EXHIBIT 49

GlobalFoundries has made significant investments in the United States with respect to articles made by GlobalFoundries processes that are protected by the asserted patents. The GlobalFoundries processes covered by the asserted patents are at least the following:

Asserted Patent	Covered GlobalFoundries Process
8,330,235	130CBIC
8,507,983	CMHV7SF
9,093,425	130CBIC
9,865,546	130CBIC
10,062,748	CSOI8SW
10,707,167	130CBIC

Products made by GlobalFoundries' 130CBIC and CMHV7SF processes are made in the company's Burlington, Vermont fabrication facilities. The 130CBIC and CMHV7SF processes in Burlington, and the CSOI8SW process in Singapore, are mature and fully operating processes fabricating chips in commercial volumes.

130CBIC Process

GlobalFoundries invests heavily in U.S. research, product development, and engineering for the 130CBIC process, with approximately [REDACTED] in such investments

made in 2023, [REDACTED] in 2024, and [REDACTED] in 2025. GlobalFoundries has also invested approximately [REDACTED] in wafer costs, equipment, and labor towards building the 130CBIC process in Burlington in 2025. Wafer, equipment, and labor investments for the 130CBIC process in Burlington are expected to rise to approximately [REDACTED] in 2026, and approximately [REDACTED] in 2027, as the 130CBIC process continues to ramp up.

CMHV7SF Process

GlobalFoundries invested approximately [REDACTED] in wafer costs, equipment, and labor in the fabrication of chips using the CMHV7SF process in Burlington between 2024 and 2025. GlobalFoundries also invested approximately [REDACTED] in U.S. research, product development, and engineering for the CMHV7SF process in 2024, with approximately [REDACTED] in such investments made in 2025. GlobalFoundries also invested approximately [REDACTED] in U.S. sales and marketing activities (including labor and equipment) and administrative costs attributable to the CMHV7SF process in between 2024 and 2025.

CSOI9SW Process

While the CSOI9SW process is used in to make products in GlobalFoundries' Singapore fabrication facility, GlobalFoundries has invested heavily in U.S. sales and marketing activities (including labor and equipment) and administrative costs attributable to the CMHV7SF process as follows:

2023: Approximately [REDACTED]

2024: Approximately [REDACTED]

2025: Approximately [REDACTED]
