

Exhibit 3

Representative Product that Infringes Leggett & Platt's U.S. Patent No. 8,398,165

Barcalounger / Living Style Powered Rocker-Recliner with Carya Smart 5115 Mechanism

The following chart illustrates how the Barcalounger / Living Style Powered Rocker-Recliner (the “Representative Rocker” and/or “Living Style Barcalounger”) containing the Carya Smart 5115 Mechanism (the “Representative Rocker Mechanism”) infringes claims 1-7 and 15-18 of U.S. Patent No. 8,398,165. The Representative Rocker and/or Representative Rocker Mechanism are representative products only and illustrate infringement of the imported and accused products. The following chart contains highlighting, color-coding, and other annotations which are intended to assist the reader in identifying relevant elements, and are not intended to be binding or limiting. Complainants reserve the right to modify the structures associated with identified elements, to identify other functions for identified structures, and/or to adjust the identification of one or more components identified herein.

Complainants’ investigation of the extent of infringement is ongoing, and the following chart is based on publicly available information known to Complainants. Complainants reserve the right to offer additional evidence to prove infringement in their expert reports, and in motions and at trial. Complainants reserve the right to supplement, amend, or modify the foregoing based on new information that becomes available during discovery, the exchange of proposed claim constructions, and/or issuance of a claim construction order.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
1[p]	1. A seating unit having, a seat, a backrest, and at least one foot-support ottoman, the seating unit being adapted to move between a closed, an extended and a reclined position, the seating unit comprising:	The Living Style Barcalounger is a seating unit.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The image shows a detailed product label for a Living Style (Vietnam) LTD. The label is divided into several sections: Top Left: A warning: "UNDER PENALTY OF LAW THIS TAG NOT TO BE REMOVED EXCEPT BY THE CONSUMER". Top Center: "ALL NEW MATERIAL CONSISTING OF BODY" followed by a list: "POLYURETHANE FOAM PAD.....54%", "POLYESTER FIBER.....35%", and "POLYESTER FIBER BATTING11 %". Top Right: A "NOTICE" section stating: "THIS ARTICLE MEETS THE FLAMMABILITY REQUIREMENTS OF CALIFORNIA BUREAU OF HOUSEHOLD GOODS AND SERVICES TECHNICAL BULLETIN 117-2013. CARE SHOULD BE EXERCISED NEAR OPEN FLAME OR WITH BURNING CIGARETTES." Below this, it says: "The upholstery materials in this product: contain added flame retardant chemicals. X contain NO added flame retardant chemicals. The State of California has updated the flammability standard and determined that the fire safety requirements for this product can be met without adding flame retardant chemicals. The state has identified many flame retardant chemicals as being known to, or strongly suspected of, adversely impacting human health or development." Middle Left: "REG. NO. PA.42351(VN)" and "Certification is made by the manufacturer that the materials in this article are described in accordance with law." Below that, "MADE BY LIVING STYLE (VIETNAM) LTD 1ST&2ND FLOOR RIVER GARDEN 170 NGUYEN VAN HUONG HO CHI MINH HO CHI MINH VIETNAM 71300-0". It also lists "Date of delivery: 2024-10", "Finished size:", "Net weight of filling mat:", "Federal RN#:", and "Federal Textile Information MADE IN VIETNAM". Middle Right: A box stating "COMPLIES WITH U.S. CPSC REQUIREMENTS FOR UPHOLSTERED FURNITURE FLAMMABILITY". Bottom Left: A box with "ITEM NO.: 2376-90928-79" and "LOT: 1190-2024-10". Bottom: Three warning sections in English, French, and Spanish. The English warning states: "WARNING: This product can expose you to chemicals including Formaldehyde (gas) to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov/furniture."
		The Living Style Barcalounger comprises a Carya Smart 5115 mechanism.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The Living Style Barcalounger has a seat, a backrest, and at least one foot-support ottoman as shown in the images below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 A photograph of a brown leather armchair with a yellow oval highlighting the seat area. The chair is set against a red background. The seat area is the focus of the patent claim.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 A photograph of a brown leather recliner chair. A yellow circle is drawn around the backrest area, highlighting the upper portion of the chair's back. The chair is positioned against a red wall and sits on a light-colored carpet. The recliner has a control panel on the side of the base.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The Living Style Barcalounger is adapted to move between a closed, an extended and a reclined position as highlighted in the images below. CLOSED  EXTENDED  RECLINED 

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
1[a]	a pair of base plates in substantially parallel-spaced relation;	The Living Style Barcalounger includes a pair of base plates in substantially parallel-spaced relation as shown below.  The photograph shows the internal metal frame of a Barcalounger chair. Two horizontal metal bars, which serve as the base plates, are highlighted with yellow ovals. These bars are positioned in a substantially parallel-spaced relation. The frame also includes various other components such as a central support structure, a reclining mechanism, and a footrest assembly. The chair is upholstered in dark fabric, and the background is a solid orange wall.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
1[b]	a pair of rocker mechanisms, wherein each of the rocker mechanisms is attached to a respective base plate and moveably supports the respective base plate above an underlying surface;	The Living Style Barcalounger includes a pair of rocker mechanisms, wherein each of the rocker mechanisms is attached to a respective base plate and moveably supports the respective base plate above an underlying surface as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
1[c]	a pair of seat-mounting plates in substantially parallel-spaced relation, wherein the seat-mounting plates translatably carry the seat over the rocker mechanisms; and	The Living Style Barcalounger includes a pair of seat-mounting plates in substantially parallel-spaced relation, wherein the seat-mounting plates translatably carry the seat over the rocker mechanisms as shown below. The seat-mounting plates (pink) translatably carry the seat by attaching to the seat and permitting the seat to rock via the rocker mechanisms.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The photograph shows a mechanical assembly, likely a vehicle's suspension or steering component, featuring a black metal rocker arm and a spring mechanism. A red line is drawn across the image, highlighting a specific part of the mechanism, possibly a pivot point or a linkage. The assembly is mounted on a metal frame, and a spring is visible in the background.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
1[d]	a pair of the generally mirror-image linkage mechanisms each moveably	The Living Style Barcalounger includes a pair of the generally mirror-image linkage mechanisms (circled) each moveably interconnecting each of the base plates (yellow) to a respective seat-mounting plate (pink) as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	interconnecting each of the base plates to a respective seat-mounting plate, wherein each of the linkage mechanisms comprise:	 The photograph shows the internal mechanical structure of a seat's rocker mechanism. Two red ovals are drawn over the image to highlight specific parts. The upper oval encircles a horizontal metal bar with several circular components, likely rollers or guides, which are part of the upper linkage mechanism. The lower oval encircles a similar horizontal bar and associated components at the base of the mechanism. The background is a solid orange color.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The image shows a mechanical linkage mechanism for a footrest, likely from a recliner chair. It consists of two main assemblies, one above the other, both outlined in pink. Each assembly has a yellow line tracing a path through its internal components. The entire mechanism is enclosed within two large red circles. The mechanism is mounted on a dark metal frame with four legs. The background is a light-colored wall with a wooden baseboard.
1[d-a]	(a) a footrest assembly that extends and retracts the at least one foot-support ottoman, wherein the	The Living Style Barcalounger linkage mechanisms include a footrest assembly that extends and retracts the at least one foot-support ottoman, wherein the footrest assembly includes a front ottoman link that is rotatably coupled to a forward portion of one of the seat-mounting plates as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	footrest assembly includes a front ottoman link that is rotatably coupled to a forward portion of one of the seat-mounting plates; and	 SEAT-MOUNTING PLATE FRONT OTTOMAN LINK FOOTREST ASSEMBLY FOOT SUPPORT OTTOMAN

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
1[d-b]	(b) a seat-adjustment assembly that reclines and inclines the backrest; and	The Living Style Barcalounger linkage mechanisms include a seat-adjustment assembly that reclines and inclines the backrest as shown below. 
1[e]	a front motor tube that spans the pair of linkage mechanisms, wherein the front motor tube having a pair of ends, wherein one of the ends of the front motor	The Living Style Barcalounger includes a front motor tube that spans the pair of linkage mechanisms, wherein the front motor tube having a pair of ends, wherein one of the ends of the front motor tube is coupled to the front ottoman link as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	tube is coupled to the front ottoman link;	

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
1[f]	a linear actuator that provides automated adjustment of the seating unit between a closed position, an extended position, and a reclined position, wherein the linear actuator is coupled to the front motor tube,	The Living Style Barcalounger includes a linear actuator that provides automated adjustment of the seating unit between a closed position, an extended position, and a reclined position, wherein the linear actuator is coupled to the front motor tube as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The image shows the internal mechanical structure of a reclining chair, specifically the rocker mechanism. A yellow oval highlights the central pivot point where the rocker arm is attached to the frame. The mechanism includes various metal components, including a central pivot, a horizontal bar, and a vertical support. A label with technical specifications is visible on the right side of the mechanism. The entire assembly is mounted on a dark-colored frame.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The photos below depict the three positions between which the Living Style Barcalounger may be moved by the linear actuator.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism		
		CLOSED 	EXTENDED 	RECLINED 
1[g]	wherein the linear-actuator adjustment is sequenced into a first phase and a second phase that are mutually exclusive in stroke,	The Living Style Barcalounger linear actuator adjustment is sequenced into a first phase and a second phase that are mutually exclusive in stroke as shown below.		

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The first phase of the linear-actuator adjustment causes the motor mechanism to move forward until the footrest assembly is fully extended.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 When the linear actuator is activated, the first phase extends the footrest assembly until it is fully extended. The linear actuator then causes the second phase to actuate to the reclined position, which is exclusive of the first phase.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
1[h]	wherein the first phase moves the footrest assembly between the closed position and the extended position upon the linear actuator exerting lateral thrust onto the front motor tube that, in	The Living Style Barcalounger first phase moves the footrest assembly between the closed position and the extended position upon the linear actuator exerting lateral thrust onto the front motor tube that, in turn, invokes movement of the front ottoman link as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	turn, invokes movement of the front ottoman link,	 FRONT OTTOMAN LINK FRONT MOTOR TUBE FRONT OTTOMAN LINK
1[i]	wherein the movement of the first ottoman link controls adjustment of the footrest	The movement of the Living Style Barcalounger first ottoman link controls adjustment of the footrest assembly between the closed position and the extended position as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	assembly between the closed position and the extended position, and	 The photograph shows a mechanical assembly for a chair's footrest. A cylindrical motor tube is connected to a linkage system. The linkage includes a front ottoman link that pivots to move the footrest assembly between a closed and an extended position. The footrest assembly is shown in its extended position, resting on a carpeted floor. Labels with arrows point to the 'FRONT MOTOR TUBE', 'FRONT OTTOMAN LINK', and 'FOOTREST ASSEMBLY'.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		The front motor tube is connected at each end to the first ottoman link of each linkage mechanism. When the linear actuator moves forward during the first stroke, this exerts a force on the first ottoman links which adjusts the footrest assembly from the closed position to the extended position. CLOSED EXTENDED  
1[j]	wherein the second phase moves the seat-adjustment assembly between the extended position and the reclined position.	The second phase of the Living Style Barcalounger moves the seat-adjustment assembly between the extended position and the reclined position as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 When the linear actuator moves rearward during the second stroke, this moves the seat-adjustment assembly between the extended position and the reclined position.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		EXTENDED  RECLINED 
2	2. The seating unit of claim 1, further comprising an activator bar spanning the pair of linkage mechanisms.	The Living Style Barcalounger includes an activator bar (blue) spanning the pair of linkage mechanisms as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The photograph shows a complex mechanical assembly, likely a linear actuator. A blue line highlights a specific component, possibly a rocker arm or a linkage, which is part of the mechanism. The assembly includes various metal parts, bolts, and a coiled spring. The background is a plain, light-colored surface.
3[a]	3. The seating unit of claim 2, wherein the linear actuator comprises: a motor mechanism;	The Living Style Barcalounger linear actuator includes a motor mechanism as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
3[b]	a track operably coupled to the motor mechanism, wherein the track includes a first travel section and a second travel section;	The Living Style Barcalounger includes a track operably coupled to the motor mechanism, wherein the track (highlighted) includes a first travel section (blue) and a second travel section (orange) as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
3[c]	and a motor activator block that translates longitudinally along the track under automated control.	The Living Style Barcalounger includes a motor activator block (red) that translates longitudinally along the track under automated control as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The photograph shows a black metal frame assembly, likely for a vehicle seat or cargo area. A central component, the rocker mechanism, is highlighted with a red rectangle. This mechanism consists of two vertical black cylindrical components connected by a horizontal metal bar. The assembly is mounted on a frame with various bolts and structural supports. The background is a plain orange wall.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
4	4. The seating unit of claim 3, wherein a housing of the motor mechanism is pivotably coupled to a section between the pair of ends of the front motor tube.	The Living Style Barcalounger housing of the motor mechanism is pivotably coupled to a section between the pair of ends of the front motor tube as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 The image shows a close-up of a mechanical assembly, identified as a representative rocker with a representative rocker mechanism. The assembly features a dark, cylindrical component with a label that includes a CE mark and technical specifications. This component is connected to a metal frame that includes a central pivot point and a lever arm. The lever arm is attached to a horizontal bar, which is part of a larger mechanical structure. The background shows a dark, textured surface, possibly a chair seat or backrest, and a light-colored, textured surface, possibly a chair base or floor.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
5	5. The seating unit of claim 4, wherein the first phase involves longitudinal	The Living Style Barcalounger first phase involves longitudinal translation of the motor activator block along the first travel section that creates a lateral thrust at the front motor tube as shown below. When the Living Style Barcalounger is

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	translation of the motor activator block along the first travel section that creates a lateral thrust at the front motor tube.	in the closed position and the motor is activated, the motor activator block moves along the first travel section of the track, which creates a lateral force at the front motor tube that extends the ottoman. 

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		 FRONT MOTOR TUBE
6	6. The seating unit of claim 5, wherein, during the stroke of the linear actuator within the first phase, the motor mechanism moves forward and upward with respect to the pair of rocker mechanisms while the motor	The Living Style Barcalounger motor mechanism moves forward and upward with respect to the pair of rocker mechanisms while the motor activator block remains generally fixed in space during the stroke of the linear actuator in the first phase as shown below. In the first phase, the motor activator block remains generally fixed while the motor mechanism translates forward and upward within the chair, which extends the ottoman forward and upward.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism	
	activator block remains generally fixed in space.	CLOSED 	EXTENDED 

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		
7	7. The seating unit of claim 3, wherein the activator bar having a pair of ends, wherein one of the ends of the activator bar is rotatably coupled to a motor bellcrank	The Living Style Barcalounger activator bar has a pair of ends wherein one of the ends of the activator bar is rotatably coupled to a motor bellcrank within the seat-adjustment assembly via a motor pivot bracket as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	within the seat-adjustment assembly via a motor pivot bracket.	
15[p]	15. A pair of the generally mirror-image linkage mechanisms adapted to move a rocker recliner between a closed, an extended, and a reclined	The Carya Smart 5115 mechanism includes a pair of the generally mirror-image linkage mechanisms adapted to move a rocker recliner between a closed, an extended, and a reclined position, the rocker recliner having a pair of rocker mechanisms, a seat that is translatable with respect to the rocker mechanisms, and a backrest that is angularly adjustable with respect to the seat as shown below.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
	position, the rocker recliner having a pair of rocker mechanisms, a seat that is translatable with respect to the rocker mechanisms, and a backrest that is angularly adjustable with respect to the seat, each of the linkage mechanisms comprising:	 The Carya Smart 5115 mechanism has a pair of the generally mirror-image linkage mechanisms adapted to move a rocker recliner between a closed, an extended, and a reclined position.

Claim	U.S. Patent No. 8,398,165	Representative Rocker with Representative Rocker Mechanism
		CLOSED  EXTENDED  RECLINED  The Carya Smart 5115 mechanism includes rocker mechanisms, is configured to support a seat, and is configured to support a backrest.
