even if Dr. Mortazavi’s Noninfringement Opinions were to be Precluded, Summary Determination of Noninfringement would be Appropriate

If what Samsung specifically seeks to preclude is “the noninfringement arguments presented by Oura through the rebuttal expert report of Dr. Mortazavi” (*see* Opp. at 11), which is Samsung’s only concretely-defined request, summary determination of noninfringement by Oura Ring 5 [REDACTED] would still be proper. This is because, as established above, once a respondent puts forth a redesigned or alternative product in satisfaction of the *Oligosaccharides* factors—which Oura satisfies without any opinion from Dr. Mortazavi—the burden to prove infringement shifts to the complainant, and even Samsung does not allege that it can now carry this burden of proof (addressed *supra*, Section II.A). Thus, although preclusion is not warranted, summary determination would be appropriate even if Dr. Mortazavi’s opinions were not considered.

IV. CONCLUSION

For reasons set forth above, Oura respectfully requests that the ALJ find that Oura Ring 5 [REDACTED] should be adjudicated and grant summary determination of noninfringement of the ’789 Patent. Samsung has failed to put forth evidence sufficient to establish infringement by Oura Ring 5 [REDACTED] despite having notice that the products were at issue in this investigation.
