

EXHIBIT 29

(Public Version)

Ex. 29C – Domestic Industry Claim Chart
U.S. Patent No. 12,298,394 (“the ’394 patent”)

trinamiX GmbH (“trinamiX”) hereby identifies evidence demonstrating the following trinamiX products practice the ’394 Patent: all trinamiX products that include trinamiX Face Authentication functionality, including but not limited to e.g., the trinamiX Face Authentication SDK, ET-90 demonstrator, Cockatiel demonstrator, and MPIC2.0 (collectively, the “Practicing ’394 Products”). These products are made by trinamiX, and are imported, sold for importation, and/or sold within the United States after importation by trinamiX. The chart below is based on evidence of representative products of the Practicing ’394 Products. Each of the following limitations is met literally, and, to the extent a limitation is not met literally, it is met under the doctrine of equivalents.

The trinamiX products identified in this chart are representative of all relevant trinamiX products containing relevant components practicing the patent. The same or similar analysis as discussed below apply to all relevant trinamiX products containing relevant components practicing the patent because, for example, the cameras, sensors, and software operate similarly within each device, and each corresponding device has the same or similar components, features, functions, and/or characteristics. This will further be confirmed through expert discovery.

Claim 1	Practicing ’394 Products
[1pre] A system, comprising:	To the extent the preamble is limiting, the Practicing ’394 Products comprise a system. For example, each of the Practicing ’394 Products is a system:

[1a] a structured light projector configured to emit a plurality of light beams, arranged in a first spatial arrangement relative to each other, towards an object;	The Practicing ’394 Products comprise a structured light projector configured to emit a plurality of light beams, arranged in a first spatial arrangement relative to each other, towards an object. The Practicing ’394 Products comprise a dot projector and flood projector configured to emit a plurality of light beams that are arranged in a spatial arrangement relative to each other:

U.S. Patent No. 12,298,394 (“the ’394 patent”)

	
[1b] a semiconductor detector configured to receive a light reflective from the object and output an image characterizing an intensity of the reflective light, the semiconductor detector sensitive to light;	The Practicing '394 Products comprise a semiconductor detector that is configured to receive a light reflective from the object and output an image characterizing an intensity of the reflective light, the semiconductor detector sensitive to light. The Practicing '394 Products comprise a NIR camera containing a semiconductor detector that receives reflective light and outputs images characterizing an intensity of the light:
