

**PUBLIC VERSION**

# Exhibit 23C

**REDACTED**

UNITED STATES INTERNATIONAL TRADE COMMISSION  
WASHINGTON, D.C.

**In the Matter of**

**Certain Powered Rocker-Recliner and  
Glider-Recliner Mechanisms and Seating  
Units Containing Same**

**Investigation No. 337-TA-\_\_\_\_\_**

**DECLARATION OF RICHARD WEEKS IN SUPPORT OF THE COMPLAINT  
OF ULTRA-MEK INC. AND LEGGETT AND PLATT INC. UNDER SECTION 337 OF  
THE TARIFF ACT OF 1930, AS AMENDED**

1. I, Richard Weeks, have personal knowledge of the facts set forth in this declaration or they are based upon information provided to me in the ordinary course of my business, and I believe all the facts stated below to be true. If called as a witness, I could competently testify to these facts. I hereby declare that:
2. I am the Vice President of Global Sales for home furniture at Leggett and Platt Incorporated (“L&P”). L&P’s Home Furniture Group (“HFG”) is within the company’s Furniture, Flooring, and Textile (“FFT”) segment. The HFG includes three product groups: recliner motion hardware, sleeper mechanisms and mattresses, and seating and applied products. I have been in this role for 5 years. In my role as Vice President of Global Sales for home furniture, I am familiar with these product platforms within the FFT segment, as well as the financial information regarding the products, activities, investments, costs, and employment discussed in this Declaration.
3. L&P is a Missouri company with its corporate headquarters located in Carthage, Missouri. The majority of our manufacturing facilities—61—are located in the United States. We currently have approximately 6500 employees in the United States.
4. I understand that two of the patents asserted in this Investigation—U.S. Patent Nos. 8,398,165 (the “165 Patent”) and 8,398,168 (the “168 Patent”) (collectively the “L&P Asserted Patents”) cover certain products including the Delta Rocker, the Delta Glider, the CZ Rocker, the CZ Glider, the BEST ROCKER, the BEST GLIDER, the EZ-Pro Rocker, and the EZ-Pro Glider, and seating units incorporating the same (the “L&P Domestic Industry Products”), respectively. L&P’s wholly owned subsidiary L&P Property Management Company is the owner of the L&P Asserted Patents.
5. I understand that the other two patents asserted in this Investigation—U.S. Patent Nos. 8,016,348 (the “348 patent”) and 8,297,693 (the “693 patent”) (collectively, the “UM

Asserted Patents”)—are owned by Ultra-Mek Incorporated (“Ultra-Mek”) and similarly cover the L&P Domestic Industry Products. Ultra-Mek has granted L&P a license to the ’348 patent and the ’693 patent.

6. I have been asked to describe L&P’s investments and activities in the United States relating to the Domestic Industry Products. As mentioned above, there are three product groups within the HFG (recliner motion hardware, sleeper mechanisms and mattresses, and seating and applied products). [REDACTED]
7. The Domestic Industry Products represent a premium product category within the broader recliner market because they provide consumers with effortless, motorized adjustment of seating position— [REDACTED]. Because of this desirable functionality, L&P’s powered rocker / glider recliners command a price premium over their non-powered counterparts. [REDACTED]
8. L&P’s investments and activities in the United States relating to the Domestic Industry Products include but are not limited to L&P’s research and development, engineering, assembly, manufacture of components, purchase of components and raw materials, repairs and replacements, field technical services, corporate risk department services, distribution, sales, marketing and other work and resources. L&P devotes significant and substantial labor, capital, and resources to the L&P Domestic Industry Products, and its investments include, among other things, investments in facilities, equipment, labor, purchases, [REDACTED], and expenses related to research, development, and engineering.
9. L&P made significant initial investments in the U.S. with respect to the design and development of the L&P Domestic Industry Products. This included investing in skilled personnel—engineers, designers, and production workers—as well as acquiring specialized equipment and tooling necessary to develop and manufacture powered reclining furniture. These initial, foundational investments in the U.S. remain central to L&P’s ongoing operations [REDACTED]
10. L&P’s research, development, and engineering work [REDACTED]

[REDACTED], performing research, development, and engineering work. As an example, L&P's engineering staff receive input and requests from customers regarding new features to integrate into the Domestic Industry Products and work on implementing such features into existing or new products, and also work to ensure the durability and safety of the Domestic Industry Products. Other examples of the work performed are the development of new Domestic Industry Products and using equipment such as lasers and stamp presses to [REDACTED]

[REDACTED] L&P's research, development, and engineering activities take place in multiple U.S. locations including facilities located in Mississippi, Tennessee, Kentucky, and North Carolina.

11. The portion of L&P's U.S. investments in compensation and equipment for these research, development, and engineering activities allocable to the L&P Domestic Industry Products in 2025, 2024, and 2023 were [REDACTED], respectively. L&P's U.S. investments in compensation and equipment for these research, development, and engineering activities allocable to the L&P Domestic Industry Products through June 2026 were [REDACTED].
12. In addition to the majority of the design and development being performed in the United States, some of the most significant parts of the production of the Domestic Industry Products also takes part in the United States. Rockers and gliders must be functional seating units and provide a place for customers to sit, and must support their weight when they do so. In fact, the Domestic Industry Products undergo rigorous design and quality testing and are rated to withstand 350 lbs. at 25,000 cycles to ensure safe and reliable operation. The ability of the seating units to rotate, recline, and glide is an essential part of their appeal to customers and indeed how the products are differentiated from more typical manually operated seating units. Many of the seat boxes, cross members, tubes, ring bases, and swivels that are included in the seat and that allow the products to rotate are manufactured in the United States. Using raw materials such as steel, L&P workers manufacture these components in the United States [REDACTED]. Many of the raw materials L&P uses, and many of the components used which L&P does not manufacture, are sourced from U.S. companies, providing further investments in the United States.
13. The costs to manufacture domestically produced components and to purchase domestically purchased parts and materials for the L&P Domestic Industry Products for 2025, 2024, and 2023 were [REDACTED]. The costs to manufacture domestically produced components and to purchase domestically purchased parts and materials for the L&P Domestic Industry Products through June 2026 were [REDACTED].
14. L&P operates a number of distribution centers in the United States, including the locations listed below in the next paragraph. At these centers, L&P employees [REDACTED], as well as warehouse products and components. In addition, many of these distribution centers have display space for customers to see samples of the Domestic

Industry Products. Many of the Domestic Industry Products are assembled in the United States, by both L&P and its wholesale customers. L&P's assembly work takes place in its distribution centers, which also help with quality control.

15. Approximately [REDACTED] employees at L&P's facilities in City of Industry, CA; Kendallville, IN; Leitchfield, KY; Tupelo, MS; High Point, NC; Conover, NC; and Cleveland, TN work on different aspects—manufacturing, receipt, assembly, and/or shipping—of the L&P Domestic Industry Products. These activities require a great deal of facility space. For example, in 2026 the portion of space allocable to work on the L&P Domestic Industry Products at these facilities is approximately [REDACTED] square feet of facility space used for the L&P Domestic Industry Products).
16. The portion of the facilities costs allocable to the L&P Domestic Industry Products in 2025, 2024, and 2023 were approximately [REDACTED]. The portion of the facilities costs allocable to the L&P Domestic Industry Products through June 2026 was [REDACTED].
17. In addition to the labor described above, L&P also offers field technical services for the L&P Domestic Industry Products in the United States. These field technicians work for the HFG. The HFG field technicians assist customers with the assembly of products and also investigate issues with respect to the L&P Domestic Industry Products. The technicians also perform other tasks relating to the L&P Domestic Industry Products, such as [REDACTED].
18. These combined labor costs allocable to the L&P Domestic Industry Products in 2025, 2024, and 2023 were approximately [REDACTED]. The combined labor costs allocable to the L&P Domestic Industry Products through June 2026 were [REDACTED].
19. The number of employees in U.S. that are directly involved in the manufacturing and assembly of the L&P Domestic Industry Products is approximately [REDACTED] employees. Overall, approximately [REDACTED] L&P employees work on the Domestic Industry Products. This is approximately [REDACTED].
20. L&P maintains components for repairs and/or replacements related to the L&P Domestic Industry Products in warehouses in the United States. L&P's main replacement warehouses are located in California and High Point, NC, although all locations maintain replacement parts related to the L&P Domestic Industry Products. L&P also maintains inventory of the L&P Domestic Industry Products in distribution centers for some customers.
21. The patent royalties paid to Ultra-Mek for the L&P Domestic Industry Products in 2025, 2024, and 2023 were [REDACTED]. The patent royalties

paid to Ultra-Mek for the L&P Domestic Industry Products through June of 2026 were

22. The table below summarizes the data above for costs and investments in the United States for the L&P Domestic Industry Products:

|                                                          | 2026<br>(through<br>June) | (through<br>2025 | 2024 | 2023 |
|----------------------------------------------------------|---------------------------|------------------|------|------|
| <b>R&amp;D Costs</b>                                     |                           |                  |      |      |
| <b>Facilities Costs</b>                                  |                           |                  |      |      |
| <b>Labor Costs</b>                                       |                           |                  |      |      |
| <b>Component<br/>Costs</b>                               |                           |                  |      |      |
