

Exhibit 11

Exemplary Covered Glider that Practices Ultra-Mek's U.S. Patent No. 8,297,693

Powered Glider-Recliner with the Leggett & Platt 5181 Mechanism

The following chart illustrates how an Exemplary Powered Glider-Recliner (the “Exemplary Covered Glider”) containing Leggett & Platt’s 5181 Mechanism (the “Exemplary Covered Glider Mechanism”) falls within the claim scope of U.S. Patent No. 8,297,693. The Exemplary Covered Glider and/or Exemplary Covered Glider Mechanism are exemplary products only and illustrate the practice of the above-referenced patent. The following chart contains highlighting, color-coding, and other annotations which are intended to assist the reader in identifying relevant elements, and are not intended to be binding or limiting. Complainants reserve the right to modify the structures associated with identified elements, to identify other functions for identified structures, and/or to adjust the identification of one or more components identified herein.

Complainants reserve the right to offer additional evidence to prove that the Exemplary Covered Glider(s) practice the claims below in their expert reports, and in motions and at trial. Complainants reserve the right to supplement, amend, or modify the foregoing based on new information that becomes available during discovery, the exchange of proposed claim constructions, and/or issuance of a claim construction order.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
1[p]	A seating unit, comprising:	The Exemplary Covered Glider is a seating unit.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 The Exemplary Covered Glider comprises a Leggett & Platt 5181 mechanism. 

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
1[a]	a base unit with a first bearing surface;	The Exemplary Covered Glider includes a base unit as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 The base unit includes multiple bearing surfaces including a first bearing surface on the upper portion of the base unit.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
1[b]	a generally horizontally-disposed seat positioned above the base unit;	The Exemplary Covered Glider includes a generally horizontally-disposed seat positioned above the base unit as shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
1[c]	a generally upright backrest positioned above the base unit and substantially rearward of the seat;	The Exemplary Covered Glider includes a generally upright backrest positioned above the base unit and substantially rearward of the seat as shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
1[d]	an extendable ottoman;	The Exemplary Covered Glider includes an extendable ottoman as shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
1[e]	a reclining mechanism attached to the seat, the backrest, the ottoman and the base unit, the reclining mechanism comprising a	The Exemplary Covered Glider includes a reclining mechanism attached to the seat, the backrest, the ottoman, and the base unit, as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	plurality of pivotally interconnected links;	 The plurality of pivotally interconnected links is shown above.
1[f]	a reciprocating mechanism attached to the base unit and the reclining mechanism, the reciprocating mechanism being configured to enable the seat, backrest and reclining mechanism to reciprocate relative to the base unit along a longitudinal path responsive	The Exemplary Covered Glider includes a reciprocating mechanism attached to the base unit and the reclining mechanism that is configured to enable the seat, backrest and reclining mechanism to reciprocate relative to the base unit along a longitudinal path responsive to a longitudinally-directed force shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	to a longitudinally-directed force; and	 The photograph shows a mechanical assembly, likely a glider mechanism, with several components labeled. A central horizontal bar is labeled 'GLIDE FOUNDATION PLATE'. Above it, a complex linkage system is labeled 'RECIPROCATING MECHANISM'. To the left, a link is labeled 'REAR GLIDE LINK', and to the right, a link is labeled 'FRONT GLIDE LINK'. The mechanism is mounted on a wooden surface, and a spring is visible on the right side. The reciprocating mechanism comprises at least the glide foundation plate and the front and rear glide links shown above.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 The photograph shows a complex mechanical assembly, which is a glider mechanism. It features a central horizontal actuator with a white and black body. Two yellow arrows are superimposed on the image, pointing left and right from the center of the actuator, indicating its range of motion. The mechanism is mounted on a black metal frame with various linkages, springs, and adjustment points. The entire assembly is set against a light brown, textured background.
1[g]	a linear actuating unit attached to the reclining mechanism, the linear actuating unit configured to move the	The Exemplary Covered Glider includes a linear actuating unit attached to the reclining mechanism that is configured to move the seating unit between an upright position, an intermediate TV position, and a fully reclined position. The linear actuating unit is shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	seating unit between (a) an upright position, in which the seat is generally horizontally disposed, the backrest is generally vertically disposed, and the ottoman is generally vertically disposed and positioned below the seat, (b) an intermediate TV position, in which the ottoman is generally horizontally disposed in front of the seat and the backrest and the seat substantially maintain the same relationship as they have in the upright position, and (c) a fully reclined position, in which the angle between the backrest and the seat increases;	 The photos below depict the three positions between which the Exemplary Covered Glider may be moved by the linear actuating unit.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		<u>Upright</u>  <u>Intermediate TV</u>  <u>Fully Reclined</u> 

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
1[h]	wherein the linear actuating unit includes opposed first and second ends, and wherein the first end of the linear actuating unit moves forwardly as the seating unit moves from the upright position to the TV position, and wherein the second end of the linear actuating unit moves rearwardly when the seating unit moves from the TV position to the fully reclined position.	The Exemplary Covered Glider's linear actuating unit includes opposed first and second ends where the first end of the linear actuating unit moves forwardly as the seating unit moves from the upright position to the TV position, and wherein the second end of the linear actuating unit moves rearwardly when the seating unit moves from the TV position to the fully reclined position. As shown below, the linear actuating unit includes opposed first and second ends. The mechanism below is in the upright position. 

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		When the chair moves from the upright to intermediate TV position, the first end moves forwardly as shown below.  When the chair moves from the intermediate TV position to the fully reclined position, the second end moves rearwardly as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
2	2. The seating unit defined in claim 1, wherein the reclining mechanism includes a pantographic linkage on which the ottoman is mounted, and wherein in the TV and fully reclined positions, pivots between links of the pantographic linkage form a near over-center arrangement that locks the ottoman in position.	The Exemplary Covered Glider's reclining mechanism includes a pantographic linkage on which the ottoman is mounted as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 When the Exemplary Covered Glider is in the intermediate TV and fully reclined positions, the ottoman is locked in place by the near over-center arrangement of pivots between the ottoman links.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
3	3. The seating unit defined in claim 1, further comprising a locking mechanism that allows the seating unit to reciprocate while in the upright position but prevents reciprocating of the seating	The Exemplary Covered Glider includes a locking mechanism that allows the seating unit to reciprocate while in the upright position but prevents reciprocating of the seating unit while in the TV and fully reclined positions as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	unit while in the TV and fully reclined positions.	UPRIGHT:  FULLY RECLINED: 
4	4. The seating unit defined in claim 1, wherein the linear actuating unit is attached to an actuating mechanism, the	The Exemplary Covered Glider's linear actuating unit (not labeled) is attached to an actuating mechanism, the actuating mechanism comprising a cross-member extending transversely across the seating unit, wherein the cross-member is pivotally attached to the actuating unit; and wherein the cross-

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	actuating mechanism comprising a cross-member extending transversely across the seating unit, wherein the cross-member is pivotally attached to the actuating unit; and wherein the cross-member is pivotally attached to a lower swing link of the reclining mechanism, the lower swing link being pivotally attached to an upper swing link of the reclining mechanism and to a mounting bracket that is attached to the reciprocating mechanism.	member is pivotally attached to a lower swing link of the reclining mechanism via an upper swing link of the reclining mechanism, the lower swing link being pivotally attached to the upper swing link and to a mounting bracket that is attached to the reciprocating mechanism, as shown below.  ACTUATING MECHANISM

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 The cross-member is attached to the actuating unit such that the cross-member and the actuating unit can pivot within the mechanism.
5	5. The seating unit defined in claim 4, wherein the upper swing link is pivotally attached with the backrest.	The Exemplary Covered Glider's upper swing link is pivotally attached with the backrest as shown in the image below. The upper swing link is pivotally connected to a coupling link that is pivotally connected to the backpost.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
6	6. The seating unit defined in claim 1, wherein the seat rises in moving from the TV position to the fully reclined position.	The Exemplary Covered Glider's seat rises in moving from the TV position to the fully reclined position as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		<u>Intermediate</u> <u>TV</u>  <u>Fully Reclined</u> 
7	7. The seating unit defined in claim 1, wherein the reclining mechanism includes a backpost that is fixed relative to the backrest, a mounting bracket that is fixed relative to the reciprocating mechanism	The Exemplary Covered Glider's reclining mechanism includes a backpost that is fixed relative to the backrest, a mounting bracket that is fixed relative to the reciprocating mechanism and pivotally attached to the backpost, and a seat adapter that is fixed relative to the seat and pivotally attached to the backpost as shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	and pivotally attached to the backpost, and a seat adapter that is fixed relative to the seat and pivotally attached to the backpost.	
11	11. The seating unit defined in claim 1, wherein the reciprocating mechanism is a gliding mechanism.	The Exemplary Covered Glider's reciprocating mechanism is a gliding mechanism as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 The gliding mechanism comprises at least the glide foundation plate and the front and rear glide links shown above.
12[p]	A reciprocating seating unit, comprising:	<i>See claim 1[p].</i>
12[a]	a base;	<i>See claim 1[a].</i>
12[b]	a generally horizontally-disposed seat positioned above the base;	<i>See claim 1[b].</i>
12[c]	a generally upright backrest positioned above the base and	<i>See claim 1[c].</i>

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	substantially rearward of the seat;	
12[d]	an extendable ottoman;	<i>See claim 1[d].</i>
12[e]	a reclining mechanism attached to the seat, the backrest, the ottoman and the base, the reclining mechanism comprising a plurality of pivotally interconnected links;	<i>See claim 1[e].</i>
12[f]	a reciprocating mechanism attached with the base unit and the reclining mechanism, the reciprocating mechanism configured to enable the seat, backrest and reclining mechanism to experience a longitudinally-directed reciprocating motion relative to the base unit; and	<i>See claim 1[f].</i>
12[g]	a linear actuator attached to the reclining mechanism, the linear actuator having first and second movable members, wherein the relative movement of the first and second movable members moves the chair between (a) an upright position, in which the seat is generally	The Exemplary Covered Glider includes a linear actuator attached to the reclining mechanism that has first and second movable members as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
	horizontally disposed, the backrest is generally vertically disposed, and the ottoman is generally vertically disposed and positioned below the seat, (b) an intermediate TV position, in which the ottoman is generally horizontally disposed in front of the seat and the backrest and the seat substantially maintain the same relationship as they have in the upright position, and (c) a fully reclined position, in which the angle between the backrest and the seat increases;	 The relative movement of the first and second movable members moves the chair between an upright position, an intermediate TV position, and a fully reclined position. The linear actuator is shown in the image above.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		The photos below depict the three positions between which the Exemplary Covered Glider may be moved by the linear actuator.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		<u>Upright</u>  <u>Intermediate TV</u>  <u>Fully Reclined</u> 

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		When the chair moves from the upright to intermediate TV position, the first movable member moves forwardly as shown below.  When the chair moves from the intermediate TV position to the fully reclined position, the second movable member moves rearwardly as shown below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
12[h]	wherein the reclining mechanism includes: a backpost that is fixed relative to the backrest; a mounting bracket that is attached to the second movable member of the linear actuator; a lower swing link that is attached to the mounting bracket; and an upper swing link that is pivotally attached to the lower swing link and to the backpost.	The Exemplary Covered Glider's reclining mechanism includes a backpost that is fixed relative to the backrest; a mounting bracket that is attached to the second movable member of the linear actuator; a lower swing link that is attached to the mounting bracket; and an upper swing link that is pivotally attached to the lower swing link and to the backpost (via a coupling link).

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
13	13. The seating unit defined in claim 12, further comprising a seat adapter that is fixed relative to the seat and directly pivotally attached to the backpost.	The Exemplary Covered Glider includes a seat adapter that is fixed relative to the seat and directly pivotally attached to the backpost as shown in the image below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		
14	14. The reciprocating seating unit defined in claim 13, wherein the reclining mechanism includes a pantographic linkage that extends the footrest in the TV and fully reclined positions, and wherein the pantographic linkage comprises upper and lower ottoman swing links that are directly pivotally attached to the seat adapter.	The Exemplary Covered Glider's reclining mechanism includes a pantographic linkage that extends the footrest in the TV and fully reclined positions, and wherein the pantographic linkage comprises upper and lower ottoman swing links that are directly pivotally attached to the seat adapter as shown in the images below.

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		

Claim	U.S. Patent No. 8,297,693	Exemplary Covered Glider with Exemplary Covered Glider Mechanism
		 A photograph of a mechanical glider assembly, likely for a chair or ottoman, set against a red wall and a beige carpet. The assembly consists of several black metal components. A label 'SEAT ADAPTER' with a blue arrow points to a component on the left. A label 'UPPER OTTOMAN SWING LINK' with a blue arrow points to a link in the upper right. A label 'LOWER OTTOMAN SWING LINK' with a blue arrow points to a link in the lower center. The mechanism appears to be a linkage system for moving a seat or ottoman.
